**Answer: A**

#### NEW QUESTION # 15

Universal Containers asks a CRM Analytics consultant to review the performance of its local data sync.

After removing unused objects and fields from connected data, what else should the consultant do to improve performance of the data sync?

- **A. Evaluate connection mode for each connected object.**
- B. Contact Salesforce Support to increase sync speed.
- C. Enable fast sync in analytics settings.

**Answer: A**

Explanation:

To improve the performance of local data sync in Universal Containers, evaluating the connection mode for each connected object is a practical approach. Here's the rationale:

Optimization of Resources: Different connection modes (e.g., Full Sync, Incremental Sync) use different amounts of resources.

Choosing the right mode for each object based on how frequently its data changes can optimize the sync process and reduce load times.

Efficient Data Handling: By tailoring the connection mode to the needs of specific data objects, the overall efficiency of the data sync process is improved, leading to faster refresh rates and more timely data availability.

Cost and Performance Balance: Evaluating and selecting the appropriate connection mode can also help balance performance needs with cost constraints, as some modes may consume more compute resources than others.
