## Arch-303 Exam Testking, Best Arch-303 Study Material

Our company in the field of the Arch-303 exam bootcamp for years, we also enjoy high reputation in the business. You choose us, we will give you the best we have, and your right choice will also bring the benefits to you. With the high reputation in the field, we can guarantee the quality of the Arch-303 Exam Dumps. It also contains the free update for one year for you. It can save your money for updating, and the update version will send to your mailbox automatically.

## Salesforce Certified B2C Commerce Architect Sample Questions (Q41-Q46):

### NEW QUESTION # 41

The Client plans to deploy a new payment provider and Order Management System on its existing B2C Commerce website. They have asked an Architect to advise which environment it should use to conduct load testing of its new integrations. Which environment should be used as the ideal environment for this kind of load test?

- A. The Development Instance of a rental Realm.
- B. The Production Instance of a rental Realm.
- **C. The Development Instance of the existing Realm.**
- D. The Production instance of the existing Realm.

**Answer: C**

Explanation:

For conducting load testing of new integrations with a payment provider and Order Management System, it is recommended to use the Development Instance of the existing Realm (Option B). This approach ensures that any issues found during testing do not affect the live production environment, while still allowing tests to be conducted in an environment that mirrors the production setup as closely as possible. This minimizes the risk of disruptive downtime or customer-facing errors when the integration goes live.

### NEW QUESTION # 42

A company manages its regional operations as separate businesses. The regional sites (Site A and Site B) operate with:

- \* Separate realms
- \* Different code bases
- \* Different category navigation menus
- \* Frequent updates on category structure

The requirement from the business is to provide hreflang link tags on category pages pointing to the same category on the other regional site. Example HTML for one of these links as displayed on Site A is:

```
<link rel="alternate" href="https://www.siteb.com/en_US/womens-new-arrivals" hreflang="en_US" />
```

Which solution should the Architect choose while keeping performance in mind?

- A. Create a new custom attribute on the Category. Populate the attribute with the other entire site URLs corresponding to

locales In JSON Format. Use the attribute to display the hreflang link tag.

- B. Create a new custom object type Populate the hreflang mapping for each category and locale in this custom object. Use the custom object to display the hreflang link tag.
- C. Create additional locales in all realms create a new custom attribute on the category that is localized. Populate the attribute with the other site URLs and use it to display the hreflang tag.
- D. Create a custom Business Manager module. Ask the business to maintain the hreflang link tags for each regional site in this Business Manager module.

**Answer: B**

Explanation:

For a multi-regional setup with different realms and frequent updates, using a custom object to manage hreflang mappings offers flexibility and scalability. Custom objects can efficiently store URL mappings for each category across different locales, making it easier to manage and update as category structures change.

This method allows for centralized control over hreflang mappings and simplifies maintenance compared to other options which might involve more complex integrations or manual updates.

### NEW QUESTION # 43

An integration cartridge implements communication between the B2C Commerce Storefront and a third-party service provider. The cartridge contains the localServiceRegistry code:

```
var LocalServiceRegistry = require('dw/svc/LocalServiceRegistry');
module.exports = LocalServiceRegistry.createService('serviceprovider.rest.auth',
{
    createRequest: function(svc) {
        var svcCredential = svc.getConfiguration().credential;
        if (empty(svcCredential.user) || empty(svcCredential.password)) {
            throw new Error('Basic Auth requires valid client ID (user) and secret (password)');
        }
        var requestBody = {
            clientId: svcCredential.user,
            clientSecret: svcCredential.password
        };
        svc.setAuthentication('NONE');
        svc.addHeader('Accept', 'application/json');
        svc.post('url', requestBody);
    },
    parseResponse: function(svc, httpClient) {
        return httpClient.text;
    }
});
```

How does this code sample accomplish authentication to the service provider?

- A. By Issuing a Basic Auth request to the service provider.
- B. By performing a signed SOAP Auth request using a certificate.
- C. By wrapping the authentication service call with Basic Auth.
- D. By disabling Basic Auth and executing the service authentication call.

**Answer: D**

Explanation:

The code sample shows the creation of a service request to a third-party service provider, where the authentication method is explicitly set to 'NONE' using the line `svc.setAuthentication("NONE");`. This configuration implies that the request does not use Basic Authentication or any embedded credentials like client ID and secret in the HTTP headers for authentication purposes. Instead, it builds the authentication details into the request body, which suggests that the service expects credentials as part of the payload rather than as part of the standard authentication headers, thus effectively disabling Basic Auth for this transaction.

### NEW QUESTION # 44

A developer is validating the pipeline cache and noticed that the PDP page is very low cached. The one parameter is showing the position on the product listing page upon checking the site and code.

What should the developer adjust in order to improve the page cache hit ratio, keeping in mind that the client is insisting on the parameter for their analytics?

- A. Rework the Implementation so the parameter is not passed in the URL and is read from the URL hash.
- B. Rework the Implementation so it doesn't depend on that parameter.
- C. Rework the implementation so it reads the parameter on client-side, passes it to the analytics and exclude it from cache parameters.
- D. Add the key to the cache exclude parameters.

**Answer: D**

#### NEW QUESTION # 45

A B2C Commerce developer has implemented a job that connects to an SFTP, loops through a specific number of .csv files, and generates a generic mapping for every file. In order to keep track of the mappings imported, if a generic mapping is created successfully, a custom object instance is created with the .

csv file name. After running the job in the Development instance, the developer checks the Custom Objects in Business Manager and notices there isn't a Custom Object for each csv file that was on SFTP.

What are two possible reasons that some generic mappings were not created? Choose 2 answers

- A. Invalid format in one or more of the .csv files.
- B. The job needs to run on Staging and then replicate the generic mappings and custom objects on Development
- C. The generic mappings definition needs to be replicated from Staging before running the job.
- D. The maximum number of generic mappings was reached.

**Answer: A,D**

Explanation:

Two plausible reasons for some generic mappings not being created despite the SFTP job running are: A) the system reached its limit for the maximum number of generic mappings allowed, and C) there was an invalid format in one or more of the .csv files processed. When the maximum threshold for mappings is reached, the system cannot create additional mappings, thus stopping any further imports from being registered as custom objects. Additionally, if .csv files are incorrectly formatted, the job would fail to create mappings for those files, leading to the absence of corresponding custom objects in Business Manager. It's crucial to ensure that file formats adhere to expected specifications and that system limits are adequately managed to avoid such issues.

#### NEW QUESTION # 46

.....

When you purchase our Arch-303 exam materials, we have installed the most advanced operation machines in our website. If you buy the Arch-303 practice test on our web, and after purchasing, it only takes 5 to 10 minutes before our operation system sends our Arch-303 Study Materials to your email address, that is to say, with our advanced operation system of our Arch-303 study guide, there is nothing that you need to worry about, we can ensure you the fastest delivery on the Arch-303 training guide.
