Get Pass-Sure Valid UiPath-ABAAv1 Practice Materials and Pass Exam in First Attempt

The UiPath UiPath-ABAAv1 certification exam offers a great opportunity to advance your career. With the UiPath Automation Business Analyst Associate Exam (2023.10) certification exam beginners and experienced professionals can demonstrate their expertise and knowledge. After passing the UiPath Automation Business Analyst Associate Exam (2023.10) (UiPath-ABAAv1) exam you can stand out in a crowded job market. The UiPath-ABAAv1 certification exam shows that you have taken the time and effort to learn the necessary skills and have met the standards in the market.

UiPath Automation Business Analyst Associate Exam (2023.10) Sample Questions (Q10-Q15):

NEW QUESTION # 10

Which role is responsible for fixing any defects found during UAT?

- A. Infrastructure Engineer
- B. Solution Architect
- C. Business Analyst
- D. Automation Developer**

Answer: D

Explanation:

During the User Acceptance Testing (UAT) stage, any defects or issues identified are addressed by the Automation Developer. This role is responsible for building the automation based on the agreed design and then making any required corrections based on UAT feedback.

The automation developer collaborates closely with the business analyst, solution architect, and project manager to ensure that the solution functions correctly in a production-like environment. If testers from the Client Team identify bugs or unexpected behavior, the developer investigates and applies fixes promptly.

Furthermore, the developer must also document changes, update stakeholders, and sometimes revise the test cases or SDD if significant adjustments are made. Their ability to respond quickly and effectively to UAT issues directly influences user confidence and the success of the production rollout.

NEW QUESTION # 11

Which stage of the automation implementation should access requirements be clearly defined and communicated?

- A. Solution Design, Business Case and Technical Validation, Kickoff
- B. Project Closure and UAT
- C. Only in the Deployment stage
- D. Only in the Process Analysis stage

Answer: A

Explanation:

Access requirements should be clearly defined and communicated during the Kickoff, Business Case and Technical Validation, and Solution Design stages of the automation implementation. Each of these stages plays a unique role in ensuring that the correct technical access is available to avoid delays and roadblocks in development and testing.

* In the Kickoff stage, the Implementation and Client Teams initiate discussions around what environments and applications will be used and the potential access needed.

* During the Business Case and Technical Validation stage, the solution architect identifies the specific access requirements for applications, systems, and tools that the automation will interact with, as well as access to Studio and Orchestrator for developers and robots.

* In the Solution Design stage, access requirements are revisited in detail to finalize the technical design and ensure that developers and infrastructure teams have what they need to begin work.

Failure to define access early can lead to project delays, extended UAT timelines, or failed deployments.

Therefore, proactive communication and planning around access are essential components of successful automation delivery.

NEW QUESTION # 12

What is the primary purpose of the Process Assessment Tool in UiPath?

- A. Managing robot workloads
- B. Designing automated workflows
- C. Determining process fit and feasibility for automation
- D. Tracking project defects

Answer: C

Explanation:

The Process Assessment Tool in UiPath is designed to evaluate whether a business process is a good fit for automation. It assists business analysts and other stakeholders in determining both the feasibility and the value of automating a specific process.

The tool assesses various dimensions such as process complexity, frequency, standardization, exception handling, and potential business impact. Based on this evaluation, the tool generates a score or categorization that helps prioritize processes for automation. This helps organizations invest their automation efforts in the right areas - those that offer high ROI and are technically viable. It also enables strategic decision-making in the Discover phase, where automation candidates are initially shortlisted and analyzed.

NEW QUESTION # 13

Which of the following best describes a human-in-the-loop automation model?

- A. Robots only work when manually triggered

- B. Users control the robot's every action in real time
- C. Robots run independently without user input
- D. Unattended robots request user input at certain steps

Answer: D

Explanation:

In a human-in-the-loop automation model, unattended robots perform processes automatically but pause and request user input when required. This model allows robots to handle repetitive and rule-based tasks while humans intervene in scenarios that require decision-making or approval.

UiPath supports human-in-the-loop functionality using tools such as UiPath Action Center, where users can review exceptions, provide additional data, or make business decisions. Once the input is received, the automation resumes and completes the rest of the process autonomously.

This model is particularly useful for processes involving compliance checks, approvals, or document verification - blending the speed of automation with human judgment where necessary.

NEW QUESTION # 14

Which of the following roles is responsible for becoming well-versed in the business process to be automated?

- A. Infrastructure Engineer
- B. Automation Developer
- C. Automation Business Analyst
- D. Solution Architect

Answer: C

Explanation:

The Automation Business Analyst is responsible for becoming well-versed in the business process that is to be automated. Their role is to deeply understand the process from the business perspective and ensure that the automation solution aligns with business goals and stakeholder expectations.

They achieve this by conducting workshops, shadowing sessions, and interviews with Subject Matter Experts (SMEs) from the Client Team. They then document the As-Is process and help define the To-Be state, collaborating closely with the Solution Architect to ensure feasibility and completeness.

The Business Analyst is also instrumental in identifying automation candidates, validating business value, and defining success criteria and UAT scenarios. Their business-focused insights are essential in building automations that deliver real value and meet the organization's objectives.

NEW QUESTION # 15

.....

Though studies have shown that most people over a period of time only to the memory of seven information plates, in the qualification exam review, a lot of exam content is miscellaneous and, therefore, get the test. UiPath-ABAAv1 certification requires the user to have extremely high concentration will all test sites in mind, and this is definitely a very difficult. Our UiPath-ABAAv1 learning questions can successfully solve this question for you for the content are exactly close to the changes of the real UiPath-ABAAv1 exam.
