

# Free PDF DP-300 - Administering Relational Databases on Microsoft Azure—High-quality Instant Access

2026 Latest Itexamguide DP-300 PDF Dumps and DP-300 Exam Engine Free Share: <https://drive.google.com/open?id=1zQ9I7ukr26ZWVO4UZdiyZFy9q2kNCgXI>

You can hardly grow by relying on your own closed doors. Our DP-300 preparation materials are very willing to accompany you through this difficult journey. You know, choosing a good product can save you a lot of time. And choose our DP-300 exam questions will save more for our DP-300 learning guide is carefully compiled by the professional experts who have been in this career for over ten years. So our DP-300 practice braindumps contain all the information you need.

Microsoft DP-300: Administering Relational Databases on Microsoft Azure is a certification exam that validates your skills in administering relational databases on Azure. DP-300 exam is designed for database administrators who are responsible for managing and maintaining databases on the Azure platform. DP-300 Exam measures your ability to design, implement, and maintain databases on Azure, as well as your knowledge of Azure security, backup, and recovery mechanisms.

## Microsoft - DP-300 –The Best Instant Access

Each question presents the key information to the learners and each answer provides the detailed explanation and verification by the senior experts. The success of our DP-300 study materials cannot be separated from their painstaking efforts. Our system will do an all-around statistics of the sales volume of our DP-300 Study Materials at home and abroad and our clients' positive feedback rate of our DP-300 study materials. Our system will deal with the clients' online consultation and refund issues promptly and efficiently. So our system is great.

## Exam DP-300: Administering Relational Databases on Microsoft Azure

Candidates for this exam are database administrators and data management specialists that manage on-premises and cloud relational databases built with Microsoft SQL Server and Microsoft Azure Data Services.

The Azure Database Administrator implements and manages the operational aspects of cloud-native and hybrid data platform solutions built on Azure Data Services and SQL Server. The Azure Database Administrator uses a variety of methods and tools to perform day-to-day operations, including applying knowledge of using T-SQL for administrative management purposes.

This role is responsible for management, availability, security and performance monitoring and optimization of modern relational database solutions. This role works with the Azure Data Engineer role to manage operational aspects of data platform solutions.

Candidates for this role should understand all concepts covered in Exam DP-900: Microsoft Azure Data Fundamentals.

**Part of the requirements for:** Microsoft Certified: Azure Database Administrator Associate

Download exam skills outline

The DP-300 Exam covers a wide range of topics related to managing and maintaining databases on Microsoft Azure. These topics include designing and implementing Azure SQL database, managing and monitoring Azure SQL database resources, configuring security for Azure SQL database, and performing disaster recovery for Azure SQL database. To pass the exam, candidates must demonstrate their proficiency in these areas and their ability to use Azure tools and services to administer relational databases.

### Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q212-Q217):

#### NEW QUESTION # 212

You have an Azure Active Directory (Azure AD) tenant named contoso.com that contains a user named user1@contoso.com and an Azure SQL managed instance named SQLMI1.

You need to ensure that user1@contoso.com can create logins in SQLMI1 that map to Azure AD service principals.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

Explanation:

- 1 - Grant SQLMI1 read access to Azure AD.
- 2 - Run CREATE LOGIN user1@contoso.com,,,,
- 3 - Run ALTER SERVER ROLE ,,,,

Reference:

<https://docs.microsoft.com/en-us/azure/azure-sql/managed-instance/aad-security-configure-tutorial>

#### NEW QUESTION # 213

You configure version control for an Azure Data Factory instance as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/data-factory/source-control>

#### NEW QUESTION # 214

DRAG DROP

You have a new Azure SQL database named DB1 on an Azure SQL server named AzSQL1.

The only user who was created is the server administrator.

You need to create a contained database user in DB1 who will use Azure Active Directory (Azure AD) for authentication.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

**Answer:**

Explanation:

Section: [none]

Explanation:

Step 1: Set up the Active Directory Admin for AzSQL1.

Step 2: Connect to DB1 by using the server administrator.

Sign into your managed instance with an Azure AD login granted with the sysadmin role.

Step 3: Create a user by using the FROM EXTERNAL PROVIDER clause.

FROM EXTERNAL PROVIDER is available for creating server-level Azure AD logins in SQL Database managed instance. Azure AD logins allow database-level Azure AD principals to be mapped to server-level Azure AD logins. To create an Azure AD user from an Azure AD login use the following syntax:

CREATE USER [AAD\_principal] FROM LOGIN [Azure AD login]

Reference:

<https://docs.microsoft.com/en-us/sql/t-sql/statements/create-user-transact-sql>

#### NEW QUESTION # 215

You have an on-premises Microsoft SQL Server 2019 instance named SQL1 that hosts a database named db1. You have an Azure subscription that contains an Azure SQL managed instance named MI1 and an Azure Storage account named storage1.

You need to ensure that you can back up db1 to storage1. The solution must meet the following requirements:

\* Use block blob storage.

\* Maximize security.

- A. Enable infrastructure encryption.
- B. Rotate the storage keys
- C. Create an access policy.
- D. Generate a shared access signature (SAS)

**Answer: A**

#### NEW QUESTION # 216

You have a version-8.0 Azure Database for MySQL database.

You need to identify which database queries consume the most resources.

Which tool should you use?

- A. Metrics
- B. Query Store
- C. Query Performance Insight
- D. Alerts

**Answer: B**

Explanation:

Explanation

The Query Store feature in Azure Database for MySQL provides a way to track query performance over time.

Query Store simplifies performance troubleshooting by helping you quickly find the longest running and most resource-intensive queries. Query Store automatically captures a history of queries and runtime statistics, and it retains them for your review. It separates data by time windows so that you can see database usage patterns.

Data for all users, databases, and queries is stored in the mysql schema database in the Azure Database for MySQL instance.

Reference:

<https://docs.microsoft.com/en-us/azure/mysql/concepts-query-store>
