

ISTQB-CTFL Reliable Test Answers - ISTQB ISTQB-CTFL Exam Discount Voucher: ISTQB Certified Tester Foundation Level (CTFL v4.0) Pass for Sure

ISTQB CTFL Certification Exam Sample Questions

01. Which of the following is a project risk?

- a) Skill and staff shortages
- b) Poor software characteristics (e.g. usability)
- c) Failure-prone software delivered
- d) Possible reliability defect (bug) - answer:

a) Skill and staff shortages

02. Which of these tasks would you expect to be performed during the Test Analysis and Design phase of the Fundamental Test Process?

- a) Defining test objectives
- b) Reviewing the test basis
- c) Creating test suites from test procedures
- d) Analyzing lessons learned for process improvement - answerAnswer:

b) Reviewing the test basis

03. As a test manager, you are asked for a test summary report. Concerning test activities, and according to the IEEE 829 Standard, what should be the MOST important information to include in your report?

- a) The number of test cases executed and their results,
- b) An overview of the major testing activities, events and the status with respect to meeting goals
- c) Overall evaluation of each development work item
- d) Training taken by members of the test team to support the test effort - answerAnswer:

b) An overview of the major testing activities, events and the status with respect to meeting goals

04. Which of the following statements BEST describes non-functional testing?

- a) Non-functional testing is the process of testing an integrated system to verify that it meets specified requirements.
- b) Non-functional testing is the process of testing to determine system compliance with coding standards.

P.S. Free & New ISTQB-CTFL dumps are available on Google Drive shared by Prep4King: https://drive.google.com/open?id=1_DR0qFaEMxFrH3Q0G4PzwAgNOqH4ZyIm

Just choose the right Prep4King ISTQB ISTQB-CTFL exam questions format demo and download it quickly. Download the ISTQB ISTQB-CTFL exam questions demo now and check the top features of ISTQB ISTQB-CTFL Exam Questions. If you think the ISTQB ISTQB-CTFL exam dumps can work for you then take your buying decision. Best of luck in exams and career!!!

What is more, we have free demos are freebies for your information. In case you are tentative about their quality, we give these demos form which you could get the brief outline and questions closely related with the ISTQB-CTFL practice materials. Only by practising them on a regular base, you will see clear progress happened on you. Besides, rather than waiting for the gain of our ISTQB-CTFL practice materials, you can download them immediately after paying for it, so just begin your journey toward success now.

ISTQB-CTFL Exam Discount Voucher & ISTQB-CTFL Latest Study Questions

Our ISTQB-CTFL questions pdf is up to date, and we provide user-friendly ISTQB-CTFL practice test software for the ISTQB Certified Tester Foundation Level (CTFL v4.0) exam. Moreover, we are also providing money back guarantee on all of ISTQB Certified Tester Foundation Level (CTFL v4.0) test products. If the ISTQB-CTFL braindumps products fail to deliver as promised, then you can get your money back. The ISTQB-CTFL Sample Questions include all the files you need to prepare for the ISTQB ISTQB-CTFL exam. With the help of the ISTQB-CTFL practice exam questions and test software, you will be able to feel the real ISTQB-CTFL exam scenario, and it will allow you to assess your skills.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q95-Q100):

NEW QUESTION # 95

Which of the following statements about Experience Based Techniques (EBT) is correct?

- A. EBT is done as a second stage of testing, after non-experienced-based testing took place.
- B. EBT require broad and deep knowledge in testing but not necessarily in the application or technological domain.
- **C. EBT use tests derived from the test engineers' previous experience with similar technologies.**
- D. EBT is based on the ability of the test engineer to implement various testing techniques.

Answer: C

Explanation:

Experience based techniques (EBT) are techniques that use the knowledge, intuition and skills of the test engineers to design and execute tests. EBT use tests derived from the test engineers' previous experience with similar technologies, domains, applications or systems. EBT are not based on the ability of the test engineer to implement various testing techniques, but rather on their personal judgment and creativity. EBT are not done as a second stage of testing, after non-experience-based testing took place, but rather as a complementary or alternative approach to other techniques. EBT require broad and deep knowledge in both testing and the application or technological domain, as this can help the test engineer identify potential risks, scenarios or defects. NEW QUESTION # 96

Select the roles required in a formal review:

- A. Author, Tester, Facilitator, Review Leader, Reviewers, Scribe
- B. Author, Developer, Facilitator, Review Leader, Reviewers, Scribe
- C. Author, Business analyst, Facilitator, Review Leader, Reviewers, Scribe
- **D. Author, Management, Facilitator, Review Leader, Reviewers, Scribe**

Answer: D

Explanation:

In a formal review, the roles involved typically include the author, management, facilitator (also known as moderator), review leader, reviewers, and scribe. Each role has specific responsibilities to ensure the effectiveness and efficiency of the review process:

- * The author creates and refines the work product being reviewed.
- * Management allocates resources and supports the review process.
- * The facilitator manages the review meeting, ensuring it proceeds smoothly.
- * The review leader plans the review and ensures it meets its objectives.
- * Reviewers examine the work product to identify defects.
- * The scribe records issues raised during the review meeting.

NEW QUESTION # 97

Which of the following would be a key difference between a peer review of code and static analysis of code using a tool?

- A. A peer reviews finds defects while static analysis finds failures.
- **B. Static analysis targets the code technically whereas Peer review is applicable to further aspects.**
- C. Peer reviews cannot find missing requirements whereas static analysis can
- D. A peer reviews find failures while static analysis finds defects.

Answer: B

Explanation:

The key difference between a peer review of code and static analysis of code using a tool lies in their approaches and scope. A peer review is a manual inspection of the code by peers or colleagues, focusing not only on the technical aspects of the code but also on other elements such as design, compliance with standards, and maintainability. Peer reviews can identify defects, suggest improvements, and ensure that the code adheres to best practices and team standards.

On the other hand, static analysis is an automated process performed by tools designed to analyze the code without executing it. These tools can detect potential issues such as syntax errors, vulnerabilities, and code smells based on predefined rules and patterns. While static analysis is technically focused, it lacks the broader perspective that human reviewers can provide, such as evaluating the code's maintainability or adherence to project-specific standards. Therefore, static analysis targets the code technically, whereas peer review encompasses a wider range of aspects, making option B the correct answer.

NEW QUESTION # 98

Which one of the following statements relating to the benefits of static testing is NOT correct?

- A. Static testing increases development costs and time.
- B. Static testing identifies defects which are not easily found by dynamic testing.
- C. Static testing reduces testing costs and time.
- D. Static testing enables early detection of defects before dynamic testing is performed.

Answer: A

Explanation:

The statement that "static testing increases development costs and time" is NOT correct. Static testing actually helps to reduce development costs and time by identifying defects early in the development process before dynamic testing is performed. Early detection of defects reduces the cost and effort required to fix them and prevents the propagation of defects to later stages, thus reducing overall testing and development costs.

NEW QUESTION # 99

Which ONE of the following options BEST describes the purpose of confirmation testing versus regression testing?

- A. The purpose of confirmation testing is to confirm that the defect giving rise to a failure has been successfully fixed. The regression test aims to ensure that no defects have been introduced or discovered in unmodified areas of the software as a result of the changes made.
- B. Regression testing and confirmation testing are interchangeable and serve the same purpose.
- C. Confirmation testing verifies all system requirements, while regression testing ensures that no additional test cases are needed.
- D. Confirmation testing ensures the entire system functions as expected, whereas regression testing focuses only on modified components.

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Confirmation testing is performed after a defect is fixed to confirm it no longer exists (A). Regression testing ensures new defects have not been introduced in unchanged parts of the system. Regression testing is broader than confirmation testing and covers unmodified areas affected by the changes. Options B, C, and D misrepresent the relationship and scope of these tests.
