질문 # 338

You have a plug-in that performs business logic on contact records. The plug-in is registered in the post-operation stage and is executed when a field named custom_field3 is updated.

The plug-in contains the following code:

```
var cols = new ColumnSet(true, "custom_field1");
var contact = service.Retrieve("contact", ctx.PrimaryEntityId, cols);
var updatedValue = contact.GetAttributeValue<string>("lastname");
updatedValue += contact.GetAttributeValue<string>("custom_field1");
contact["custom_field2"] = updatedValue;
service.Update(contact);
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
You can improve code performance by using the following code instead of retrieving individual fields: <code>new ColumnSet(true)</code>	<input type="radio"/>	<input type="radio"/>
You can avoid retrieving the changed entity by using plug-in images.	<input type="radio"/>	<input type="radio"/>
You can avoid updating the changed entity by registering the plug-in in the pre-operation stage.	<input type="radio"/>	<input type="radio"/>

	You can avoid updating the changed entity by registering the plug-in in the pre-operation stage.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation

Answer Area**Statements****Yes****No**

You can improve code performance by using the following code instead of retrieving individual fields: `new ColumnSet(true)`

You can avoid retrieving the changed entity by using plug-in images.

You can avoid updating the changed entity by registering the plug-in in the pre-operation stage.

**질문 # 339**

An organization has a Dynamics 365 Sales environment. In the development environment, you create a business rule named BusinessRule1 on the Account entity. You deploy BusinessRule1 to production as part of a managed solution. You need to remove BusinessRule1 from the production environment.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions**Answer Area**

In the development environment, navigate to Solutions.

Create a new managed solution in the production environment.

Export the solution as managed and import it in the production environment.

In the production environment, add a new business rule.

Select the solution that has BusinessRule1 and deactivate the rule.

Select the solution that has BusinessRule1, navigate to the appropriate entity, and delete the rule.

**정답:****설명:****ACTIONS**

In the development environment, navigate to Solutions.

Create a new managed solution in the production environment.

Export the solution as managed and import it in the production environment.

In the production environment, add a new business rule.

Select the solution that has BusinessRule1 and deactivate the rule.

Select the solution that has BusinessRule1, navigate to the appropriate entity, and delete the rule.

Explanation:**Answer Area**

In the development environment, navigate to Solutions.

Export the solution as managed and import it in the production environment.

Select the solution that has BusinessRule1, navigate to the appropriate entity, and delete the rule.

In the development environment, navigate to Solutions.

Export the solution as managed and import it in the production environment.

Select the solution that has BusinessRule1, navigate to the appropriate entity, and delete the rule.

Step 1: In the development environment, navigate to Solutions.

The only supported way of transferring customizations from one CRM organization to another has been through Solutions.

With Solution Management came the concept of Managed and Unmanaged Solutions.

Step 2: Export the solution as managed and import it in the production environment.

Managed is a way to protect your IP (Intellectual Property) with an easy concept of install and uninstall.

Step 3: Select the solution that has BusinessRule1, navigate to the appropriate entity, and delete the rule.

질문 # 340

You are creating a plug-in for a Power Apps app for the human resources department at the company. The app will be used to process new employees and help employees apply for an identification card.

You have the following requirements:

- * Applications must not be marked as complete if the employee has not completed mandatory drug screening.
- * Add logic that stores the name of the human resources team member that approves an application. This step must be completed before an ID card is created for the applicant.
- * Successful validation and ID card printing.

You need to configure the event pipeline. In which stage should you register each step?

To answer, drag the appropriate stages to the correct steps. Each stage may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

질문 # 341

A multinational company requires that all phone numbers be standardized as country code + area code + phone number.

The application design team decides that a custom PowerApps component framework (PCF) control should be used to prompt users for an area code and correctly format the phone number.

You need to get the list of valid area codes when a contact record is opened and before the user enters a new phone number.

In which function should you call webAPI.retrieveMultipleRecords?

- A. init
- B. notifyOutputChanged
- C. getOutputs
- D. **updateView**

정답: D

설명:

Explanation

The updateView method will be called when any value in the property bag has changed. This includes field values, data-sets, global values such as container height and width, offline status, component metadata values such as label, visible, etc.

Set the value of the field component to the raw value from the configured field.

Note: webAPI.retrieveMultipleRecords retrieves a collection of entity records.

질문 # 342

A delivery service uses a canvas app to track and deliver packages. The app uses SQL Server as a data store. The database includes the following tables:

Table	Comments
Receivers	Stores information about customers who receive delivered goods. The table uses an identity column named SBsqlid to uniquely identify each record.
Packages	Stores information about package details. Employees update package details during delivery to reference the person who received the package.

The app includes the following code to save all required information. (Line numbers are included for reference only.)

```
ClearCollect(  
    Result,  
    Patch(  
        Receivers,  
        Defaults(Receivers),  
        {  
            SignedByFN: txtInFirstName.Text,  
            SignedByID: txtInID.Text  
        }  
    )  
);  
Patch(  
    Packages,  
    Defaults(Packages),  
    {  
        SBsqlid: First(Result).SBsqlid,  
        TrackingNo: lblPackage.Text  
    }  
);
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

 Microsoft	<input type="radio"/> Yes	<input type="radio"/> No
The Patch statement populates the identity column when a record is created.	<input type="radio"/> Yes	<input type="radio"/> No
The Patch statement at line 03 creates a reference to the customer who received a specific package.	<input type="radio"/> Yes	<input type="radio"/> No
You must add a lookup function to ensure that the code correctly creates a reference to the customer who receives a package.	<input type="radio"/> Yes	<input type="radio"/> No
The Patch statement at line 12 merges records.	<input type="radio"/> Yes	<input type="radio"/> No

정답:

설명:
