The price of Our 1z0-1080-25 practice guide is affordable, and you can always find that from time to time, we will give some promotion for our worthy customers. Meanwhile, we provide the wonderful service before and after the sale to let you have a good understanding of our 1z0-1080-25 Study Materials. Our service are working at 24/7 online to give you the best and the most professional guidance on our 1z0-1080-25 learning braindumps.

Oracle 1z0-1080-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Set up and run data maps: This section of the exam measures the skills of a Planning Administrator and focuses on configuring and executing data maps to move data across plan types or applications.
Topic 2	<ul style="list-style-type: none">• Manage Rules: This section of the exam measures the skills of an EPM Consultant and covers designing and managing business logic using rules and rulesets to automate calculations.
Topic 3	<ul style="list-style-type: none">• Describe Planning features: This section of the exam measures the skills of an EPM Consultant and focuses on recognizing key Planning features that help organizations manage and analyze financial data efficiently.

Topic 4	<ul style="list-style-type: none"> Assign access permissions to artifacts and cells in Planning: This section of the exam measures the skills of a Planning Administrator and involves granting permissions to users for accessing specific Planning objects and data.
Topic 5	<ul style="list-style-type: none"> Identify metadata and data load options: This section of the exam measures the skills of a Planning Administrator and introduces options available for importing and managing metadata and data within the system
Topic 6	<ul style="list-style-type: none"> Planning Overview: This section of the exam measures the skills of an EPM Consultant and covers the general features of Planning. It includes how Planning works, its core capabilities, and how it fits into enterprise performance management.
Topic 7	<ul style="list-style-type: none"> Map data across applications: This section of the exam measures the skills of an EPM Consultant and includes how to map and align data structures between Planning and other connected applications.
Topic 8	<ul style="list-style-type: none"> Explain the benefits of using Groovy Rules: This section of the exam measures the skills of an EPM Consultant and explains how Groovy scripting enhances rule flexibility and performance.
Topic 9	<ul style="list-style-type: none"> Manage Metadata and Data: This section of the exam measures the skills of a Planning Administrator and covers methods for loading and maintaining metadata and data in Planning.
Topic 10	<ul style="list-style-type: none"> Import and export data into Planning: This section of the exam measures the skills of a Planning Administrator and covers the process of moving planning data into and out of the system.
Topic 11	<ul style="list-style-type: none"> Creating System Reports: This section of the exam measures the skills of a Planning Administrator and focuses on system-generated reports that provide insights into application activity.
Topic 12	<ul style="list-style-type: none"> Design business rules and rulesets: This section of the exam measures the skills of an EPM Consultant and focuses on creating logic structures to perform calculations and automate processes in Planning.
Topic 13	<ul style="list-style-type: none"> Create and run data integrations: This section of the exam measures the skills of an EPM Consultant and involves building data integration flows between different data sources and Planning.
Topic 14	<ul style="list-style-type: none"> Import and export metadata into Planning: This section of the exam measures the skills of a Planning Administrator and involves understanding how to bring metadata in and out of Planning applications.
Topic 15	<ul style="list-style-type: none"> This section of the exam measures the skills of a Planning Administrator and includes understanding how standard and custom dimensions are used, and how dimension hierarchies affect planning structure and outcomes.
Topic 16	<ul style="list-style-type: none"> Report on EPM data: This section of the exam measures the skills of a Planning Administrator and covers using reporting tools to analyze data stored in EPM applications.
Topic 17	<ul style="list-style-type: none"> Report on Planning Data: This section of the exam measures the skills of a Planning Administrator and focuses on generating reports to analyze and present Planning data effectively.
Topic 18	<ul style="list-style-type: none"> Provision users and groups. This section of the exam measures the skills of a Planning Administrator and covers how to manage user access by assigning them to appropriate roles and groups.
Topic 19	<ul style="list-style-type: none"> Create and manage navigation flows: This section of the exam measures the skills of an EPM Consultant and involves organizing navigation flows to simplify user interaction in Planning.
Topic 20	<ul style="list-style-type: none"> Manage Forms, Dashboards, and Navigation Flows: This section of the exam measures the skills of an EPM Consultant and includes creating interactive forms and dashboards and setting up navigation flows for a better user experience.
Topic 21	<ul style="list-style-type: none"> Set up Planning and FreeForm Applications: This section of the exam measures the skills of a Planning Administrator and involves setting up Planning applications, including FreeForm apps, to support flexible planning and modeling needs.

Topic 22	<ul style="list-style-type: none"> • Explain required and user-defined dimensions; how dimension hierarchies impact Planning
Topic 23	<ul style="list-style-type: none"> • Build validation rules: This section of the exam measures the skills of an EPM Consultant and includes creating rules that validate data entry in forms.
Topic 24	<ul style="list-style-type: none"> • Manage Dimensions: This section of the exam measures the skills of a Planning Administrator and covers how to manage essential dimensions and hierarchies that organize planning data.
Topic 25	<ul style="list-style-type: none"> • Create Reports: This section of the exam measures the skills of a Planning Administrator and involves creating reports that summarize planning activities and outcomes.
Topic 26	<ul style="list-style-type: none"> • Introduction to Planning Modules: This section of the exam measures the skills of an EPM Consultant and introduces the available Planning modules, their integration, and use cases.
Topic 27	<ul style="list-style-type: none"> • Set up valid and invalid intersections and cell-level security: This section of the exam measures the skills of an EPM Consultant and focuses on defining valid data intersections and applying security controls to limit data access at the cell level.
Topic 28	<ul style="list-style-type: none"> • Set Up Planning Security: This section of the exam measures the skills of a Planning Administrator and includes provisioning user roles and assigning appropriate access rights across Planning artifacts and data.
Topic 29	<ul style="list-style-type: none"> • Describe Planning modules: This section of the exam measures the skills of an EPM Consultant and includes identifying different modules like Financials, Workforce, Projects, and Capital.

2026 Reliable 1z0-1080-25 Dumps Free | Latest Training 1z0-1080-25 Pdf: Oracle Planning 2025 Implementation Professional 100% Pass

The warm feedbacks from our customers all over the world and the pass rate high to 99% on 1z0-1080-25 actual exam proved and tested our influence and charisma on this career. You will find that our they are the best choice to your time and money. Our 1z0-1080-25 Study Dumps have been prepared with a mind to equip the exam candidates to answer all types of 1z0-1080-25 real exam Q&A. For the purpose, 1z0-1080-25 test prep is compiled to keep relevant and the most significant information that you need.

Oracle Planning 2025 Implementation Professional Sample Questions (Q22-Q27):

NEW QUESTION # 22

Given these two use cases:

Create a starting point for subsequent versions and replicate your First Pass version to a Second Pass version and make changes to it.

Save your baseline version data for your records and future analysis.

Which Planning Service Administrator-only feature or component can you use to perform tasks for these use cases?

- A. Task manager
- B. Version mapping
- C. Version management
- D. Copy versions

Answer: D

NEW QUESTION # 23

Which statement describes infolets?

- A. Infolets are predefined dashboards that give you insight into the overall project financials and expense and revenue metrics.

- B. Infolets help you organize, track, and prioritize your workload.
- C. Infolets give business process designers control over how various roles or groups interact with a business process.
- **D. Infolets help you quickly analyze data and understand key business questions by presenting a visual overview of high-level, aggregated information.**
- E. Infolets are a form type that provides flexible row management where dimension and member row cells and all data cells are unprotected.

Answer: D

Explanation:

In Oracle Planning 2024 Implementation, infolets are a feature designed to provide users with quick, visual insights into critical business data. They are not full dashboards, task management tools, or process control mechanisms, but rather compact, high-level representations of aggregated information.

* C. Infolets help you quickly analyze data and understand key business questions by presenting a visual overview of high-level, aggregated information: This statement accurately describes infolets.

They are visual tiles or widgets that display summarized data (e.g., KPIs, trends) to help users grasp key business insights at a glance. Infolets are typically found on the home page or navigation clusters and are customizable to highlight specific metrics relevant to the user's role or application.

* A. Infolets are predefined dashboards that give you insight into the overall project financials and expense and revenue metrics: While infolets provide insights, they are not full "predefined dashboards." Dashboards are more comprehensive, whereas infolets offer concise, targeted views of data.

* B. Infolets help you organize, track, and prioritize your workload: This describes task management or navigation features (e.g., task lists), not infolets, which focus on data visualization rather than workload management.

* D. Infolets give business process designers control over how various roles or groups interact with a business process: Infolets are not about process design or role interaction; they are about displaying data, not controlling processes.

* E. Infolets are a form type that provides flexible row management where dimension and member row cells and all data cells are unprotected: Infolets are not a form type; they are separate from forms and focus on visualization, not data entry or row management.

References

* Oracle Enterprise Performance Management Cloud Documentation: "Using Infolets" (docs.oracle.com, updated 2024). Describes infolets as "visual overviews of high-level, aggregated information to quickly analyze data and answer business questions."

* Oracle Planning 2024 Implementation Study Guide: Defines infolets as tools for presenting summarized data visually for quick analysis.

NEW QUESTION # 24

You want to design a report with Reports for Oracle Enterprise Performance Management Cloud. You have an error on the report indicated by a red bar above the report header.

Which two statements describe possible causes of report object errors in Report Designer?

- A. The report name is blank when you use a text function to display the name.
- **B. The report object overlaps with another report object.**
- C. The size of the inserted graphic is too large.
- **D. The data source connection for the report is no longer valid.**

Answer: B,D

Explanation:

When designing a report in Reports for Oracle Enterprise Performance Management Cloud and encountering an error (indicated by a red bar above the report header), the issue often stems from report object configuration. The two possible causes are:

* A. The report name is blank when you use a text function to display the name: Incorrect. A blank report name might cause display issues, but it's not a common cause of a report object error flagged by a red bar-errors typically relate to objects or data sources, not naming.

* B. The report object overlaps with another report object: Correct. Overlapping objects (e.g., grids, charts) can cause rendering or validation errors in Report Designer, triggering an error indicator like a red bar due to layout conflicts.

* C. The data source connection for the report is no longer valid: Correct. If the data source (e.g., a cube or grid definition) becomes invalid (e.g., deleted, renamed, or inaccessible), the report cannot retrieve data, resulting in an error marked by a red bar.

* D. The size of the inserted graphic is too large: Incorrect. While large graphics might affect performance or formatting, they do not typically cause a report object error flagged by a red bar-size issues are more likely to impact display than functionality.

The Oracle documentation identifies B (object overlap) and C (invalid data source) as frequent causes of errors in Report Designer, making them the correct answers.

NEW QUESTION # 25

You need to schedule a weekly data import job. Which two statements are true about scheduling jobs?

- **A. You can set to receive notifications when the job has completed.**
- B. You can check the execution status of a job only if it completed.
- C. You can delete that are currently processing.
- D. You can set the daily maintenance time when scheduling cloning environment jobs.
- **E. You can schedule an Import Data job to run later at intervals.**

Answer: A,E

Explanation:

In Oracle Planning 2024, scheduling jobs such as a weekly data import is managed through the Jobs interface, which provides options for automation, monitoring, and notifications. Let's evaluate the provided statements to identify the two that are true:

* A. You can check the execution status of a job only if it completed: This is false. The Jobs console in Oracle EPM allows users to check the status of a job (e.g., Running, Completed, Failed) at any time, not just after completion. Real-time monitoring is a key feature.

* B. You can set the daily maintenance time when scheduling cloning environment jobs: This is false.

Daily maintenance time is a system-wide setting controlled by administrators via Application Settings, not something adjustable when scheduling specific jobs like cloning or data imports.

* C. You can set to receive notifications when the job has completed: This is true. When scheduling a job (e.g., Import Data), users can enable email notifications to be alerted upon job completion, success, or failure, enhancing job management.

* D. You can schedule an Import Data job to run later at intervals: This is true. The scheduling feature supports recurring jobs, such as weekly data imports, allowing users to define the start time and frequency (e.g., daily, weekly) for tasks like importing data from external sources.

* E. You can delete that are currently processing: This is false. Jobs that are currently processing (i.e., in a "Running" state) cannot be deleted until they complete or fail, as per Oracle's job management rules.

Thus, the two true statements are C and D, reflecting the flexibility of scheduling recurring Import Data jobs and receiving completion notifications, both of which are explicitly supported in Oracle Planning 2024.

NEW QUESTION # 26

Which two statements describe tasks that need to be completed so that planners can use a Machine Learning (ML) model in Planning?

- **A. Administrators create an action menu to run the Groovy rule generated from the ML model definition, and then assign the action menu to a form.**
- B. Administrators build a navigation flow to set up the ML model definition, and then set up a data map to map historical data to future data and push the actual data to the cube.
- C. Administrators build a task list to set up the ML model definition, and then run the Groovy rule to generate future data.
- **D. Administrators import the ML model into a Planning application and define how the input variables and the target variable map to dimension members or cell values in the Planning application.**

Answer: A,D
