Cisco Designing Cisco Enterprise Wireless Networks Sample Questions (Q162-Q167):

NEW QUESTION # 162
A customer is running a guest WLAN with a foreign/export-anchor setup. There is one anchor WLC in the US and two in Europe. Anchor WLC priorities are used to prefer local anchors. During a routine network audit, it is discovered that a large number of guest client sessions in the US are anchored to the WLCs in Europe. Which reason explains this behavior?

- A. The foreign WLC failed and recovered.
- B. The anchor WLC is in the same mobility group.
- C. The US anchor WLC is anchored to itself with a priority value of zero.
- D. The US anchor WLC failed and recovered.

Answer: D

Explanation:
The behavior of guest client sessions in the US being anchored to the WLCs in Europe despite the presence of a local anchor WLC can be explained by the failure and subsequent recovery of the US anchor WLC. During the failure, the guest sessions would have been transferred to the European WLCs. After recovery, if the priority settings were not correctly restored or if the system did not automatically revert back to the local anchor, the sessions would remain anchored to the European WLCs.

NEW QUESTION # 163
A wireless consultant reviewing the installation of an old wireless network. The existing AireOS controllers are running software version 6.0.4539:44024. The customer is using OEAP and wants to keep this functionality. Which licenses should the consultant propose with the latest controller software version?

- A. WPlus
- B. Premium
- C. Base
- D. Advanced

Answer: A

NEW QUESTION # 164
You made changes to a VLAN, but the changes were not propagated to the other switches in the VTP domain.
You enter a show vtp command at the switch where the changes were made, which displays the following output:
What should you do to solve this problem?

- A. Change the VTP operating mode to server.
- B. Disable VTP pruning.
- C. Upgrade the VTP version to version 3.
- D. Upgrade the VTP version to version 2.

Answer: A

Explanation:

The output of the show vtp command shows that the VTP operating mode is transparent mode. This means that you can make VLAN changes on the switch, but they will only affect that switch. Changes will not be propagated to other switches in the Layer 2 network. You will need to change the operating mode to server if you want to VLAN changes to be propagated to other switches. To change the VTP operating mode to server, you would enter the vtp server global command as shown:

switch1#(config) vtp server

You should not disable VTP pruning. This will have no effect on the propagation. You must change the mode of the switch.

You should not upgrade the VTP version to version 2 or version 3. This will have no effect on the propagation. You must change the mode of the switch.

Objective:

Layer 2 Technologies

Sub-Objective:

Configure and verify trunking

NEW QUESTION # 165

An engineer must perform a Layer 2 survey for a mining facility. Which type of antenna does the engineer use in the mine shaft?

- A. dipole
- B. patch
- C. omnidirectional
- D. internal

Answer: B

Explanation:

Mine shafts are long narrow corridors, you would get more use out of a patch antenna as you don't require signal in all directions and the gain increase to reach further down the shaft.

NEW QUESTION # 166

A network administrator is troubleshooting a DMVPN setup between the hub and the spoke. Which action should the administrator take before troubleshooting the IPsec configuration?

- A. Verify the GRE tunnels.
- B. Verify NHRP.
- C. Verify crypto maps.
- D. Verify ISAKMP.

Answer: A
