

Free Fortinet FCP_FWB_AD-7.4 Download Pdf, Test FCP_FWB_AD-7.4 Dumps Free

What's more, part of that Prep4pass FCP_FWB_AD-7.4 dumps now are free: <https://drive.google.com/open?id=1NwxaeEx12zVW2U6z91KhNu3X6L3flWX>

Some candidates may want to get the FCP_FWB_AD-7.4 exam braindumps as soon as possible after they buying it, if you also want to get the FCP_FWB_AD-7.4 exam braindumps quickly, we can do it for you. You pay for the FCP_FWB_AD-7.4 exam dumps, we will send you the downloading link and password to you about five to ten minutes by email. What's more our FCP_FWB_AD-7.4 Exam Braindumps is of high quality, it will help you to pass the exam successfully.

We can provide you with a safety and efficiency shopping experience when you choose Prep4pass FCP_FWB_AD-7.4 test Camp Questions. You see, we use Paypal to do the payment, so the payment process is secured and your personal information is secret and protected. In addition, the payment process is very easy to operate. You will receive an email attached with FCP_FWB_AD-7.4 study pdf after your payment in about 5-10 minutes, then you can start your study immediately.

Free PDF FCP_FWB_AD-7.4 - FCP - FortiWeb 7.4 Administrator Marvelous Free Download Pdf

To give you an idea about the top features of Prep4pass FCP - FortiWeb 7.4 Administrator (FCP_FWB_AD-7.4) exam questions, a free demo of Prep4pass FCP - FortiWeb 7.4 Administrator (FCP_FWB_AD-7.4) exam dumps is being offered free of cost. Just download Prep4pass FCP - FortiWeb 7.4 Administrator (FCP_FWB_AD-7.4) exam questions demo and checks out the top features of Prep4pass FCP - FortiWeb 7.4 Administrator (FCP_FWB_AD-7.4) exam dumps. If you feel that Prep4pass Fortinet FCP_FWB_AD-7.4 exam questions work for you then buy the full and final Prep4pass FCP - FortiWeb 7.4 Administrator (FCP_FWB_AD-7.4) exam dumps at an affordable price and start FCP - FortiWeb 7.4 Administrator (FCP_FWB_AD-7.4) exam preparation.

Fortinet FCP_FWB_AD-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Web Application Security: This domain evaluates the ability of Cybersecurity Specialists to implement advanced threat mitigation strategies using FortiWeb. Candidates must configure the system to block known attacks, ensure comprehensive web application protection, and troubleshoot threat detection or mitigation-related issues. Additionally, they are expected to set up API protection mechanisms to secure web-based interactions from potential threats.

Topic 2	<ul style="list-style-type: none"> • Deployment and Configuration: This section of the exam measures the skills of Network Security Engineers and covers the ability to identify FortiWeb deployment requirements and configure essential system settings. Candidates are expected to set up server pools, security policies, and protected hostnames to ensure seamless deployment. To maintain operational efficiency, they must also configure FortiWeb high availability (HA) for fault tolerance and troubleshoot deployment or system-related issues.
Topic 3	<ul style="list-style-type: none"> • Machine Learning (ML): This section tests the skills of Application Security Engineers in leveraging machine learning to enhance web application security. Candidates will configure machine learning algorithms to detect anomalies, mitigate bot-based threats, and secure APIs through AI-driven analysis. Understanding how to fine-tune these ML-based security measures is crucial for ensuring robust application protection against evolving cyber threats.
Topic 4	<ul style="list-style-type: none"> • Encryption, Authentication, and Compliance: This section of the exam assesses the expertise of Security Analysts in mitigating web application vulnerabilities through encryption and authentication mechanisms. Candidates must configure various access control methods, track user authentication, and prevent attacks targeting authentication systems. They must also implement SSL inspection and offloading techniques to enhance security and troubleshoot encryption or authentication-related issues effectively.

Fortinet FCP - FortiWeb 7.4 Administrator Sample Questions (Q110-Q115):

NEW QUESTION # 110

You are using HTTP content routing on FortiWeb. You want requests for web application A to be forwarded to a cluster of web servers, which all host the same web application. You want requests for web application B to be forwarded to a different, single web server.

Which statement regarding this solution is true?

- A. You must chain policies so that all requests go to the virtual server for policy A first, and then redirect requests for web application B to go to the virtual server for policy B
- B. The server policy always applies the same web protection profile to both web application A and web application B.
- **C. You must put the single web server for application B into a server pool and use it with HTTP content routing.**
- D. You must create static routes on the FortiWeb to allow these requests.

Answer: C

Explanation:

To forward requests for web application B to a single web server, you would configure FortiWeb to use HTTP content routing and create a server pool specifically for web application B. In FortiWeb, server pools are used to group servers together based on application requirements, and you can configure the pool to contain only a single web server for application B.

NEW QUESTION # 111

What benefit does Auto Learning provide?

- **A. Automatically builds rules sets**
- B. Automatically identifies and blocks suspicious IPs
- C. Automatically blocks all detected threats
- D. FortiWeb scans all traffic without taking action and makes recommendations on rules

Answer: A

NEW QUESTION # 112

Refer to the exhibits.

Edit Server Pool

Name: server-pool1

Protocol: HTTP

Type: **Reverse Proxy** (selected), Offline Protection, True Transparent Proxy, Transparent Inspection, WCCP

Single Server/Server Balance: **Single Server**, **Server Balance** (selected)

Server Health Check: availability-check1

Load Balancing Algorithm: Round Robin

Persistence: session-persistence-cookie1

Comments: 0/199 (bytes)

OK Cancel

+ Create New Edit Delete

ID	IP/Domain	Status	Port	HTTP/2	Inherit Health Check	Server Health Check	Backup Server	SSL
1	10.0.1.21	Enable	80	Disable	Yes		Disable	Disable
2	10.0.1.22	Enable	80	Disable	Yes		Disable	Disable

Edit Virtual Server

Name: vserver1

Use Interface IP: ☐

IPv4 Address: 10.0.1.8/255.255.255.0

IPv6 Address: ::0

Interface: port1

FortiWeb is configured in reverse proxy mode and it is deployed downstream to FortiGate. Based on the configuration shown in the exhibits, which of the following statements is true?

- A. FortiGate should forward web traffic to virtual server IP address.
- B. You must disable the Preserve Client IP setting on FortiGate for this configuration to work.
- C. FortiGate should forward web traffic to the server pool IP addresses.
- D. The configuration is incorrect. FortiWeb should always be located upstream to FortiGate.

Answer: A

NEW QUESTION # 113

Which two objects are required to configure a server policy in reverse proxy mode without content routing? (Choose two.)

- A. Protected hostname
- B. Virtual server
- C. Server pool
- D. Site publishing

Answer: A,B

Explanation:

Protected hostname: In reverse proxy mode, the protected hostname refers to the domain or hostname that FortiWeb will protect. It specifies which hostname FortiWeb is acting as a reverse proxy for, and is required for the server policy configuration.

Virtual server: A virtual server is a logical representation of a web server that FortiWeb handles. It's required to configure how traffic is routed to the protected resources in reverse proxy mode.

NEW QUESTION # 114

Which three security features must you configure on FortiWeb to protect API connections? (Choose three.)

- A. Machine learning (ML)-based API protection
- B. API user authentication with SAML
- C. API user key enforcement
- D. API schema validation
- E. Single sign-on (SSO) authentication with Active Directory (AD)

Answer: A,C,D

Explanation:

Machine learning (ML)-based API protection: ML-based API protection helps detect and mitigate abnormal behavior in API traffic, such as bot attacks or abuse, by learning and adapting to normal traffic patterns.

API schema validation: API schema validation ensures that the API requests conform to the defined schema (e.g., checking the structure, fields, and types in the API calls). This helps prevent attacks like XML or JSON injection by ensuring only valid requests are processed.

API user key enforcement: Enforcing API user key authentication requires clients to provide valid API keys, ensuring only authorized users can access the API. This is crucial for controlling access to the API.

NEW QUESTION # 115

.....

Exam candidates hold great purchasing desire for our FCP_FWB_AD-7.4 study questions which contribute to successful experience of former exam candidates with high quality and high efficiency. So our FCP_FWB_AD-7.4 practice materials have great brand awareness in the market. They can offer systematic review of necessary knowledge and frequent-tested points of the FCP_FWB_AD-7.4 Learning Materials. You can familiarize yourself with our FCP_FWB_AD-7.4 practice materials and their contents in a short time.
