NEW QUESTION # 44
Refer to the exhibits.

An administrator Is expecting to receive advertised route 8.8.8.8/32 from FGT-A. On FGT-B, they confirm that the route is being advertised and received, however, the route is not being injected into the routing table.
What is the most likely cause of this issue?

- A. A batter route to the 8.8.8.8/32 network exists in the routing table.
- B. FGT-B is configured with a prefix list denying the 8.8.8.8/32 network to be injected into the routing table.
- C. FGT-8 is configured with a distribution list denying the 8.8.8.8/32 network to be injected into the routing table.
- D. The administrator has misconfigured redistribution of routes on FGT-A.

Answer: B

Explanation:
The 8.8.8.8/32 route is visible in the OSPF database on FGT-B but not installed into the routing table-the most likely explanation is that FGT-B is filtering it from being installed.
