NEW QUESTION # 76

Which two cloud computing services are vendor-managed in an Infrastructure as a Service (IaaS) delivery model? (Choose two.)

- A. Data
- B. Applications
- C. Networking
- D. Operating System
- E. Storage

Answer: C,E

Explanation:

In the Infrastructure as a Service (IaaS) model, the cloud provider is responsible for managing and maintaining the underlying infrastructure components, including:

Networking: The cloud provider handles all aspects of network configuration, hardware, and virtual networking.

Storage: The cloud provider supplies and manages the physical and virtual storage infrastructure required to support the consumer's data needs.

The customer is responsible for managing:

Operating Systems

Applications

Data

This model offers flexibility while shifting infrastructure maintenance responsibilities to the service provider.

NEW QUESTION # 77

Which command is used to download a copied configuration file from a TFTP server to merge it with the running configuration of a replacement Cisco device?

- A. copy tftp: startup-config
- B. merge tftp: running-config
- C. load tftp: running-config
- D. copy tftp: running-config

Answer: D

Explanation:

The command copy tftp: running-config is used to retrieve a configuration file from a TFTP server and merge it with the current running configuration of a Cisco device. This operation is additive, meaning it integrates the new configuration commands into the existing running configuration without removing any pre-existing commands unless explicitly overridden.

This method is particularly useful when restoring configurations to a replacement device, as it allows for the seamless integration of necessary settings without disrupting the current operational state.

In contrast, using copy tftp: startup-config would overwrite the startup configuration file, which could lead to unintended consequences upon the next device reload. The options load tftp: running-config and merge tftp: running-config are not valid Cisco IOS commands.

NEW QUESTION # 78

Which Cisco UCS management platform is specifically designed for managing standalone Cisco UCS C-Series rack servers and E-Series servers?

- A. Cisco UCS Manager
- B. Cisco UCS Central
- C. Cisco Intersight
- D. Cisco Integrated Management Controller

Answer: D

Explanation:

The Cisco Integrated Management Controller (CIMC) is the embedded management solution designed specifically for standalone Cisco UCS C-Series rack servers and E-Series servers. It allows administrators to perform out-of-band management functions such as BIOS configuration, firmware updates, remote console access, and power control.

Cisco UCS Manager is used for managing UCS blade chassis environments.

Cisco UCS Central is intended for centralized management across multiple UCS domains.

Cisco Intersight is a cloud-based management platform that can extend CIMC functionality but is not the embedded, standalone option.
