Study CompTIA 220-1102 Dumps | 220-1102 Exam Tutorials

Our 220-1102 exam guide has high quality of service. We provide 24-hour online service on the 220-1102 training engine. If you have any questions in the course of using the bank, you can contact us by email. We will provide you with excellent after-sales service with the utmost patience and attitude. And we will give you detailed solutions to any problems that arise during the course of using the 220-1102 learning braindumps. And our 220-1102 study materials welcome your supervision and criticism.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q189-Q194):

NEW QUESTION # 189

A technician is working with a company to determine the best way to transfer sensitive personal information between offices when conducting business. The company currently uses USB drives and is resistant to change. The company's compliance officer states that all media at rest must be encrypted. Which of the following would be the BEST way to secure the current workflow?

- A. Deploy a secondary hard drive with encryption on the appropriate workstation
- B. Require files to be individually password protected with unique passwords
- C. Configure a hardened SFTP portal for file transfers between file servers
- D. Enable BitLocker To Go with a password that meets corporate requirements

Answer: D

Explanation:

The BEST way to secure the current workflow of transferring sensitive personal information between offices when conducting business is to enable BitLocker To Go with a password that meets corporate requirements. This is because BitLocker To Go is a full-disk encryption feature that encrypts all data on a USB drive, which is what the company currently uses, and requires a password to access the data.

NEW QUESTION # 190

A technician is troubleshooting a smartphone that is unable to download and install the latest OS update. The technician notices the device operates more slowly than expected, even after rebooting and closing all applications. Which of the following should the technician check next?

- A. Battery charge level
- B. Application permissions
- C. Wi-Fi connection speed
- D. Available storage space

Answer: D

Explanation:

When a smartphone is unable to download and install the latest OS update and is operating slower than expected, one of the first things to check is the available storage space. Operating system updates often require a significant amount of free space for downloading and installing, and insufficient space can prevent the update process from initiating or completing.

Available Storage Space: Smartphones use their internal storage to hold the OS, apps, user data, and temporary files needed for updates. If the storage is nearly full, the device can slow down due to the lack of space for writing temporary files and may not have enough space to download and install updates.

Clearing up space can resolve these issues.

Checking application permissions (A) might be relevant for specific app-related issues but is less likely to affect OS updates. The battery charge level (C) can affect the initiation of an update, as some devices require a minimum charge level to start the update process, but it doesn't typically cause slow operation. While a stable Wi-Fi connection (D) is necessary for downloading updates, it's less likely to be the cause of slowed operation and update issues compared to insufficient storage space.

NEW QUESTION # 191

A technician needs to format a USB drive to transfer 20GB of data from a Linux computer to a Windows computer. Which of the following filesystems will the technician MOST likely use?

- A. exFAT
- B. NTFS
- C. FAT32
- D. ext4

Answer: B

Explanation:

Since Windows systems support FAT32 and NTFS "out of the box" and Linux supports a whole range of them including FAT32 and NTFS, it is highly recommended to format the partition or disk you want to share in either FAT32 or NTFS, but since FAT32 has a file size limit of 4.2 GB, if you happen to work with huge files, then it is better you use NTFS

NEW QUESTION # 192

An office is experiencing constant connection attempts to the corporate Wi-Fi. Which of the following should be disabled to mitigate connection attempts?

SSID

- A. Firewall
- B. SSD
- C. DHCP

Answer: C

Explanation:

The SSID (Service Set Identifier) is the name of a wireless network that is broadcasted by the router or the Wi-Fi base station. The SSID helps nearby devices to identify and connect to the available networks. However, broadcasting the SSID also exposes the network to potential connection attempts from unauthorized or malicious users. Therefore, disabling the SSID can mitigate connection attempts by making the network invisible or hidden to the devices that are not already connected to it. To connect to a hidden network, the user would need to know the exact SSID and enter it manually.

The other options are not related to mitigating connection attempts to the corporate Wi-Fi. DHCP (Dynamic Host Configuration Protocol) is a protocol that assigns IP addresses to the devices on a network. Firewall is a software or hardware device that filters the incoming and outgoing network traffic based on predefined rules. SSD (Solid State Drive) is a type of storage device that uses flash memory to store data. Disabling any of these options would not prevent connection attempts to the Wi-Fi network, and may cause other problems or issues for the network functionality and performance.

Reference:

What is SSID + how to find (and change) it¹

Choosing an SSID²

SSID Meaning: Finding Your Network's Name³

NEW QUESTION # 193

Before leaving work, a user wants to see the traffic conditions for the commute home. Which of the following tools can the user employ to schedule the browser to automatically launch a traffic website at 4:45 p.m.?

- A. lusrmgr.msc
- B. Eventvwr.msc
- C. taskschd.msc
- D. perfmon.msc

Answer: C

Explanation:

The user can use the Task Scheduler (taskschd.msc) to schedule the browser to automatically launch a traffic website at 4:45 p.m. The Task Scheduler is a tool in Windows that allows users to schedule tasks to run automatically at specified times or in response to certain events.

NEW QUESTION # 194

.....

Our specialists check daily to find whether there is an update on the 220-1102 study tool. If there is an update system, we will automatically send it to you. Therefore, we can guarantee that our 220-1102 test torrent has the latest knowledge and keep up with the pace of change. Many people are worried about electronic viruses of online shopping. But you don't have to worry about our products. Our 220-1102 Exam Materials are absolutely safe and virus-free. If you encounter installation problems, we have professional IT staff to provide you with remote online guidance. We always put your needs in the first place.

Study 220-1102 Dumps: <https://www.troytecdumps.com/220-1102-troytec-exam-dumps.html>

TroytecDumps provides accurate and up-to-date CompTIA 220-1102 Exam Questions that ensure exam success, We can not only guarantee you 100% pass 220-1102 valid exam practice certification exam, but also provide you with a free year update of 220-1102 updated study material, We care for your condition and hence We at TroytecDumps, are working hard to provide you with the best and finest TroytecDumps 220-1102 exam preparation material which not only increase enough knowledge to make you well aware with the test but also assure you a TroytecDumps 220-1102 exam success in the first try, At the same time, there are specialized staffs to check whether the Study 220-1102 Dumps - CompTIA A+ Certification Exam: Core 2 test torrent is updated every day.

Understand pipeline workflows to streamline testing and deployments, After getting to know the respective features of the three versions of 220-1102 actual collection: CompTIA A+ Certification Exam: Core 2, you can choose on your own.
