

# Quiz Zscaler - ZDTE - Zscaler Digital Transformation Engineer–Professional Exam Forum

**Zscaler Digital Transformation Engineer ZDTE 2026  
Practice Exam with 300 Questions and Correct  
Answers / ZDTE Certification Practice Test 2026**

*Questions and Answers derived from EDU 200*

In Zscaler Private Access policy, which criteria can be used to control access?  
(Select 3)

Options

- Zero Trust Exchange data center
- SAML or SCIM Attribute
- Client Connector Posture and Trusted Network
- Client Type
- Zscaler Internet Access Enabled

SAML or SCIM Attribute  
Client Connector Posture and Trusted Network  
Client Type

Which are the acceptable actions for Firewall policy? (Select 3)

Options:

- Allow
- Block/Drop
- Block/Reset
- Block/FIN+ACK
- Redirect

Allow  
Block/Drop  
Block/Reset

What options for TLS Inspection Certificates are available? (Select 2)

Options:

pg. 1

The Zscaler ZDTE dumps are given regular update checks in case of any update. We make sure that candidates are not preparing for the Zscaler ZDTE exam from outdated and unreliable ZDTE study material. PracticeDump offers you a free demo version of the Zscaler ZDTE Dumps. This way candidates can easily check the validity and reliability of the ZDTE exam products without having to spend time.

As our loyal customer, some of them will choose different types of ZDTE study materials on our website. As you can see, they still keep up with absorbing new knowledge of our ZDTE training questions. Once you cultivate the good habit of learning our study materials, you will benefit a lot and keep great strength in society. Also, our ZDTE practice quiz has been regarded as the top selling products in the market. We have built our own reputation in the market.

## Exam ZDTE Questions Answers & Dumps ZDTE Free

Our ZDTE exam questions are authoritatively certified. Our goal is to help you successfully pass relevant ZDTE exam in an efficient learning style. Due to the quality and reasonable prices of our ZDTE training materials, our competitiveness has always been a leader

in the world. Our ZDTE Learning Materials have a higher pass rate than other training materials, so we are confident to allow you to gain full results. With our ZDTE exam questions, your success is guaranteed.

## Zscaler Digital Transformation Engineer Sample Questions (Q44-Q49):

### NEW QUESTION # 44

What is the primary function of ZIA Public Service Edges in the Cloud Firewall architecture?

- **A. Acting as key policy enforcement engines**
- B. Load balancing internet traffic
- C. Providing cloud storage services
- D. Managing endpoint security updates

**Answer: A**

Explanation:

Within the ZIA Cloud Firewall and broader Zscaler Internet Access architecture, Public Service Edges (PSEs) are the core policy enforcement points. User traffic is steered (via tunnels, PAC files, or agents) to the nearest PSE, where Zscaler performs security inspection and policy evaluation. At this point, the Cloud Firewall, URL filtering, SSL inspection, IPS, sandboxing, and other security engines are applied according to the user's identity, group, location, and defined policies.

Although the PSEs naturally participate in traffic distribution across the global Zscaler cloud, their primary purpose is not generic load balancing or network transit; rather, they host the full security stack and make real-time allow/deny/log decisions. They also enforce bandwidth controls, application rules, and advanced threat protections before forwarding allowed traffic to the internet.

They are not responsible for managing endpoint security updates or providing general cloud storage. Instead, they serve as inline security gateways that enforce Zero Trust access and granular firewall rules at scale.

Therefore, the correct description of their role in the Cloud Firewall architecture is that they act as key policy enforcement engines.

### NEW QUESTION # 45

Customers would like to use a PAC file to forward web traffic to a Subcloud. Which one below uses the correct variables for the required PAC file?

- **A. {GATEWAY.<Subcloud>.<Zscaler cloud>}**
- B. {<Subcloud>.REGION.<Zscaler cloud>}
- C. {<Subcloud>.GATEWAY.<Zscaler cloud>}
- D. {REGION.<Subcloud>.<Zscaler cloud>}

**Answer: A**

Explanation:

In Zscaler's PAC file guidance for directing traffic to specific Subclouds, the fully qualified proxy host name is constructed using the standard gateway label, followed by the subcloud identifier, and then the Zscaler cloud domain. In template form, this is represented as:

```
{GATEWAY.<Subcloud>.<Zscaler cloud>}
```

Here, GATEWAY corresponds to the Zscaler gateway label, <Subcloud> is the dynamically assigned subcloud (which helps optimize routing and resiliency), and <Zscaler cloud> represents the customer's Zscaler cloud domain (for example, one of the standard ZIA cloud domains). The Digital Transformation Engineer training emphasizes that using the correct order of these variables ensures that browsers resolve to the appropriate subcloud-specific gateway, enabling optimized performance and regional affinity.

Options B and C incorrectly introduce or misplace a REGION label, which does not match the documented variable order when explicitly targeting a Subcloud. Option D reverses the positions of GATEWAY and

<Subcloud>, which does not align with the hostname structure used by Zscaler for subcloud-aware PAC configurations.

Therefore, the correct PAC variable pattern for forwarding web traffic specifically to a Subcloud is

```
{GATEWAY.<Subcloud>.<Zscaler cloud>}
```

### NEW QUESTION # 46

What feature enables Zscaler logs to be sent to SIEM solutions for long-term storage?

- A. Zero Trust Exchange Query Engine
- B. Log Recovery Service
- **C. Log Streaming Services**

- D. Role-Based Access Control (RBAC)

**Answer: C**

Explanation:

Zscaler provides specialized Log Streaming Services to export logs from the Zero Trust Exchange into external SIEM or log-analytics platforms for long-term storage and advanced analysis. For Zscaler Private Access (ZPA), the Log Streaming Service (LSS) forwards user activity, user status, App Connector metrics, and other diagnostic logs to a log receiver, which is typically a SIEM, syslog collector, or similar downstream system. Zscaler documentation notes that customers use LSS specifically to store logs beyond the default cloud retention period and to support external analytics and compliance use cases.

On the ZIA side, Nanolog Streaming Service (NSS) fulfills a similar purpose, streaming web and firewall logs from the Zscaler Nanolog cluster into SIEM solutions. Together, these streaming services give organizations centralized visibility and long-term retention while keeping the Zscaler cloud optimized for inline inspection and near-term reporting.

Role-Based Access Control (RBAC) governs who can view or manage configurations, not how logs are exported. The Zero Trust Exchange query or insights interfaces are used for in-portal searching and visualization, and "Log Recovery Service" is not the Zscaler term used for SIEM integration in ZDTE materials. Therefore, Log Streaming Services is the correct answer because it is the named mechanism for streaming Zscaler logs to external SIEM platforms for long-term storage.

#### NEW QUESTION # 47

An engineer attempted to push a configuration using an API call to an endpoint but received a 409 response code. What was the reason for the error response code?

- A. Resource does not exist
- B. Request is not complete due to incorrect syntax
- C. Exceeded the rate limit or quota
- D. Edit conflict occurred

**Answer: D**

Explanation:

In the context of Zscaler's public APIs, HTTP status code 409 indicates a conflict with the current state of the target resource, most commonly an edit conflict. When configuration is managed via API, Zscaler uses versioning or similar concurrency controls to ensure that two administrators or systems do not overwrite each other's changes unintentionally. A 409 response typically appears when the payload being pushed is based on an outdated version of the object or when another change has been committed between the time the configuration was retrieved and the time the update was sent.

The Digital Transformation Engineer documentation explains that clients should first retrieve the latest configuration (often including a version or ETag-like value), apply their modifications, and then push the update. If the server detects that the version in the request no longer matches the current version, it returns

409 Conflict to signal that the update cannot be safely applied.

The other options map to different HTTP codes: rate limit or quota issues are indicated by 429 Too Many Requests, non-existent resources by 404 Not Found, and syntax or malformed payloads by 400 Bad Request

. Thus, for a 409 response during a configuration push, the correct interpretation is an edit conflict.

#### NEW QUESTION # 48

Which tunnel mode supports both web and non-web applications, ensuring comprehensive security for modern enterprises?

- A. Z-Tunnel 2.0
- B. Z-Tunnel 1.0
- C. GRE Tunnel
- D. IPSec Tunnel

**Answer: A**

Explanation:

Zscaler Client Connector supports multiple tunnel modes to send user traffic to the Zscaler security cloud. In the Digital Transformation Engineer material, Z-Tunnel 2.0 is described as the recommended and most capable mode because it supports both web and non-web applications across all ports and protocols. This enables comprehensive inspection and Zero Trust policy enforcement for SaaS, web, and private applications from a single, unified tunnel.

Z-Tunnel 1.0 was primarily designed for web traffic, with limitations around non-web protocols and certain advanced use cases. As

enterprises adopt more modern and diverse application stacks (VoIP, collaboration tools, custom TCP/UDP apps), Z-Tunnel 1.0 often cannot provide full coverage. GRE and IPSec tunnels (options A and C) are typically used for site-to-cloud connectivity from branch or data center routers, not as endpoint-based tunnels from user devices.

Z-Tunnel 2.0 uses an advanced encapsulation mechanism that can simultaneously support ZIA and ZPA, apply granular user- and device-based policies, and provide rich telemetry for analytics. It is explicitly positioned in Zscaler's training as the tunnel mode that delivers end-to-end protection for both web and non- web traffic, making it the correct answer for enterprises needing broad, modern coverage.

## NEW QUESTION # 49

.....

For the peace of your mind, you can also try a free demo of Zscaler ZDTE Dumps practice material. You will not find such affordable and latest material for Zscaler certification exam anywhere else.
