NCLEX-RN (National Council Licensure Examination for Registered Nurses) is a standardized exam that all nursing graduates must pass in order to obtain a license to practice nursing in the United States. NCLEX-RN exam is developed and administered by the National Council of State Boards of Nursing (NCSBN). The NCLEX-RN exam measures the knowledge, skills, and abilities essential for safe and effective nursing practice.

NCLEX-RN exam is conducted by the National Council of State Boards of Nursing (NCSBN). It is a computer-adaptive test, which means the questions' level of difficulty adapts to the individual's ability to answer them. NCLEX-RN Exam is designed to test the individual's level of competence, from simple to complex nursing tasks. The test is carried out at various testing centers across the country, and individuals must register for the exam and submit their credentials to the NCSBN.

## NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q353-Q358):

### NEW QUESTION # 353

A client has been instructed in how to take her nitroglycerin tablets. The nurse giving her instructions knows the client understands the information when she tells her:

- A. "I should call the doctor if three doses of the medicine do not relieve my pain."
- B. "I should take these with water but not with milk."
- C. "I should contact my physician if I have headaches after I take this medicine."
- D. "I should keep the tablets in the refrigerator."

**Answer: A**

Explanation:

Explanation

(A) Headaches may occur after taking nitroglycerin because of vasodilation. (B) The tablets do not need to be refrigerated. The client should carry them with her. (C) The client should contact the physician if repeated doses of nitroglycerin do not relieve the discomfort. (D) Nitroglycerin tablets should be dissolved under the tongue, not swallowed.

### NEW QUESTION # 354

The nurse is teaching a client how to perform monthly testicular self-examination (TSE) and states that it is best to perform the procedure right after showering. This statement is made by the nurse based on the knowledge that:

- A. The client is more likely to remember to perform the TSE when in the nude
- B. When the scrotum is exposed to cool temperatures, the testicles become large and bulky
- C. The scrotum will be softer and more relaxed after a warm shower, making the testicles easier to palpate
- D. The examination will be less painful at this time

**Answer: C**

Explanation:

(A) Nudity is not a trigger for reminding males to perform TSE. (B) Testicles become more firm when exposed to cool temperatures, but not large and bulky. (C) The testicles will be lower and more easily palpated with warmer temperatures. A protective mechanism of the body to protect sperm production is for the scrotum to pull closer to the body when exposed to cooler temperatures. (D) The examination should not be painful.

### NEW QUESTION # 355

A 55-year-old client is unconscious, and his physician has decided to begin tube feeding him using a smallbore silicone feeding tube (Keofeed, Duo-Tube). After the tube is inserted, the nurse identifies the most reliable way to confirm appropriate placement is to:

- A. Obtain a chest x-ray
- B. Place the tip of the tube under water and observe for air bubbles
- C. Auscultate air insufflated through the tube
- D. Aspirate gastric contents

**Answer: A**

Explanation:

Explanation

(A) Aspiration of gastric contents is usually a reliable way to verify tube placement. However, if the client has dark respiratory secretions from bleeding, tube feedings could be mistaken for respiratory secretions; in other words, aspirating an empty stomach is less reliable in this instance. In addition, it is common for small-bore feeding tubes to collapse when suction pressure is applied. (B) Insufflation of air into large-bore nasogastric tubes can usually be clearly heard. In small-bore tubes, it is more difficult to hear air, and it is difficult to distinguish between air in the stomach and air in the esophagus. (C) A chest x-ray is the most reliable means to

determine placement of small-bore nasogastric tubes. (D) Observing for air bubbles when the tip is held under water is an unreliable means to determine correct tube placement for all types of nasogastric tubes. Air may come from both the respiratory tract and the stomach, and the client who is breathing shallowly may not force air out of the tube into the water.

#### NEW QUESTION # 356

To appropriately monitor therapy and client progress, the nurse should be aware that increased myocardial work and O2 demand will occur with which of the following?

- A. Increase in balance of myocardial O2 supply and demand
- **B. Positive inotropic therapy**
- C. Negative chronotropic therapy
- D. Afterload reduction therapy

**Answer: B**

Explanation:

Explanation

(A) Inotropic therapy will increase contractility, which will increase myocardial O2 demand. (B) Decreased heart rate to the point of bradycardia will increase coronary artery filling time. This should be used cautiously because tachycardia may be a compensatory mechanism to increase cardiac output. (C) The goal in the care of the MI client with angina is to maintain a balance between myocardial O2 supply and demand. (D) Decrease in systemic vascular resistance by drug therapy, such as IV nitroglycerin or nitroprusside, or intra-aortic balloon pump therapy, would decrease myocardial work and O2 demand.

#### NEW QUESTION # 357

The nurse is teaching a client how to perform monthly testicular self-examination (TSE) and states that it is best to perform the procedure right after showering. This statement is made by the nurse based on the knowledge that:

- B. When the scrotum is exposed to cool temperatures, the testicles become large and bulky
- **C. The scrotum will be softer and more relaxed after a warm shower, making the testicles easier to palpate**
- D. The examination will be less painful at this time

**Answer: C**

Explanation:

Explanation/Reference:

Explanation:

(A) Nudity is not a trigger for reminding males to perform TSE. (B) Testicles become more firm when exposed to cool temperatures, but not large and bulky. (C) The testicles will be lower and more easily palpated with warmer temperatures.
