## Valid SPLK-1004 Test Vce, SPLK-1004 Reliable Test Topics

When you're in pain, it is best to learn things. Learning will make you invincible. PassLeaderVCE Splunk SPLK-1004 Exam Training materials can also help you to be invincible. With this training materials, you will receive the Splunk SPLK-1004 certification which recognized and accepted internationally. Then all of your life, including money and position, will improve a lot. Until then, will you still feel painful? No, you will be very happy. You should thanks PassLeaderVCE which provide you with a good training materials. It can help you when you lost, and let you not only improve your own quality, but also demonstratethe value of your perfect life.

## Splunk Core Certified Advanced Power User Sample Questions (Q28-Q33):

### NEW QUESTION # 28

What capability does a power user need to create a Log Event alert action?

- A. edit\_search\_server
- B. edit\_udp
- C. edit\_tcp
- D. edit\_alerts

Answer: D

Explanation:

To create a Log Event alert action in Splunk, a power user needs the edit\_alerts capability (Option D). This capability allows the user to configure and manage alert actions, including setting up alerts to log specific events based on predefined conditions within Splunk's alerting framework.

### NEW QUESTION # 29

What is the default time limit for a subsearch to complete?

- A. 120 seconds
- **B. 60 seconds**
- C. 5 minutes
- D. 10 minutes

**Answer: B**

Explanation:

The default time limit for a subsearch to complete in Splunk is 60 seconds. If the subsearch exceeds this time limit, it will terminate, and the outer search may fail or produce incomplete results.

Here's why this works:

\* Subsearch Timeout: Subsearches are designed to execute quickly and provide results to the outer search. To prevent performance issues, Splunk imposes a default timeout of 60 seconds.

\* Configuration: The timeout can be adjusted using the subsearch\_maxout and subsearch\_timeout settings in limits.conf, but the default remains 60 seconds.

Other options explained:

\* Option A: Incorrect because 10 minutes (600 seconds) is far longer than the default timeout.

\* Option B: Incorrect because 120 seconds is double the default timeout.

\* Option C: Incorrect because 5 minutes (300 seconds) is also longer than the default timeout.

Example: If a subsearch takes longer than 60 seconds to complete, you might see an error like:

Error in 'search': Subsearch exceeded configured timeout.

References:

\* Splunk Documentation on Subsearches: <https://docs.splunk.com/Documentation/Splunk/latest/Search/Aboutsubsearches>

\* Splunk Documentation on limits.conf: <https://docs.splunk.com/Documentation/Splunk/latest/Admin/Limitsconf>

### NEW QUESTION # 30

What are the results from the transaction command when keep\_evicted=true?

- **A. The search results include data from failed transactions**
- B. Only failed transactions are kept in the data
- C. All closed transaction values are set to 0
- D. All closed values are set to 1

**Answer: A**

Explanation:

The keep\_evicted parameter in the transaction command controls whether evicted transactions are included in the search results.

Evicted transactions are those that were not completed within specified constraints like maxspan, maxpause, or maxevents.

According to Splunk Documentation:

"keep\_evicted: Whether to output evicted transactions. Evicted transactions can be distinguished from non-evicted transactions by checking the value of the 'closed\_txn' field."

"The 'closed\_txn' field is set to '0' for evicted transactions and '1' for closed transactions." By setting keep\_evicted=true, you ensure that these incomplete or failed transactions are included in your search results, allowing for comprehensive analysis.

Reference: transaction - Splunk Documentation

### NEW QUESTION # 31

Which of the following are predefined tokens?

- A. \$earliest\_tok\$and\$now\$
- B. ?click.name?and?click.value?
- C. ?click.field?and?click.value?
- D. ?earliest\_tok\$and?latest\_tok?

**Answer: A**

Explanation:

Comprehensive and Detailed Step by Step Explanation: The predefined tokens in Splunk include \$earliest\_tok\$and\$now\$. These tokens are automatically available for use in searches, dashboards, and alerts.

Here's why this works:

\* Predefined Tokens:

\* \$earliest\_tok\$: Represents the earliest time in a search's time range.

\* \$now\$: Represents the current time when the search is executed. These tokens are commonly used to dynamically reference time ranges or timestamps in Splunk queries.

\* Dynamic Behavior: Predefined tokens like \$earliest\_tok\$and\$now\$ are automatically populated by Splunk based on the context of the search or dashboard.

Other options explained:

\* Option B: Incorrect because ?click.field?and?click.value? are not predefined tokens; they are contextual drilldown tokens that depend on user interaction.

\* Option C: Incorrect because ?earliest\_tok\$and?latest\_tok?mix invalid syntax (?and\$) and are not predefined tokens.

\* Option D: Incorrect because ?click.name?and?click.value? are contextual drilldown tokens, not predefined tokens.

References:

\* Splunk Documentation on Tokens: <https://docs.splunk.com/Documentation/Splunk/latest/Viz/UseTokenstoBuildDynamicInputs>

\* Splunk Documentation on Time Tokens: <https://docs.splunk.com/Documentation/Splunk/latest/Search/Specifytimemodifiersinyoursearch>

### NEW QUESTION # 32

Which of the following will best optimize dashboard performance?

- A. Use accelerated data models.
- B. Use base searches.
- C. Use inline searches.
- D. Use scheduled reports.

**Answer: A**

Explanation:

Accelerated data models in Splunk create summaries of data that can be queried more efficiently, significantly improving dashboard performance. By precomputing and storing results, dashboards can retrieve data faster, reducing load times and resource consumption.

According to Splunk Documentation:

"Data model acceleration speeds up reporting for the entire set of fields that you define in a data model and which you and your Pivot users want to report on." Reference: Accelerate Data Models - Splunk Documentation

### NEW QUESTION # 33

.....

Buying any product should choose a trustworthy company. Our PassLeaderVCE can give you the promise of the highest pass rate of SPLK-1004 exam; we can give you a promise to try our SPLK-1004 software for free, and the promise of free updates within a year after purchase. To resolve your doubts, we assure you that if you regrettably fail the SPLK-1004 Exam, we will full refund all the cost you buy our study materials. PassLeaderVCE is your best partners in your preparation for SPLK-1004 exam.
