

# Free PDF Trustable NetSec-Analyst - Palo Alto Networks Network Security Analyst Brain Dumps

2026 Latest Dumpleader NetSec-Analyst PDF Dumps and NetSec-Analyst Exam Engine Free Share:  
[https://drive.google.com/open?id=1KvG\\_aiath-EXFjv7v6428EFnybmDyHZO](https://drive.google.com/open?id=1KvG_aiath-EXFjv7v6428EFnybmDyHZO)

The world is changing, so we should keep up with the changing world's step as much as possible. Our Dumpleader has been focusing on the changes of NetSec-Analyst exam and studying in the exam, and now what we offer you is the most precious NetSec-Analyst test materials. After you purchase our dump, we will inform you the NetSec-Analyst update messages at the first time; this service is free, because when you purchase our study materials, you have bought all your NetSec-Analyst exam related assistance.

## Palo Alto Networks NetSec-Analyst Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Troubleshooting: This section of the exam measures the skills of Technical Support Analysts and covers the identification and resolution of configuration and operational issues. It includes troubleshooting misconfigurations, runtime errors, commit and push issues, device health concerns, and resource usage problems. This domain ensures candidates can analyze failures across management systems and on-device functions, enabling them to maintain a stable and reliable security infrastructure.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Object Configuration Creation and Application: This section of the exam measures the skills of Network Security Analysts and covers the creation, configuration, and application of objects used across security environments. It focuses on building and applying various security profiles, decryption profiles, custom objects, external dynamic lists, and log forwarding profiles. Candidates are expected to understand how data security, IoT security, DoS protection, and SD-WAN profiles integrate into firewall operations. The objective of this domain is to ensure analysts can configure the foundational elements required to protect and optimize network security using Strata Cloud Manager.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Policy Creation and Application:</b> This section of the exam measures the abilities of Firewall Administrators and focuses on creating and applying different types of policies essential to secure and manage traffic. The domain includes security policies incorporating App-ID, User-ID, and Content-ID, as well as NAT, decryption, application override, and policy-based forwarding policies. It also covers SD-WAN routing and SLA policies that influence how traffic flows across distributed environments. The section ensures professionals can design and implement policy structures that support secure, efficient network operations.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Management and Operations:</b> This section of the exam measures the skills of Security Operations Professionals and covers the use of centralized management tools to maintain and monitor firewall environments. It focuses on Strata Cloud Manager, folders, snippets, automations, variables, and logging services. Candidates are also tested on using Command Center, Activity Insights, Policy Optimizer, Log Viewer, and incident-handling tools to analyze security data and improve the organization overall security posture. The goal is to validate competence in managing day-to-day firewall operations and responding to alerts effectively.</li> </ul>

## Valid NetSec-Analyst Mock Exam & NetSec-Analyst Reliable Exam Voucher

Now it is wise choice for you to choose our NetSec-Analyst actual test guide materials. Valid exam questions help you study and prepare double results with half works. You will get high-quality 100% pass rate NetSec-Analyst learning prep so that you can master the key knowledge and clear exam easily. You can Pass NetSec-Analyst Exam in the shortest time and obtain a certification soon. It will benefit you more. Instead of admiring others' redoubtable life, start your new life from choosing valid test dumps. Our NetSec-Analyst actual test guide is the pass king in this field which will be the best option for you.

## Palo Alto Networks Network Security Analyst Sample Questions (Q41-Q46):

### NEW QUESTION # 41

Selecting the option to revert firewall changes will replace what settings?

- A. The running configuration with settings from the candidate configuration
- B. The device state with settings from another configuration
- C. The candidate configuration with settings from the running configuration
- D. Dynamic update scheduler settings

**Answer: A**

### NEW QUESTION # 42

A security operations center (SOC) analyst receives a 'High' severity alert on the Incidents and Alerts page, categorized as 'Brute-Force Attack' targeting an internal web server. Upon investigating the Log Viewer, they find numerous 'authentication' logs with 'auth-fail' results originating from a single external IP address. The analyst wants to immediately block this malicious IP. Which command line interface (CLI) snippet, if executed on the Palo Alto Networks firewall, would achieve this MOST effectively and persistently, assuming the external IP is 203.0.113.5 and a new address object 'MALICIOUS BRUTE FORCER' is desired?

- A. 

```
set system state ip-block 203.0.113.5 permanent
```
- B. 

```
set address MALICIOUS_BRUTE_FORCER ip-netmask 203.0.113.5/32
set policy security BLOCK_BRUTE_FORCE_IP from trust to untrust source MALICIOUS_BRUTE_FORCER destination any application any service any action deny
commit
```
- C. 

```
set device-group shared address MALICIOUS_BRUTE_FORCER ip-netmask 203.0.113.5/32
set rulebase security rules BLOCK_BRUTE_FORCE_IP type universal from any to any source MALICIOUS_BRUTE_FORCER destination any application any service action deny profile-group default
commit
```
- D. 

```
set system state ip-block 203.0.113.5 permanent
```
- E.

```
config
set shared address MALICIOUS_BRUTE_FORCER ip-netmask 203.0.113.5/32
set shared security-rule BLOCK_BRUTE_FORCE_IP from any to any source MALICIOUS_BRUTE_FORCER destination any application any service any action deny
commit
```

**Answer: E**

Explanation:

Option D is the most effective and persistent CLI method. It correctly defines a 'shared' address object, which can be used across multiple device groups if applicable, and then creates a 'shared' security rule. Shared objects and rules are preferred for common policies. While A is syntactically plausible, 'device-group shared' is less common for defining standalone shared objects directly from CLI for immediate action. B is for 'dynamic' IP blocking and has a timeout, making it non-persistent. C misses 'shared' for the address and 'shared' for the rule in the policy path, which is generally not how permanent, centralized security rules are created. E is incorrect syntax for persistent IP blocking on Palo Alto Networks firewalls; dynamic blocking is generally done via 'request ip-block' and permanent blocking through security policies.

#### NEW QUESTION # 43

An organization uses several different web-conferencing tools (Zoom, Microsoft Teams, WebEx). The analyst wants to create a single security rule to allow all these tools without listing each App-ID individually. What should the analyst create?

- A. Application Group
- B. Service Group
- C. Application Filter
- D. Custom App-ID

**Answer: A**

Explanation:

Comprehensive and Detailed 150 to 250 words of Explanation From Palo Alto Networks Network Security Analyst Knowledge: To manage a specific, known set of applications, an Application Group is the most appropriate object. The analyst manually adds the specific App-IDs (Zoom, Teams, etc.) to the group and then uses that group object in the "Application" column of a security rule.

This is distinct from an Application Filter (Option A), which dynamically groups applications based on shared characteristics like "Category: collaboration". While a filter is more automated, an Application Group provides the analyst with explicit control over which "sanctioned" apps are allowed. Using groups simplifies the rulebase, making it easier to read and audit. If the company decides to switch conferencing providers, the analyst only needs to update the single group object, and the change will automatically apply to all security rules referencing that group.

#### NEW QUESTION # 44

Where within the URL Filtering security profile must a user configure the action to prevent credential submissions?

- A. URL Filtering > URL Filtering Settings
- B. URL Filtering > Categories
- C. URL Filtering > Inline Categorization
- D. URL Filtering > HTTP Header Insertion

**Answer: B**

Explanation:

URL filtering technology protects users from web-based threats by providing granular control over user access and interaction with content on the Internet. You can develop a URL filtering policy that limits access to sites based on URL categories, users, and groups. For example, you can block access to sites known to host malware and prevent end users from entering corporate credentials to sites in certain categories.

#### NEW QUESTION # 45

What does an application filter help you to do?

- A. It dynamically provides application statistics based on network, threat, and blocked activity,
- B. It dynamically filters applications based on critical, high, medium, low, or informational severity.

- C. It dynamically groups applications based on application attributes such as category and subcategory.
- D. It dynamically shapes defined application traffic based on active sessions and bandwidth usage.

Answer: C

## NEW QUESTION # 46
