The Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) certification is a valuable credential that every Salesforce professional should earn it. The Mule-Dev-202 certification exam offers a great opportunity for beginners and experienced professionals to demonstrate their expertise. With the Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) certification exam everyone can upgrade their skills and knowledge. There are other several benefits that the Salesforce Mule-Dev-202 exam holders can achieve after the success of the Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) certification exam.

You can free download Salesforce Mule-Dev-202 exam demo to have a try before you purchase Mule-Dev-202 complete dumps. Instant download for Mule-Dev-202 trustworthy Exam Torrent is the superiority we provide for you as soon as you purchase. We ensure that our Mule-Dev-202 practice torrent is the latest and updated which can ensure you pass with high scores. Besides, Our 24/7 customer service will solve your problem, if you have any questions.

Test Mule-Dev-202 Centres & Mule-Dev-202 Study Demo

Have you ever noticed that people who prepare themselves for Salesforce Mule-Dev-202 certification exam do not need to negotiate their salaries for a higher level, they just get it after they are Salesforce Mule-Dev-202 Certified? The reason behind this fact is that they are considered the most deserving candidates for that particular job.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q60-Q65):

NEW QUESTION # 60

Northern Trail Outfitters (NTO) has outgrown its custom Extract-Transform-Load (ETL) solution and needs to migrate its ETL jobs to a new tool. One of the requirements is a single interface to view and manage the ETL jobs. Some of these ETL jobs interact with systems that are hosted on-premises.

According to Salesforce's hyperautomation best practices, how should Salesforce's various hyperautomation solutions be combined to meet NTO's requirements?

- A. Migrate all integrations to MuleSoft Composer. Use the Salesforce UI to view all MuleSoft Composer integrations. Leverage MuleSoft RPA for on-premises systems.
- B. Use External Services in Salesforce to connect with Anypoint Platform. Use Orchestrator to coordinate the different ETL jobs in a single UI. Leverage MuleSoft RPA for on-premises systems.
- **C. Migrate integrations with simple transformations to MuleSoft Composer and complex integrations to Anypoint Platform. Use Anypoint Exchange to view and manage all API integrations.**
- D. Implement a three-tier API-led strategy to migrate its ETL jobs to a new tool. Use Anypoint API Manager to view and manage all API integrations.

Answer: C

Explanation:

To meet NTO's requirements of migrating ETL jobs and managing them efficiently, the following approach is recommended:

Migrate Simple Integrations to MuleSoft Composer:

MuleSoft Composer is suitable for simple transformations and straightforward data integrations that do not require complex logic or custom coding. This allows non-technical users to manage and automate these processes easily.

Migrate Complex Integrations to Anypoint Platform:

For more complex integrations that involve intricate business logic, large data volumes, or require advanced features like error handling, use Anypoint Platform. Anypoint Platform provides robust capabilities for building, deploying, and managing APIs and integrations.

Use Anypoint Exchange:

Anypoint Exchange serves as a centralized repository for all API assets, including those created using Composer and Anypoint Platform. It provides a single interface to view, manage, and share API integrations.

This approach leverages the strengths of both tools and ensures that all API integrations are efficiently managed and monitored.

NEW QUESTION # 61

AnyAirlines is developing an RPA process and is implementing testing best practices. They want to take the RPA process through rigorous testing.

During these tests, where do RPA process test plans execute?

- **A. On a configured RPA Bot**
- B. In an RPA process runtime
- C. In RPA Manager
- D. In RPA Builder

Answer: A

Explanation:

During testing of an RPA process, test plans are executed on a configured RPA Bot. This allows you to simulate real-world scenarios and ensure the RPA process works correctly under various conditions:

On a Configured RPA Bot:

RPA Bots are configured to execute the automated tasks defined in the RPA process. By running test plans on these bots, you can verify the functionality and performance of the RPA process.

This approach ensures that the RPA process is thoroughly tested in an environment that closely mirrors production conditions.

NEW QUESTION # 62

Northern Trail Outfitters is building a hyperautomation solution using Salesforce and MuleSoft. They need to use Salesforce Flow to automate a multi-departmental process in an external system and capture the outcome in Salesforce.

How should the Salesforce Flow solution be structured to meet this requirement?

- A. An evaluation flow which evaluates when the process is completed and updates Salesforce records
- **B. A Flow Orchestration to automate the multi-departmental process and update Salesforce records**
- C. Parent and subflows invoked by REST API to capture user inputs and update Salesforce records
- D. An autolaunched flow invoked by REST API to update Salesforce after the process is completed

Answer: B

Explanation:

Salesforce Flow Orchestration is designed to manage complex, multi-step business processes that span multiple departments and systems. Here's how it can be structured to meet the requirement:

Automate Multi-Departmental Process:

Use Flow Orchestration to define and manage the steps involved in the multi-departmental process. It allows you to break down the process into stages and define the sequence of actions and approvals required.

Capture Outcome in Salesforce:

After completing the external process, Flow Orchestration can be configured to update Salesforce records with the outcome. This ensures that the results of the automated process are reflected within Salesforce.

Orchestration Capabilities:

Salesforce Flow Orchestration provides features such as task assignments, decision elements, and complex branching logic, which are ideal for managing multi-departmental workflows.

NEW QUESTION # 63

Northern Trail Outfitters developed an integration between its two Salesforce orgs using MuleSoft Composer.

Which two actions should be taken before testing the Composer flow? (Choose two.)

- A. Ensure the credentials to the target production org are still valid.
- B. Ensure MuleSoft Composer is installed on both the source and target orgs.
- **C. Ensure the flow trigger is connected to a sandbox instance of Salesforce.**
- **D. Ensure action steps are connected to a sandbox instance of Salesforce.**

Answer: C,D

NEW QUESTION # 64

A Salesforce admin for AnyAirlines constructs a MuleSoft Composer flow that retrieves a record based on a unique ID using the Get Records action from a Salesforce connector. They will use the result to send a Slack message.

How can they achieve this task?

- A. 1. Add a For Each loop after the Salesforce action step iterating over the collection of Salesforce records. 2. Use a Slack action step to construct the messages from the record being processed.
- **B. 1. Add a Slack action step after the Salesforce action step. 2. Use the record to construct the message.**
- C. 1. Add an If/Else Block after the Salesforce action step, which contains a branch checking if the Salesforce action step

returned exactly one record.2. In the branch, add a Slack action step and use the record to construct the message.

- D. 1. Add a Slack action step after the Salesforce action step.2. Use the first record from the collection of Salesforce records to construct the message.

Answer: B

Explanation:

Salesforce Action Step:Start by adding a Salesforce action step that uses the Get Records action to retrieve the record based on a unique ID. This action retrieves the specific record needed.

Reference:MuleSoft Composer Salesforce Connector

Add Slack Action Step:After retrieving the record, add a Slack action step. This step will be used to send the message to Slack.

Reference:MuleSoft Composer Slack Connector

Use the Record:Use the retrieved record directly to construct the message in the Slack action step. This ensures the message contains the relevant information from the Salesforce record.

Reference:Building Messages in Composer

No Need for Collection Handling:Since the Get Records action retrieves a single record based on a unique ID, there is no need to handle collections or iterate through records.

Reference:Get Records Action

NEW QUESTION # 65

.....

Whether you are good at learning or not, passing the exam can be a very simple and enjoyable matter together with our Mule-Dev-202 practice engine. As a professional multinational company, we fully take into account the needs of each user when developing our Mule-Dev-202 Exam Braindumps. For example, in order to make every customer can purchase at ease, our Mule-Dev-202 preparation quiz will provide users with three different versions for free trial, corresponding to the three official versions.
