HCIP-Transmission V2.5 Updated Study Material & H31-341_V2.5 Online Test Simulator & HCIP-Transmission V2.5 Valid Exam Answers

If you want to enter a better company, a certificate for this field is quite necessary. H31-341_V2.5 learning materials of us will help you obtain the certificate successfully. H31-341_V2.5 exam braindumps of us are high quality, and they contain both questions and answers, and it will be enough for you to pass the exam. We also pass guarantee and money back guarantee if you fail to pass the exam if you buy H31-341_V2.5 Exam Dumps from us. Just think that you just need to spend some money, you can pass the exam and get the certificate and double your salary. Choose us, you can make it.

Huawei H31-341_V2.5 (HCIP-Transmission V2.5) Certification Exam is an all-encompassing exam for professionals who work with transmission networks. HCIP-Transmission V2.5 certification validates an individual's knowledge and skills in the design, deployment, and troubleshooting of transmission solutions based on Huawei's technologies. H31-341_V2.5 Exam is a comprehensive assessment, taking into account the latest developments in the field to ensure that qualified professionals stay up-to-date.

Huawei HCIP-Transmission V2.5 Sample Questions (Q38-Q43):

NEW QUESTION # 38

() is the core equipment of the access network, and is the access convergence point of various services such as voice, data and

image

Answer:

Explanation:
OLT

NEW QUESTION # 39

Which of the following are the functions of MPLS-TP OAM? (Multiple choice)

- A. Alarm monitoring
- B. Performance Monitoring
- C. Fault location
- D. Fault management

Answer: B,C,D

NEW QUESTION # 40

TDH PTE3 is also called the CES service carried by PWE3, and supports unstructured emulation mode SAToP and structured emulation mode CESoPSN. Which of the following descriptions about the two emulation modes is wrong?

- A. CES. The number of packets that can be encapsulated in the P3 quotation effect is determined by the "message loading time". The teaching cycle of T is 125 microseconds. When the "message loading time" is 1=, it means that each P message will load 8 TD5s.
- B. The control field of the SAToP message is optional.
- C. SAToP does not need to identify the frame structure in the service signal. It treats the TDI service as a Fengxing data stream, divides the TD stream according to the integer multiple of 1 frame length, and then encapsulates it into PWE3 packets for transmission.
- D. In SAToP emulation mode, the overhead and payload in the T0 signal are transparently transmitted, and alarm transparent transmission is supported.

Answer: B

NEW QUESTION # 41

Which of the following is not an advantage of WDM?

- A. Ultra-large capacity and ultra-long haul transmission
- B. Transparent transmission of data
- C. Various overheads
- D. Flexible, economical, and reliable networking

Answer: D

NEW QUESTION # 42

For NG-SDH equipment equipped with dual main control boards, when the main control board is upgraded, which of the following statements is correct?

- A. After upgrading the standby main control board first, the upgrade of the original active main control board can be completed as long as the main control board is switched through
- B. Complete the upgrade of the standby main control board first, then perform a hard reset on the current active main control board to make it active and standby switchover, and then upgrade the current active main control board
- C. First upgrade the active main control board and then upgrade the standby main control board in the same way
- D. Upgrade the active main control board first, and then upgrade the standby main control board

Answer: B
