Salesforce Plat-Arch-201 Reliable Exam Vce & Plat-Arch-201 Free Practice Exams

The Prep4sureExam offers three formats of study materials for the Salesforce Certified Platform Data Architect (Plat-Arch-201) certification exam preparation. Our product is designed by experts in their respective fields, ensuring that our customers receive the most up-to-date and accurate Salesforce Plat-Arch-201 Exam Questions.

Salesforce Certified Platform Data Architect Sample Questions (Q117-Q122):

NEW QUESTION # 117

Universal Containers (UC) is planning to move away from legacy CRM to Salesforce. As part of one-time data migration, UC will need to keep the original date when a contact was created in the legacy system. How should an Architect design the data migration solution to meet this requirement?

- A. Enable "Set Audit Fields" and assign the permission to the user loading the data for the duration of the migration.
- B. Write an Apex trigger on the Contact object, before insert event to set the original value in a standard Created Date field.
- C. After the data is migrated, perform an update on all records to set the original date in a standard Created Date field.
- D. Create a new field on the Contact object to capture the Created Date. Hide the standard Created Date field using Field -

Level Security.

Answer: A

Explanation:

Enabling "Set Audit Fields" allows the user loading the data to set the value of the standard CreatedDate field to match the original date from the legacy system. This is a one-time permission that can be revoked after the migration is completed. The other options would either not work or require additional customization

NEW QUESTION # 118

UC has a roll-up summary field on Account to calculate the count of contacts associated with an account. During the account load, SF is throwing an "Unable to lock a row" error. Which solution should a data architect recommend, to resolve the error?

- A. Perform Batch job in parallel mode and reduce Batch size
- **B. Perform Batch job in serial mode and reduce batch size**
- C. Defer roll-up summary fields calculation during data migration.
- D. Leverage data loader platform API to load data.

Answer: B

Explanation:

The best solution to resolve the error of "Unable to lock a row" during the account load is to perform batch job in serial mode and reduce batch size. This is because roll-up summary fields are calculated synchronously when the parent record is updated, and asynchronously when the child record is updated. Therefore, updating many child records at once can cause locking issues on the parent record. To avoid this, it is recommended to use serial mode and smaller batch sizes when loading data using tools like Data Loader or Bulk API. Leverage data loader platform API to load data is not a good option because it does not specify the mode or batch size. Perform batch job in parallel mode and reduce batch size is not a good option because parallel mode can still cause locking issues even with smaller batches. Defer roll-up summary fields calculation during data migration is not a good option because it is not possible to defer or disable roll-up summary fields calculation

NEW QUESTION # 119

DreamHouse Realty has a data model as shown in the image. The Project object has a private sharing model, and it has Roll-Up summary fields to calculate the number of resources assigned to the project, total hours for the project, and the number of work items associated to the project.

There will be a large amount of time entry records to be loaded regularly from an external system into Salesforce.

What should the Architect consider in this situation?

- A. Calculate summary values instead of Roll-Up by using workflow.
- B. Calculate summary values instead of Roll-Up by using triggers.
- **C. Load all data after deferring sharing calculations.**
- D. Load all data using external IDs to link to parent records.

Answer: C

Explanation:

According to the exam guide, one of the objectives is to "describe the use cases and considerations for deferring sharing calculations". This implies that option A is the correct way to load large amounts of data into Salesforce without affecting performance and data integrity.

Deferring sharing calculations allows the data to be loaded first and then the sharing rules to be applied later.

NEW QUESTION # 120

Universal Containers wants to automatically archive all inactive Account data that is older than 3 years. The information does not need to remain accessible within the application. Which two methods should be recommended to meet this requirement? Choose 2 answer

- A. Schedule a weekly export file from the Salesforce UI.
- B. Use the Force.com Workbench to export the data.
- **C. Schedule jobs to export and delete using an ETL tool.**

- **D. Schedule jobs to export and delete using the Data Loader.**

Answer: C,D

Explanation:

Both C and D are valid methods to automatically archive and delete inactive Account data that is older than 3 years. You can use an ETL tool or the Data Loader to schedule jobs to export and delete data based on certain criteria.

NEW QUESTION # 121

Northern Trail Outfitters (NTO) has a variety of customers that include householder, businesses, and individuals.

The following conditions exist within its system:

- NTO has a total of five million customers.
- Duplicate records exist, which is replicated across many systems, including Salesforce.
- Given these conditions, there is a lack of consistent presentation and clear identification of a customer record.

Which three options should a data architect perform to resolve the issues with the customer data?

- A. Duplicate customer records across the system and provide a two-way sync of data between the systems.
- **B. Create a unique global customer ID for each customer and store that in all systems for referential identity.**
- **C. Create a customer master database external to Salesforce as a system of truth and sync the customer data with all systems.**
- D. Use Salesforce CDC to sync customer data across all systems to keep customer record in sync.
- **E. Invest in a data duplicate tool to de-dupe and merge duplicate records across all systems.**

Answer: B,C,E

Explanation:

Creating a unique global customer ID for each customer and storing that in all systems for referential identity (option B), investing in a data duplicate tool to de-dupe and merge duplicate records across all systems (option C), and creating a customer master database external to Salesforce as a system of truth and syncing the customer data with all systems (option E) are the three options that a data architect should perform to resolve the issues with the customer data.

Option B ensures that each customer can be uniquely identified across different systems, option C eliminates duplicate records and improves data quality, and option E provides a consistent and reliable source of customer data for all systems.

NEW QUESTION # 122

.....

The accuracy rate of Prep4sureExam Plat-Arch-201 exam certification training materials is high with wide coverage. It not only can improve your cultural knowledge, but also improve your operation level. It not only makes you become IT elite, but also make you have a well-paid job that others admire. Before buying our Plat-Arch-201 Certification Training materials, you can download Plat-Arch-201 free demo and answers on probation on Prep4sureExam website.
