With the development of the times, the pace of the society is getting faster and faster. If we don't try to improve our value, we're likely to be eliminated by society. Under the circumstances, we must find ways to prove our abilities. For example, getting the SC-100 Certification is a good way. If we had it, the chances of getting a good job would be greatly improved. However, obtaining the SC-100 certification is not an easy task.

Microsoft SC-100 exam is a valuable certification for individuals who want to start their career in cybersecurity architecture. It provides a solid foundation for professionals to build upon and helps them gain the skills and knowledge required to design and implement effective cybersecurity solutions.

Microsoft SC-100 exam covers a wide range of topics related to cybersecurity, including threat management, identity and access management, security operations, and data and application protection. SC-100 Exam is designed to evaluate the candidate's ability to design and implement secure solutions using Microsoft technologies such as Azure, Microsoft 365, and Windows 10.

Our experts offer help by diligently working on the content of SC-100 learning questions more and more accurate. Being an exam candidate in this area, we believe after passing the exam by the help of our SC-100 practice materials, you will only learn a lot from this SC-100 Exam but can handle many problems emerging in a long run. You can much more benefited form our SC-100 study guide. Don't hesitate, it is worthy to purchase!

Microsoft SC-100 (Microsoft Cybersecurity Architect) Certification Exam is an important certification for cybersecurity professionals who wish to demonstrate their expertise in securing Microsoft technologies and protecting against today's sophisticated cyber threats. SC-100 exam covers a range of topics, including security concepts, threat management, identity, access management, platform protection, data and application protection, and governance, risk management, and compliance. Candidates who pass the exam will demonstrate the skills and knowledge required to design and implement secure solutions using Microsoft technologies.

Microsoft Cybersecurity Architect Sample Questions (Q147-Q152):

NEW QUESTION # 147

You have an Azure subscription. The subscription contains an Azure application gateway that use Azure Web Application Firewall (WAF).

You deploy new Azure App Services web apps. Each app is registered automatically in the DNS domain of your company and accessible from the Internet.

You need to recommend a security solution that meets the following requirements:

- * Detects vulnerability scans of the apps
- * Detects whether newly deployed apps are vulnerable to attack

What should you recommend using? To answer, select the appropriate options in the answer area. NOTE:

Each correct selection is worth one point.

Answer Area

To detect vulnerability scans of the apps: Microsoft Defender for App Service

To detect whether newly deployed apps are vulnerable to attack: Microsoft Defender for App Service

Answer:

Explanation:

Answer Area

To detect vulnerability scans of the apps: Microsoft Defender for App Service

To detect whether newly deployed apps are vulnerable to attack: Microsoft Defender for App Service

Explanation:

Answer Area

To detect vulnerability scans of the apps: Microsoft Defender for App Service

To detect whether newly deployed apps are vulnerable to attack: Microsoft Defender for App Service

NEW QUESTION # 148

You have Microsoft Defender for Cloud assigned to Azure management groups.

You have a Microsoft Sentinel deployment.

During the triage of alerts, you require additional information about the security events, including suggestions for remediation. Which two components can you use to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Microsoft Sentinel threat intelligence workbooks

- B. workload protections in Defender for Cloud
- **C. threat intelligence reports in Defender for Cloud**
- D. Microsoft Sentinel notebooks

Answer: A,C

Explanation:

<https://docs.microsoft.com/en-us/azure/sentinel/understand-threat-intelligence> <https://docs.microsoft.com/en-us/azure/defender-for-cloud/defender-for-cloud-introduction> <https://docs.microsoft.com/en-us/azure/defender-for-cloud/threat-intelligence-reports> <https://docs.microsoft.com/en-us/azure/sentinel/notebooks>

NEW QUESTION # 149

You are creating the security recommendations for an Azure App Service web app named App1.

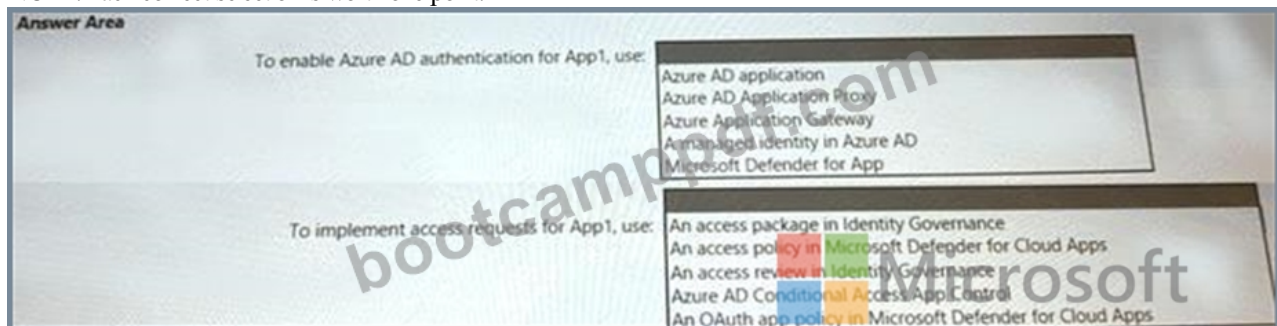

App1 has the following specifications:

- * Users will request access to App1 through the My Apps portal. A human resources manager will approve the requests.
- * Users will authenticate by using Azure Active Directory (Azure AD) user accounts.

You need to recommend an access security architecture for App1.

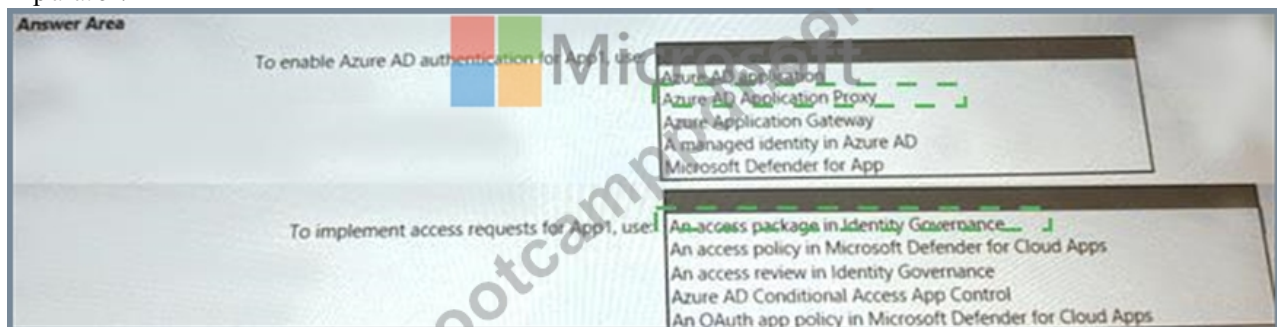

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 150

Your company has a Microsoft 365 subscription and uses Microsoft Defender for Identity. You are informed about incidents that relate to compromised identities.

You need to recommend a solution to expose several accounts for attackers to exploit. When the attackers attempt to exploit the accounts, an alert must be triggered. Which Defender for Identity feature should you include in the recommendation?

- **A. custom user tags**
- B. honeypot entity tags
- C. standalone sensors
- D. sensitivity labels

Answer: A

NEW QUESTION # 151

You need to recommend an identity security solution for the Azure AD tenant of Litware. The solution must meet the identity requirements and the regulatory compliance requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

For the delegated management of users and groups, use:

- AD DS organizational units
- Azure AD administrative units
- Custom Azure AD roles

To ensure that you can perform leaked credential detection:

- Enable password hash synchronization in the Azure AD Connect deployment
- Enable Security defaults in the Azure AD tenant of Litware
- Replace pass-through authentication with Active Directory Federation Services

Answer:

Explanation:

Answer Area

For the delegated management of users and groups, use:

- AD DS organizational units
- Azure AD administrative units
- Custom Azure AD roles

To ensure that you can perform leaked credential detection:

- Enable password hash synchronization in the Azure AD Connect deployment
- Enable Security defaults in the Azure AD tenant of Litware
- Replace pass-through authentication with Active Directory Federation Services

Explanation:

For the delegated management of users and groups, use:

Azure AD administrative units

To ensure that you can perform leaked credential detection:

Enable password hash synchronization in the Azure AD Connect deployment
