ANS-C01 Certification Sample Questions & Valid ANS-C01 Test Camp

2026 Latest GuideTorrent ANS-C01 PDF Dumps and ANS-C01 Exam Engine Free Share: https://drive.google.com/open?id=1EDnF50Y1MKrlY9F-2R-7BUaKrH3B0_k4

Our ANS-C01 latest preparation materials provide users with three different versions, including a PDF version, a software version, and an online version. Although involved three versions of the ANS-C01 teaching content is the same, but for all types of users can realize their own needs, whether it is which version of ANS-C01 Learning Materials, believe that can give the user a better ANS-C01 learning experience. Below, I would like to introduce you to the main advantages of our research materials, and I'm sure you won't want to miss it.

The ANS-C01 Exam consists of 65 multiple-choice and multiple-response questions, and candidates have 170 minutes to complete the exam. ANS-C01 exam covers a range of topics, including network design and implementation, network optimization and troubleshooting, AWS networking services, and network security and compliance.

Valid Amazon ANS-C01 Test Camp & ANS-C01 PDF Cram Exam

Not only that our ANS-C01 exam questions can help you pass the exam easily and smoothly for sure and at the same time you will find that the ANS-C01 guide materials are valuable, but knowledge is priceless. These professional knowledge will become a springboard for your career, help you get the favor of your boss, and make your career reach it is peak. What are you waiting for? Come and take ANS-C01 Preparation questions home.

Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q178-Q183):

NEW QUESTION # 178
You need to find the subnet, the security group and the VPC that your instance is associated with. You only have access to the terminal of an instance with an admin role attached.
What is the first part of the command you would use?

Response:

- A. aws ec2 describe-network-acl
- B. aws ec2 describe-security-groups
- C. aws ec2 describe-instances
- D. aws vpc describe-all

Answer: C

NEW QUESTION # 179

A company is developing a new application that is deployed in multiple VPCs across multiple AWS Regions. The VPCs are connected through AWS Transit Gateway. The VPCs contain private subnets and public subnets.

All outbound internet traffic in the private subnets must be audited and logged. The company's network engineer plans to use AWS Network Firewall and must ensure that all traffic through Network Firewall is completely logged for auditing and alerting.

How should the network engineer configure Network Firewall logging to meet these requirements?

- A. Configure Network Firewall logging by configuring AWS CloudTrail to capture data events.
- B. Configure Network Firewall logging in Amazon CloudWatch to capture all alerts. Send the logs to a log group in Amazon CloudWatch Logs.
- C. Configure Network Firewall logging in Network Firewall to capture all alerts and flow logs.
- D. Configure Network Firewall logging by configuring VPC Flow Logs for the firewall endpoint. Send the logs to a log group in Amazon CloudWatch Logs.

Answer: C

NEW QUESTION # 180

You plan to create a proxy server using an EC2 instance. Instances will be created on an private subnet, and will send Internet traffic to the proxy server.

The proxy server must be able to connect to resources on the Internet. The proxy server should present a consistent IP address that does not change to the Internet. Which design is ideal?

Response:

- A. Create a dual-homed instance on the private subnet and attach an ENI on the public subnet
- B. Create a dual-homed instance on the public subnet and configure VPC Peering to the private subnet
- C. Create a dual-homed instance on the public subnet and attach an ENI on the private subnet
- D. Create a dual-homed instance on the public subnet and configure an VPC endpoint on the private subnet

Answer: A

NEW QUESTION # 181

What is the purpose of connection draining?

Response:

- A. To migrate traffic to a new web target group in a blue-green environment
- B. To ensure that in-flight requests are completed prior to terminating instances
- C. To ensure that sessions will use a consistent EC2 instance
- D. To equalize connections across a target group

Answer: B

NEW QUESTION # 182

A company has deployed a critical application on a fleet of Amazon EC2 instances behind an Application Load Balancer. The application must always be reachable on port 443 from the public internet. The application recently had an outage that resulted from an incorrect change to the EC2 security group.

A network engineer needs to automate a way to verify the network connectivity between the public internet and the EC2 instances whenever a change is made to the security group. The solution also must notify the network engineer when the change affects the

connection.
Which solution will meet these requirements?

- A. Create a VPC Reachability Analyzer path on port 443. Specify the security group as the source.
  Specify the EC2 instances as the destination. Create an Amazon Simple Notification Service (Amazon SNS) topic to notify the network engineer when a change to the security group affects the connection. Create an AWS Lambda function to start Reachability Analyzer and to publish a message to the SNS topic in case the analyses fail Create an Amazon EventBridge (Amazon CloudWatch Events) rule to invoke the Lambda function when a change to the security group occurs.
- B. Enable VPC Flow Logs on the elastic network interface of each EC2 instance to capture REJECT traffic on port 443. Publish the flow log records to a log group in Amazon CloudWatch Logs.
  Create a CloudWatch Logs metric filter for the log group for rejected traffic. Create an alarm to notify the network engineer.
- C. Create a VPC Reachability Analyzer path on port 443. Specify the internet gateway of the VPC as the source. Specify the EC2 instances as the destination. Create an Amazon Simple Notification Service (Amazon SNS) topic to notify the network engineer when a change to the security group affects the connection. Create an AWS Lambda function to start Reachability Analyzer and to publish a message to the SNS topic in case the analyses fail. Create an Amazon EventBridge (Amazon CloudWatch Events) rule to invoke the Lambda function when a change to the security group occurs.
- D. Enable VPC Flow Logs on the elastic network interface of each EC2 instance to capture all traffic on port 443. Publish the flow log records to a log group in Amazon CloudWatch Logs. Create a CloudWatch Logs metric filter for the log group for all traffic. Create an alarm to notify the network engineer

Answer: C

Explanation:
The question requires - "automate a way to verify the network connectivity between the public internet and the EC2 instances", not just on failed connections. By implementing automated reachability assessment using Reachability Analyzer, application issues due to connectivity problems are detected quickly.
Below post demonstrates an automated method to verify network connectivity between VPC elements after an infrastructure change is made, and alert administrators in the event reachability has been affected.
https://aws.amazon.com/blogs/networking-and-content-delivery/automating-connectivity- assessments-with-vpc-reachability-analyzer/ Application load Balancer is supported as intermediary path in the reachability analyzer.

NEW QUESTION # 183
......

Amazon ANS-C01 certifications are thought to be the best way to get good jobs in the high-demanding market. There is a large range of ANS-C01 certifications that can help you improve your professional worth and make your dreams come true. Our AWS Certified Advanced Networking Specialty Exam ANS-C01 Certification Practice materials provide you with a wonderful opportunity to get your dream certification with confidence and ensure your success by your first attempt.
