## 2026 Fire-Inspector-II: Perfect Latest 67 - Fire Inspector II Exam Exam Discount

Are you aware of the importance of the Fire-Inspector-II certification? If your answer is not, you may place yourself at the risk of being eliminated by the labor market. As we know, the Fire-Inspector-II certification is the main reflection of your ability. If you want to maintain your job or get a better job for making a living for your family, it is urgent for you to try your best to get the Fire-Inspector-II Certification. We are glad to help you get the certification with our best Fire-Inspector-II study materials successfully.

## International Code Council 67 - Fire Inspector II Exam Sample Questions (Q66-Q71):

### NEW QUESTION # 66

What is the occupant load of a 50,000 gross square foot airport terminal concourse?

- A. 0
- B. 1,000
- C. 2,500
- D. 1

**Answer: C**

Explanation:

To determine the occupant load of a 50,000 gross square foot airport terminal concourse, we use the occupant load factor from 2021 IBC Table 1004.5.

Step 1: Identify the Occupant Load Factor for an Airport Concourse

According to IBC Table 1004.5, the occupant load factor for an airport terminal concourse is 20 sq. ft. per person (gross).

Step 2: Calculate the Occupant Load

$50,000 \div 20 = 2,500$  occupants  
Reference to Fire Inspector Documentation:

1. 2021 International Building Code (IBC) - Table 1004.5 (Occupant Load Factor for Airport Concourses)

20 sq. ft. per person is assigned for airport concourses.

2. 2021 International Fire Code (IFC) - Section 1004.1.2 (Occupant Load Determination) Gross area calculations must follow the correct occupant load factor per IBC Table 1004.5.

Detailed Explanation of Answer Choices:

Option A (Incorrect): 200 is too low based on proper calculations.

Option B (Incorrect): 500 is also too low.

Option C (Incorrect): 1,000 is below the required calculation.

Option D (Correct): 2,500 is the correct calculation based on IBC Table 1004.5.

Thus, the correct and verified answer is: D. 2,500.

### NEW QUESTION # 67

The fire code official has the right to enter a building to perform inspections in all of the following situations except:

- A. vacant buildings at any time.
- B. interior space of a warehouse with an administrative warrant.
- C. factory floors with permission to enter.
- D. public spaces of a mall during normal business hours.

**Answer: A**

Explanation:

A fire code official has authority to enter buildings for fire safety inspections, but they must comply with legal entry requirements. The Fourth Amendment of the U.S. Constitution and fire codes restrict entry without permission, an administrative warrant, or legal authority.

Fire code officials do NOT have the right to enter vacant buildings at any time without proper authorization.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 104.3 (Right of Entry)

IFC 104.3 states that a fire code official may only enter a building at reasonable times to conduct inspections, with consent or a legal warrant.

If entry is refused, the fire code official must obtain an administrative warrant before proceeding.

2. Fourth Amendment of the U.S. Constitution

Protects property owners from unlawful searches and seizures without proper legal authority.

Detailed Explanation of Answer Choices:

Option A (Correct): Fire code officials cannot enter vacant buildings at any time without permission or a warrant.

Option B (Incorrect): Fire code officials can enter a factory floor with permission from the owner/occupant.

Option C (Incorrect): Fire code officials can inspect public areas of malls during business hours since these spaces are open to the public.

Option D (Incorrect): Fire code officials can enter a warehouse's interior with an administrative warrant, which is legally authorized for inspections.

Thus, the correct and verified answer is: A. Vacant buildings at any time.

### NEW QUESTION # 68

Quantities of flammable liquid storage in a control area of an S Occupancy may be doubled when:

- A. permission is granted by the chief.
- B. the control area is provided with exhaust ventilation in accordance with fire code requirements.
- C. the control area exceeds 50,000 sq. ft.
- D. the building is protected with automatic sprinklers.

**Answer: D**

Explanation:

The storage of flammable liquids in control areas within an S Occupancy (Storage Occupancy) is governed by the 2021 International Fire Code (IFC), Section 5003 - Hazardous Materials, and Table 5003.1.1(1).

IFC Section 5003.1.1(1) - Maximum Allowable Quantity (MAQ) Adjustments:

The maximum allowable quantity (MAQ) of flammable liquids in a control area may be doubled if an approved automatic sprinkler system is installed throughout the building.

Why Other Options Are Incorrect?

A: Permission is granted by the chief.

Fire officials can enforce code requirements but do not have the authority to override MAQ limits unless explicitly allowed in the code.

B: The control area exceeds 50,000 sq. ft.

The code does not specify an increase based solely on size; the sprinkler system is the determining factor.

D: The control area is provided with exhaust ventilation in accordance with fire code requirements.

While ventilation is important for hazardous material safety, it does not allow for an increase in the maximum storage quantity.

### NEW QUESTION # 69

A building under construction which has two stairways shall have a minimum of how many fire extinguishers per floor?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: C**

Explanation:

Reference to Fire Extinguisher Requirements in Buildings Under Construction:

NFPA 241 (Standard for Safeguarding Construction, Alteration, and Demolition Operations) Section 13.6.1 and IFC 3309.1 require that:

A minimum of one fire extinguisher per floor is required.

Additional extinguishers are required based on stairwells and floor area.

If a building under construction has two stairways, a minimum of two fire extinguishers must be provided per floor to ensure adequate fire protection coverage.

Fire Safety Considerations for Construction Sites:

Construction sites pose a high fire risk due to temporary electrical systems, combustible materials, and lack of finished fire suppression systems.

Fire extinguishers must be readily available and evenly distributed near exit stairways and pathways for rapid access in case of an emergency.

Clarification of Incorrect Answer Choices:

A: 1 # Incorrect

One extinguisher is the minimum required for floors with only one exit/stairway, but a building with two stairways requires at least two extinguishers.

C: 3 # Incorrect

While more extinguishers can be added for larger areas or high-risk work zones, the minimum requirement remains two for two stairwells.

D: 4 # Incorrect

There is no general requirement for four extinguishers per floor unless dictated by floor size and hazard level.

Conclusion:

The correct and verified answer is B (2 fire extinguishers per floor) based on NFPA 241 and IFC 3309.1, ensuring compliance with fire safety standards for buildings under construction.

### NEW QUESTION # 70

The minimum working space width for a 66-in. wide electrical equipment panel shall be in

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: D**

Explanation:

### Minimum Working Space Width for Electrical Equipment Panels

According to National Electrical Code (NEC) 110.26(A)(2) and International Fire Code (IFC) 2021, Section 604.3, the minimum working space width for electrical equipment must be at least the width of the equipment or 30 inches, whichever is greater.

Since the equipment panel in the question is 66 inches wide, the required working space width must be at least 66 inches.

#### 2. Why 66 Inches is the Correct Answer

The minimum clearance width must be equal to the width of the electrical equipment if the panel itself is wider than 30 inches.

This ensures safe maintenance and emergency access to electrical components.

#### 3. Verification of Other Options

Option A (30 inches) - Incorrect, because the equipment is wider than 30 inches, requiring a larger clearance.

Option B (36 inches) - Incorrect, as this is not the requirement for a 66-inch-wide panel.

Option D (78 inches) - Incorrect, as the clearance does not need to exceed the width of the panel.

Reference Sources:

National Electrical Code (NEC) 2023 - Section 110.26(A)(2) (Working Space Width Requirements) International Fire Code (IFC) 2021 - Section 604.3 (Electrical Equipment Clearance Requirements) ICC Fire Inspector II Study Guide (2021)

## NEW QUESTION # 71

.....

There are multiple companies offering Fire-Inspector-II exam material in the market, so we totally understand your inquisitiveness that whom to trust. For your convenience, TrainingQuiz gives you a chance to try a free demo of International Code Council Fire-Inspector-II Exam Questions, which means you can buy the product once you are satisfied with the features and you think it can actually help you to pass your certification exam.
