NEW QUESTION # 338

What is the purpose of a Proxy NAS server?

- A. Increase performance for shared network connections that access NAS servers.
- B. Increase security of production NAS servers.
- C. Access snapshot replicas on the destination side of a replicated file resource.
- D. Access snapshots for testing production NAS servers.

Answer: C

Explanation:

The purpose of a Proxy NAS server is to access snapshot replicas on the destination side of a replicated file resource. A Proxy NAS server is a temporary NAS server that is created on the destination system to mount a snapshot replica of a replicated file system. This allows the user to access the data on the snapshot replica for testing, recovery, or other purposes. A Proxy NAS server does not increase performance or security of production NAS servers, nor does it access snapshots for testing production NAS servers.
