HP Aruba Certified Network Security Professional - HPE7-A02 Free Exam Questions

QUESTION NO: 1
A company uses HPE Aruba Networking ClearPass Policy Manager (CPPM) as a TACACS+ server to authenticate managers on its AOS-CX switches. You want to assign managers to groups on the AOS-CX switch by name. How do you configure this setting in a CPPM TACACS+ enforcement profile?

- A. Add the Shell service and set autoconf to the group name.
- B. Add the Shell service and set priv-rl to the group name.
- C. Add the Aruba-Common service and set Aruba-Admin-Role to the group name.
- D. Add the Aruba-Common service and set Aruba-Priv-Admin-User to the group name.

Hide answer/explanation Discussion 0

Correct Answer: C [Vote an answer](#)

To assign managers to groups on the AOS-CX switch by name using HPE Aruba Networking ClearPass Policy Manager (CPPM) as a TACACS+ server, you should add the Aruba service to the TACACS+ enforcement profile and set the Aruba-Admin-Role to the group name. This configuration ensures that the appropriate administrative roles are assigned to managers based on their group membership, allowing for role-based access control on the AOS-CX switches.

QUESTION NO: 2
You are using OpenSSL to obtain a certificate signed by a Certification Authority (CA). You have entered this command:
openssl req -new -out file1.pem -newkey rsa-3072 -keyout file2.pem
Enter PEM pass phrase: _____
Verifying - Enter PEM pass phrase: _____
Country Name (2 letter code) [AU]: US
State or Province Name (full name) (Some-State): California
Locality Name (eg, city) []: Sunnyvale
Organization Name (eg, company) [Internet Widgits Pty Ltd]: example.com
Organizational Unit Name (eg, section) []: Infrastructure
Common Name (e.g. server FQDN or YOUR name) []: radius.example.com
What is one guideline for continuing to obtain a certificate?

- A. You should use a third-party tool to encrypt file2.pem before sending it and file1.pem to the CA.
- B. You should concatenate file1.pem and file2.pem into a single file, and submit that to the desired CA to sign.
- C. You should submit file1.pem, but not file2.pem, to the desired CA to sign.
- D. You should submit file2.pem, but not file1.pem, to the desired CA to sign.

Hide answer/explanation Discussion 0

Correct Answer: C [Vote an answer](#)

When using OpenSSL to obtain a certificate signed by a Certification Authority (CA), you should submit the Certificate Signing Request (CSR) file, which is file1.pem, to the CA. The CSR contains the information about the entity requesting the certificate and the public key, but not the private key, which is in file2.pem. The CA uses the information in the CSR to create and sign the certificate.
1. CSR Submission: The CSR (file1.pem) includes the public key and the entity information required by the CA to issue a certificate.

If you have any question about our HPE7-A02 test torrent, do not hesitate and remember to contact us. we are glad to help you solve your problem. If you buy our Aruba Certified Network Security Professional Exam guide torrent and take it seriously consideration, you will find you can take your exam after twenty to thirty hours' practice. So come to buy our HPE7-A02 Test Torrent, it will help you pass your exam and get the certification in a short time that you long to own.

Aruba is a well-known provider of networking solutions and has established itself as an industry leader in wireless networking, network access control, and network security. The HPE7-A02 Certification Exam focuses on Aruba's network security solutions and is an essential certification for IT professionals working with Aruba's products and solutions.

HPE7-A02 Latest Exam Materials - Valid HPE7-A02 Test Sample

The clients can download our products and use our HPE7-A02 study materials immediately after they pay successfully. Our system will send our HPE7-A02 learning prep in the form of mails to the client in 5-10 minutes after their successful payment. The mails provide the links and if only the clients click on the links they can log in our software immediately to learn our HPE7-A02 Guide materials. As long as the clients buy our HPE7-A02 training quiz they can immediately use our product and save their time.

HP Aruba Certified Network Security Professional Exam Sample Questions (Q100-Q105):

NEW QUESTION # 100

A company has AOS-CX switches, which authenticate clients to HPE Aruba Networking ClearPass Policy Manager (CPPM). CPPM is set up to receive a variety of information about clients' profile and posture. New information can mean that CPPM should change a client's enforcement profile. What should you set up on the switches to help the solution function correctly?

- **A. Enable dynamic authorization, and specify CPPM as a dynamic authorization client.**
- B. Configure a RADIUS track that references CPPM's FQDN or IP address.
- C. Re-configure the authentication server on the switch specifying CPPM as a TACACS server.
- D. Enable RADIUS accounting to CPPM, including interim RADIUS accounting.

Answer: A

Explanation:

* Dynamic Authorization for Enforcement Profile Updates:

* When CPPM receives updated client posture or profile data, it can initiate a Change of Authorization (CoA) to update enforcement profiles dynamically.

* To support this:

* Dynamic Authorization must be enabled on the switches.

* CPPM must be configured as a dynamic authorization client to send CoA requests.

* Option C: Correct. Dynamic authorization ensures that the switch can apply updated enforcement profiles based on new information from CPPM.

* Option A: Incorrect. RADIUS accounting provides session updates but does not enable dynamic changes to enforcement profiles.

* Option B: Incorrect. RADIUS track is for monitoring RADIUS server availability, not dynamic enforcement updates.

* Option D: Incorrect. TACACS is not used for dynamic authorization; RADIUS handles this functionality.

NEW QUESTION # 101

A company is implementing HPE Aruba Networking Wireless IDS/IPS (WIDS/WIPS) on its AOS-10 APs, which are managed in HPE Aruba Networking Central.

What is one requirement for enabling detection of rogue APs?

- **A. A Foundation with Security license for each of the APs**
- B. A manual radio profile that enables non-regulatory channels
- C. Each VLAN in the network assigned on at least one AP's or AM's port
- D. One AM deployed for every one AP deployed

Answer: A

Explanation:

To enable the detection of rogue APs with HPE Aruba Networking Wireless IDS/IPS (WIDS/WIPS) on AOS-10 APs managed in HPE Aruba Networking Central, each AP must have a Foundation with Security license. This license enables advanced security features, including rogue AP detection, which is crucial for maintaining a secure wireless environment and protecting against unauthorized access points.

NEW QUESTION # 102

You have installed an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch to monitor a particular function.

Which additional step must you complete to start the monitoring?

- **A. Create an agent from the script.**
- B. Enable NAE, which is disabled by default.
- C. Edit the script to define monitor parameters.
- D. Reboot the switch.

Answer: A

Explanation:

After installing an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch, the additional step required to start the monitoring is to create an agent from the script. The agent is responsible for executing the script and collecting the monitoring data as defined by the script parameters.

1. Script Installation: Installing the script provides the logic and parameters for monitoring.
2. Agent Creation: Creating an agent from the script activates the monitoring process, allowing the NAE to begin tracking the specified function.
3. Operational Step: This step ensures that the monitoring logic is applied and the data collection starts as per the script's configuration.

Reference: Aruba AOS-CX documentation and Network Analytics Engine guides outline the process of script installation and the necessity of creating an agent to activate monitoring.

NEW QUESTION # 103

You are using OpenSSL to obtain a certificate signed by a Certification Authority (CA). You have entered this command:

```
openssl req -new -out file1.pem -newkey rsa:3072 -keyout file2.pem
```

```
Enter PEM pass phrase: *****
```

```
Verifying - Enter PEM pass phrase: *****
```

```
Country Name (2 letter code) [AU]:US
```

```
State or Province Name (full name) [Some-State]:California
```

```
Locality Name (eg, city) []:Sunnyvale
```

```
Organization Name (eg, company) [Internet Widgits Pty Ltd]:example.com
```

```
Organizational Unit Name (eg, section) []:Infrastructure
```

```
Common Name (e.g. server FQDN or YOUR name) []:radius.example.com
```

What is one guideline for continuing to obtain a certificate?

- A. You should submit file1.pem, but not file2.pem, to the desired CA to sign.
- B. You should submit file2.pem, but not file1.pem, to the desired CA to sign.
- C. You should concatenate file1.pem and file2.pem into a single file, and submit that to the desired CA to sign.
- D. You should use a third-party tool to encrypt file2.pem before sending it and file1.pem to the CA.

Answer: A

Explanation:

When using OpenSSL to obtain a certificate signed by a Certification Authority (CA), you should submit the Certificate Signing Request (CSR) file, which is file1.pem, to the CA. The CSR contains the information about the entity requesting the certificate and the public key, but not the private key, which is in file2.pem.

The CA uses the information in the CSR to create and sign the certificate.

1. CSR Submission: The CSR (file1.pem) includes the public key and the entity information required by the CA to issue a certificate.
2. Private Key Security: The private key (file2.pem) should never be sent to the CA or shared; it remains securely stored on the requestor's server.
3. Certificate Issuance: After the CA signs the CSR, the resulting certificate can be used with the private key to establish secure communications.

NEW QUESTION # 104

HPE Aruba Networking Central displays an alert about an Infrastructure Attack that was detected. You go to the Security > RAPIDS events and see that the attack was "Detect adhoc using Valid SSID." What is one possible next step?

- A. Look for the IP address associated with the offender and then check for that IP address among HPE Aruba Networking Central clients.
- B. Make sure that you have tuned the threshold for that check, as false positives are common for it.
- C. Use HPE Aruba Networking Central floorplans or the detecting AP identities to locate the general area for the threat.
- D. Make sure that clients have updated drivers, as faulty drivers are a common explanation for this attack type.

Answer: C

Explanation:

When HPE Aruba Networking Central detects an Infrastructure Attack, such as "Detect adhoc using Valid SSID," the next step is to locate the general area of the threat. You can use HPE Aruba Networking Central floorplans or the identities of the detecting APs to pinpoint the approximate location of the adhoc network.

This allows you to physically investigate and address the source of the threat, ensuring that unauthorized or rogue networks are

quickly identified and mitigated.

Reference: Aruba Central documentation and RAPIDS events management guides offer strategies for locating and responding to detected security threats, emphasizing the use of network tools and floorplans to effectively address potential vulnerabilities.

NEW QUESTION # 105

.....

Everybody wants success, but not everyone has a strong mind to persevere in study. If you feel unsatisfied with your present status, our HPE7-A02 actual exam can help you out. Our HPE7-A02 exam questions always boast a pass rate as high as 99%. Using our study materials can also save your time in the exam preparation. If you choose our HPE7-A02 Test Engine, you are going to get the certification easily. Just make your choice and purchase our HPE7-A02 study materials and start your study right now! Knowledge, achievement and happiness are waiting for you!
