There is an irreplaceable trend that an increasingly amount of clients are picking up NCP-DB-6.10 study materials from tremendous practice materials in the market. There are unconquerable obstacles ahead of us if you get help from our NCP-DB-6.10 Exam Questions. So many exam candidates feel privileged to have our NCP-DB-6.10 practice braindumps. And our website is truly very famous for the hot hit in the market and easy to be found on the internet.

To maintain relevancy and top standard of Nutanix NCP-DB-6.10 exam questions, the ActualCollection has hired a team of experienced and qualified Nutanix NCP-DB-6.10 exam trainers. They work together and check every NCP-DB-6.10 exam practice test question thoroughly and ensure the top standard of NCP-DB-6.10 Exam Questions all the time. So you do not need to worry about the relevancy and top standard of Nutanix NCP-DB-6.10 exam practice test questions.

## Training NCP-DB-6.10 Pdf | NCP-DB-6.10 Demo Test

With all the questions and answers of our NCP-DB-6.10 study materials, your success is 100% guaranteed. Moreover, we have Demos as freebies. The free demos give you a prove-evident and educated guess about the content of our NCP-DB-6.10 practice questions. As long as you make up your mind on this NCP-DB-6.10 Exam, you can realize their profession is unquestionable. And you will be surprised to find the high-quality of our NCP-DB-6.10 exam braindumps.

### Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q154-Q159):

#### NEW QUESTION # 154

An administrator needs to migrate a large I/O-intensive database that doesn't support multi-disk layout. How should the storage be provisioned with Era to support the database while optimizing performance?

- **A. Volume Group**
- B. Volume Group with Load Balancing
- C. Storage Spaces
- D. vDisk based provisioning

**Answer: A**

Explanation:

In Nutanix Era, a Volume Group is the recommended storage provisioning method for a large I/O-intensive database that doesn't support a multi-disk layout. A Volume Group in Nutanix Era is a collection of disks that can be managed as a single entity, providing a way to aggregate the storage capacity of multiple disks into a larger storage unit. This allows for better performance optimization as it enables the database to leverage the combined I/O capabilities of all the disks in the group. It's important to note that while other options like Load Balancing, Storage Spaces, and vDisk based provisioning can also be used in certain scenarios, a Volume Group is specifically designed for situations where a single, high-performance storage unit is required.

#### NEW QUESTION # 155

An administrator is tasked with providing a Jr DBA with access to NDB with limited capabilities. This user should only be able to:

- Provision Databases
- Provision Database Servers
- Create Ones
- Refresh Clones
- Patch Database Servers

How can the administrator complete this task?

- **A. Create a role with only those privileges, assign the role to the Jr DBA user.**
- B. Create a user for the Jr DBA, and assign only those privileges.
- C. Clone the Database Admin role, and remove all but the desired privileges.
- D. Clone the Database Admin role, and add the desired privileges.

**Answer: A**

Explanation:

The correct answer is B because it allows the administrator to create a custom role with the specific privileges that the Jr DBA user needs, and then assign that role to the user. This way, the administrator can control the access level of the Jr DBA user without affecting the existing roles or users in NDB.

#### NEW QUESTION # 156

In NDB, which two Time Machine options are available when creating a database clone? (Choose two.)

- A. Backup
- **B. Snapshot**
- C. Restore point
- **D. Point in time**

**Answer: B,D**

Explanation:

The correct answer is A and D because these are the two Time Machine options that are available when creating a database clone in NDB. Point in time allows the user to specify a date and time to create a clone from a specific point in the database history. Snapshot allows the user to select a previously taken snapshot to create a clone from a consistent state of the database. Option B is incorrect because Restore point is not a Time Machine option, but a feature that allows the user to restore a source database to a previous point in time. Option C is incorrect because Backup is not a Time Machine option, but a feature that allows the user to backup a database to a remote location.

#### NEW QUESTION # 157

An administrator needs to enable multi-cluster to setup NDB HA. What should the administrator configure for the NDB Agent to satisfy this requirement?

- A. Name Prefix
- B. Compute Profile
- C. Network Profile
- D. Static VLAN

**Answer: C**

Explanation:

To enable multi-cluster setup for NDB High Availability (HA), the administrator must configure the NDB Agent with a Network Profile. A Network Profile defines the networking settings (e.g., VLANs, IP ranges) that the NDB Agent uses to communicate across clusters. This is critical for multi-cluster HA, as it ensures consistent network configuration for replication, failover, and data synchronization between clusters. The Network Profile must be properly configured to handle inter-cluster traffic and latency requirements (e.g., <25ms RTT).

#### NEW QUESTION # 158

Which site needs to be reachable to ensure an NDB server can send periodic telemetry data to the central Nutanix repository over port 443?

- A. download.nutanix.com
- B. insights.nutanix.com
- C. developers.nutanix.com
- D. portal.nutanix.com

**Answer: B**

Explanation:

To ensure an NDB server can send periodic telemetry data to the central Nutanix repository, the server must be able to communicate with the Nutanix Insights platform over port 443 (HTTPS).

The insights.nutanix.com site is the designated endpoint for telemetry data, which includes usage statistics, health metrics, and other operational data sent to Nutanix for support and analytics purposes. This connectivity is a standard requirement for NDB to comply with Nutanix's telemetry and support framework, and port 443 is used for secure transmission.

#### NEW QUESTION # 159

.....

The whole payment process on our NCP-DB-6.10 exam braindumps only lasts a few seconds as long as there has money in your credit card. Then our system will soon deal with your orders according to the sequence of payment. Usually, you will receive the NCP-DB-6.10 Study Materials no more than five minutes. Then you can begin your new learning journey of our NCP-DB-6.10 preparation questions. All in all, our payment system and delivery system are highly efficient.
