Experts at Lead2PassExam have also prepared Splunk SPLK-4001 practice exam software for your self-assessment. This is especially handy for preparation and revision. You will be provided with an examination environment and you will be presented with actual SPLK-4001 Exam Questions. This sort of preparation method enhances your knowledge which is crucial to excelling in the actual Splunk SPLK-4001 certification exam.

Splunk SPLK-4001 certification exam is designed to test an individual's knowledge and skills in using Splunk to monitor and analyze metrics in cloud environments. Splunk O11y Cloud Certified Metrics User certification is aimed at professionals who are responsible for monitoring and analyzing the performance and health of cloud-based applications and infrastructure. It is also suitable for individuals who are interested in learning how to use Splunk to gain insights into the metrics of cloud-based systems.

One of the key benefits of earning the Splunk SPLK-4001 Certification is that it can help you stand out in a competitive job market. Employers are always looking for skilled IT professionals who can help them manage and monitor their cloud-based environments effectively. By earning this certification, you will demonstrate to potential employers that you have the skills and knowledge necessary to excel in this role. Additionally, this certification can help you advance your career by opening up new opportunities for promotion and professional development.

Quiz 2026 Splunk Reliable Exam SPLK-4001 Materials

No doubt the Splunk O11y Cloud Certified Metrics User (SPLK-4001) certification is one of the most challenging certification exams in the market. This Splunk SPLK-4001 certification exam gives always a tough time to Splunk O11y Cloud Certified Metrics User (SPLK-4001) exam candidates. The Lead2PassExam understands this hurdle and offers recommended and real Splunk SPLK-4001 exam practice questions in three different formats.

The Splunk SPLK-4001 exam consists of 60 multiple-choice questions, which must be completed within 90 minutes. The questions are designed to test the candidate's knowledge of Splunk Cloud metrics, including how to create and modify metrics data, how to configure alerts, and how to use dashboards to visualize metrics data. SPLK-4001 Exam also tests the candidate's ability to troubleshoot issues related to metrics data in Splunk Cloud.

Splunk O11y Cloud Certified Metrics User Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which of the following is optional, but highly recommended to include in a datapoint?

- A. Timestamp
- B. Metric name
- C. Value
- D. Metric type

Answer: D

Explanation:

Explanation

The correct answer is D. Metric type.

A metric type is an optional, but highly recommended field that specifies the kind of measurement that a datapoint represents. For example, a metric type can be gauge, counter, cumulative counter, or histogram. A metric type helps Splunk Observability Cloud to interpret and display the data correctly¹ To learn more about how to send metrics to Splunk Observability Cloud, you can refer to this documentation².

<https://docs.splunk.com/Observability/gdi/metrics/metrics.html>

NEW QUESTION # 32

The built-in Kubernetes Navigator includes which of the following?

- A. Map, Nodes, Workloads, Node Detail, Workload Detail, Group Detail, Container Detail
- B. Map, Nodes, Workloads, Node Detail, Workload Detail, Pod Detail, Container Detail
- C. Map, Clusters, Workloads, Node Detail, Workload Detail, Pod Detail, Container Detail
- D. Map, Nodes, Processors, Node Detail, Workload Detail, Pod Detail, Container Detail

Answer: B

Explanation:

Explanation

The correct answer is D. Map, Nodes, Workloads, Node Detail, Workload Detail, Pod Detail, Container Detail.

The built-in Kubernetes Navigator is a feature of Splunk Observability Cloud that provides a comprehensive and intuitive way to monitor the performance and health of Kubernetes environments. It includes the following views:

Map: A graphical representation of the Kubernetes cluster topology, showing the relationships and dependencies among nodes, pods, containers, and services. You can use the map to quickly identify and troubleshoot issues in your cluster¹ **Nodes:** A tabular view of all the nodes in your cluster, showing key metrics such as CPU utilization, memory usage, disk usage, and network traffic.

You can use the nodes view to compare and analyze the performance of different nodes¹ **Workloads:** A tabular view of all the workloads in your cluster, showing key metrics such as CPU utilization, memory usage, network traffic, and error rate. You can use the workloads view to compare and analyze the performance of different workloads, such as deployments, stateful sets, daemon sets, or jobs¹ **Node Detail:** A detailed view of a specific node in your cluster, showing key metrics and charts for CPU utilization, memory usage, disk usage, network traffic, and pod count. You can also see the list of pods running on the node and their status.

You can use the node detail view to drill down into the performance of a single node² Workload Detail: A detailed view of a specific workload in your cluster, showing key metrics and charts for CPU utilization, memory usage, network traffic, error rate, and pod count. You can also see the list of pods belonging to the workload and their status. You can use the workload detail view to drill down into the performance of a single workload² Pod Detail: A detailed view of a specific pod in your cluster, showing key metrics and charts for CPU utilization, memory usage, network traffic, error rate, and container count. You can also see the list of containers within the pod and their status. You can use the pod detail view to drill down into the performance of a single pod² Container Detail: A detailed view of a specific container in your cluster, showing key metrics and charts for CPU utilization, memory usage, network traffic, error rate, and log events. You can use the container detail view to drill down into the performance of a single container² To learn more about how to use Kubernetes Navigator in Splunk Observability Cloud, you can refer to this documentation³.

NEW QUESTION # 33

To refine a search for a metric a customer types host: test-*. What does this filter return?

- A. Only metrics with a dimension of host and a value beginning with test-.
- B. Every metric except those with a dimension of host and a value equal to test.
- C. Only metrics with a value of test- beginning with host.
- D. Error

Answer: A

Explanation:

Explanation

The correct answer is A. Only metrics with a dimension of host and a value beginning with test-.

This filter returns the metrics that have a host dimension that matches the pattern test-. For example, test-01, test-abc, test-xyz, etc.

The asterisk (*) is a wildcard character that can match any string of characters¹ To learn more about how to filter metrics in Splunk Observability Cloud, you can refer to this documentation².

1: <https://docs.splunk.com/Observability/gdi/metrics/search.html#Filter-metrics> 2:

<https://docs.splunk.com/Observability/gdi/metrics/search.html>

NEW QUESTION # 34

What is one reason a user of Splunk Observability Cloud would want to subscribe to an alert?

- A. To determine the root cause of the Issue triggering the detector.
- B. To be able to modify the alert parameters.
- C. To receive an email notification when a detector is triggered.
- D. To perform transformations on the data used by the detector.

Answer: C

Explanation:

One reason a user of Splunk Observability Cloud would want to subscribe to an alert is C. To receive an email notification when a detector is triggered.

A detector is a component of Splunk Observability Cloud that monitors metrics or events and triggers alerts when certain conditions are met. A user can create and configure detectors to suit their monitoring needs and goals¹ A subscription is a way for a user to receive notifications when a detector triggers an alert. A user can subscribe to a detector by entering their email address in the Subscription tab of the detector page. A user can also unsubscribe from a detector at any time² When a user subscribes to an alert, they will receive an email notification that contains information about the alert, such as the detector name, the alert status, the alert severity, the alert time, and the alert message. The email notification also includes links to view the detector, acknowledge the alert, or unsubscribe from the detector² To learn more about how to use detectors and subscriptions in Splunk Observability Cloud, you can refer to these documentations^{1,2}.

1: <https://docs.splunk.com/Observability/alerts-detectors-notifications/detectors.html> 2: <https://docs.splunk.com/Observability/alerts-detectors-notifications/subscribe-to-detectors.html>

NEW QUESTION # 35

What happens when the limit of allowed dimensions is exceeded for an MTS?

- A. The datapoint is averaged.
- B. The datapoint is updated.
- C. The datapoint is dropped.
- **D. The additional dimensions are dropped.**

Answer: D

Explanation:

Explanation

According to the web search results, dimensions are metadata in the form of key-value pairs that monitoring software sends in along with the metrics. The set of metric time series (MTS) dimensions sent during ingest is used, along with the metric name, to uniquely identify an MTS1. Splunk Observability Cloud has a limit of 36 unique dimensions per MTS2. If the limit of allowed dimensions is exceeded for an MTS, the additional dimensions are dropped and not stored or indexed by Observability Cloud2. This means that the data point is still ingested, but without the extra dimensions. Therefore, option A is correct.
