ValidTorrent Microsoft GH-900 Exam Study Material: Your Ultimate Guide

Compared with those uninformed exam candidates who do not have effective preparing guide like our GH-900 study braindumps, you have already won than them. Among wide array of choices, our products are absolutely perfect. Besides, from economic perspective, our GH-900 Real Questions are priced reasonably so we made a balance between delivering satisfaction to customers and doing our own jobs. So in this critical moment, our GH-900 prep guide will make you satisfied.

Microsoft GitHub Foundations Sample Questions (Q78-Q83):

NEW QUESTION # 78

Which of the following is the recommended primary method by GitHub for configuring Two-Factor Authentication (2FA) on your account?

- A. Email-based verification
- B. SMS text messages
- C. Time-based one-time password (TOTP) applicationright
- D. GitHub security alerts

Answer: C

Explanation:

GitHub recommends using a TOTP authentication app, such as Google Authenticator or Authy, as the primary method for Two-Factor Authentication (2FA) because it provides stronger security than SMS-based authentication. TOTP generates time-sensitive one-time codes that are used alongside your password to verify your identity, helping protect your account from unauthorized access.

Option B is CORRECT because GitHub strongly recommends using a TOTP app (such as Google Authenticator, Authy, or 1Password) for 2FA due to its higher reliability and security compared to SMS.

Reference:

<https://docs.github.com/en/authentication/securing-your-account-with-two-factor-authentication-2fa/configuring-two-factor-authentication>

NEW QUESTION # 79

What is the purpose of GitHub Sponsors?

- A. It allows the developer community to financially support open source projects.
- B. It provides a channel for GitHub to support open source projects.
- C. It funds the most popular open source projects based on stars.
- D. It offers a way for companies to purchase software on GitHub.

Answer: A

Explanation:

GitHub Sponsors is a program designed to provide a platform for developers and companies to financially support open-source projects and their maintainers.

* Financial Support for Open Source Projects:

* Option D is correct because the main purpose of GitHub Sponsors is to allow members of the developer community, including individuals and organizations, to financially support open-source projects and maintainers. This helps sustain open-source development by providing developers with the resources they need to continue their work.

* Incorrect Options:

* Option A is incorrect because GitHub Sponsors is not based on project popularity (e.g., stars); it is based on voluntary contributions.

* Option B is incorrect because while GitHub provides the platform, the purpose of GitHub Sponsors is not for GitHub itself to fund projects, but to enable the broader community to do so.

* Option C is incorrect because GitHub Sponsors is not a marketplace for purchasing software but a platform for supporting developers.

NEW QUESTION # 80

Your team uses GitHub to track both development progress and issue resolution. You are working on a bug fix and have created a pull request for it. Your tech lead reminds you to link the PR to the corresponding issue so it's automatically closed once the PR is merged. Which TWO valid methods can you use to link a pull request to an issue? (Choose two.)

- A. Navigate to the "Development" section of the PR and manually link the issue from a dropdownright
- B. Mention the issue number in the PR title (e.g., Bug fix for #45)
- C. Use a keyword like fixes #45 or resolves #45 in the PR description or commentright
- D. Tag the issue with a linked label in the issue discussion

Answer: A,C

Explanation:

To ensure the pull request automatically closes the related issue upon merging, you can use a keyword like "fixes #45" or "resolves #45" in the PR description or comment, or manually link the issue through the "Development" section of the pull request. These methods properly associate the issue with the PR, making tracking and resolution seamless.

Option B is CORRECT because using supported keywords like fixes, closes, or resolves, followed by the issue number in the PR description or comments, will automatically close the issue when the PR is merged.

Option C is CORRECT because GitHub allows you to manually link up to ten issues by going to the pull request's "Development" section and selecting the issues to associate.

<https://docs.github.com/en/issues/tracking-your-work-with-issues/using-issues/linking-a-pull-request-to-an-issue>

NEW QUESTION # 81

Which of the following is an Innersource development practice?

- A. Removing open source code from the organization
- B. Making all repositories publicly accessible
- C. Adopting open source code into the organization
- D. Sharing code between teams within the organization

Answer: D

Explanation:

Innersource is a development practice where an organization adopts open-source development methodologies within its own internal environment. The primary goal of innersource is to break down silos and encourage collaboration across different teams within the organization.

Sharing Code Between Teams:

Option B is correct because innersource involves sharing code between teams within the organization, similar to how open-source communities share code across the public domain. This practice fosters collaboration, improves code quality, and allows for reuse of code, reducing duplication of efforts.

Incorrect Options:

Option A is incorrect because adopting open-source code into the organization is related to using open-source software, not specifically to innersource practices.

Option C is incorrect because removing open-source code from the organization is contrary to the principles of both open source and innersource.

Option D is incorrect because making all repositories publicly accessible refers to open source, not innersource. Innersource typically involves keeping code internal to the organization.

NEW QUESTION # 82

Which Insights feature allows users to view repository activity including: pull requests, issues, and commit history?

- A. Code frequency
- B. Traffic
- C. Pulse
- D. Activity overview

Answer: C

Explanation:

Using Pulse to view a summary of repository activity

You can use Pulse to see an overview of a repository's pull request, issue, and commit activity.

You can view an overview of a repository's activity through Pulse. Pulse includes a list of open and merged pull requests, open and closed issues, and a graph showing the commit activity for the top 15 users who committed to the default branch of the project in the selected time period.

Reference:

<https://docs.github.com/en/repositories/viewing-activity-and-data-for-your-repository/using-pulse-to-view-a-summary-of-repository-activity>

NEW QUESTION # 83

.....

Users don't need to install any plugins or software to attempt the Microsoft GH-900 practice exam. All operating systems support this format.
