問題 #71

What is the typical duty cycle of a microwave oven?

- A. 0.05
- B. 0.25
- C. 0.5
- D. 0.1

答案: C

解題說明:

A microwave oven typically has a duty cycle of about 50% (0.5) when operating, meaning it emits RF energy approximately half of the time, which can significantly interfere with WLAN signals in the 2.4 GHz band.

問題 #72

Your organization would like to give their network field engineers a tool to provide an overview of a given wireless LAN environment. They are interested in how many SSIDs are enabled per radio, channels used, and the number of APs per channel. They do not want to require the engineers to view multiple frames to determine the information. Which tool would you recommend that provides this information at the lowest cost?

- A. Spectrum Analyzer
- B. WLAN Scanner
- C. Protocol Analyzer
- D. Site Survey Software

答案: B

解題說明:

A WLAN scanner is the lowest-cost tool that quickly shows SSIDs per radio, channel usage, and the number of APs per channel without requiring detailed frame analysis. It provides a clear overview of the WLAN environment, making it ideal for field engineers.

問題 #73

You need to determine RF activity over time in a spectrum analyzer. It is to be able to see the activity and the amplitude of that activity.

What kind of view should be used?

- A. Channel listing
- B. Real-time FFT
- C. Device listing
- D. Swept spectrogram

答案: D

解題說明:

The FFT shows spectral activity in the frequency domain, while waterfall or swept spectrogram views attempt to represent RF activity over time

問題 #74

The network administrator at ABC Engineering has taken a large packet capture from one of their APs running in monitor mode. She has very little knowledge of 802.11 protocols but would like to use the capture file to evaluate the overall health and performance of their wireless network. When she asks your advice, which tool do you recommend she opens the packet capture file with?

- A. Python
- B. WLAN scanner

- C. Capture visualization tool
- D. Spectrum analyzer

答案： C

解題說明：

A capture visualization tool is a software application that can open a packet capture file and display various graphs, charts, tables, and statistics that illustrate the characteristics and behavior of the wireless network. A capture visualization tool can help a network administrator with little knowledge of 802.11 protocols to evaluate the overall health and performance of their wireless network by providing a visual and intuitive representation of the captured data. A spectrum analyzer is a hardware device that measures the radio frequency signals in a given frequency range and displays their amplitude, frequency, and modulation. A spectrum analyzer can help identify sources of interference and noise in the wireless environment, but it cannot open a packet capture file. Python is a programming language that can be used to write scripts or applications that manipulate or analyze packet capture files, but it requires coding skills and knowledge of

802.11 protocols. A WLAN scanner is a software application that scans for available wireless networks and displays information such as SSID, BSSID, channel, signal strength, security type, and vendor. A WLAN scanner can help discover wireless networks and their basic parameters, but it cannot open a packet capture file. 345 References:

問題 #75

You are analyzing a packet decode of a Probe Request and notice the SSID element has a length of zero. What do you conclude about the transmitting STA?

- A. The STA is operating in Ad-Hoc mode
- B. The WLAN adaptor is configured in promiscuous mode
- C. The STA's WLAN adaptor is disabled
- D. The STA is discovering a list of available BSSs

答案： D

解題說明：

An SSID element with a length of zero in a Probe Request indicates a broadcast probe. This is used by a station to solicit Probe Responses from any nearby access point, allowing it to discover which BSSs are available without targeting a specific SSID.
