1/5

Whether you are good at learning or not, passing the exam can be a very simple and enjoyable matter together with our HPE7-S02 practice engine. As a professional multinational company, we fully take into account the needs of each user when developing our HPE7-S02 Exam Braindumps. For example, in order to make every customer can purchase at ease, our HPE7-S02 preparation quiz will provide users with three different versions for free trial, corresponding to the three official versions.

HP HPE7-S02 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Solution Optimization and Security	5%	- Security best practices - Efficiency and resilience
Topic 2: Troubleshooting HPE Private Cloud AI	10%	- Performance tuning and optimization - Issue diagnosis and resolution
Topic 3: Integration with Third-Party Platforms	15%	- VMware integration - Red Hat OpenShift and Kubernetes integration
Topic 4: AI Workshops and HPE AI Essentials Platform	15%	- Customer engagement and assessment - Platform capabilities and deployment
Topic 5: High Performance Computing (HPC) Design and Management	10%	- Architecture and scaling - Management and monitoring

Topic 6: HPE AI Essentials: Data Analytics and Data Science	15%	- Data pipelines and processing - Analytics and machine learning tools
Topic 7: HPE ProLiant Gen12 for AI	20%	- GPU integration and configuration - Server architecture and components - AI-optimized compute design
Topic 8: NVIDIA AI Enterprise and Model Serving	10%	- Software deployment and management - Model serving architecture and optimization

HPE7-S02 Hot Spot Questions | Exam HPE7-S02 Details

NewPassLeader has come up with the latest and real HP HPE7-S02 Exam Dumps that can solve these drastic problems for you. We guarantee that these questions will be enough for you to clear the Advanced HPE Compute Integrator Solutions Written Exam (HPE7-S02) examination on the first attempt. Doubtlessly, cracking the HPE7-S02 test of the HPE7-S02 credential is one tough task but this task can be made easier if you prepare with HPE7-S02 practice questions of NewPassLeader. Keeping in view different preparation styles of Advanced HPE Compute Integrator Solutions Written Exam (HPE7-S02) test applicant NewPassLeader has designed three easy-to-use formats for its product.

HP Advanced HPE Compute Integrator Solutions Written Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

An organization running a mixed fleet of HPE ProLiant, Synergy, and Alletra storage systems wants predictive analytics and AI-driven recommendations to prevent infrastructure issues before they occur. Which HPE offering should be proposed?

- A. HPE InfoSight
- B. HPE Insight Remote Support
- C. HPE OneView Global Dashboard
- D. HPE iLO Amplifier Pack

Answer: A

Explanation:

HPE InfoSight provides AI-driven predictive analytics across compute and storage (extended from Nimble/Alletra into ProLiant and other infrastructure) to identify and often auto-resolve problems before they impact operations. OneView Global Dashboard aggregates OneView instances, Insight Remote Support automates support-case creation, and iLO Amplifier Pack is a firmware/health scanning tool for large ProLiant fleets.

NEW QUESTION # 21

An HPE Private Cloud AI customer wants to import a custom framework. The customer wants to ensure that only authorized users access that framework's endpoint URL. You have created an authorization policy for this purpose. In which namespace should you add the policy?

- A. the namespace in which you will import the framework
- B. the namespace associated with your user account
- C. ezapp-system
- D. istio-system

Answer: D

Explanation:

The AuthorizationPolicy for securing the imported framework endpoint is applied to the Istio ingress gateway, so it belongs in the istio-system namespace, not the framework's own namespace or the user namespace. HPE examples set authorizationPolicy.namespace to istio-system.

NEW QUESTION # 22

What is one innovation in NVIDIA Blackwell GPUs?

- A. High-speed GPU-to-GPU connections over PCIe lanes
- B. An expanded L4 memory cache
- C. Support for mixed 4th Generation Tensor Cores and 4th Generation RT Cores
- **D. A second-generation Transformer Engine with support for more precisions**

Answer: D

Explanation:

A is correct, with the terminology corrected to "second-generation Transformer Engine." NVIDIA Blackwell introduces a second-generation Transformer Engine that expands support for lower-precision numerical formats used in AI workloads. By dynamically selecting suitable precision while preserving model quality, the architecture can increase throughput and reduce memory and compute requirements for training and inference. Blackwell also introduces newer Tensor Core capabilities specifically designed for generative-AI workloads.

The other choices do not accurately describe Blackwell. The architecture is not characterized by an "L4 memory cache." High-speed GPU-to-GPU communication in HGX-class systems relies on NVIDIA NVLink

/NVSwitch technology rather than simply routing peer traffic over ordinary PCIe lanes. Blackwell uses fifth-generation Tensor Cores; therefore an answer referring to a mixture of fourth-generation Tensor and RT cores is not correct.

For the HPE7-S02 objective, the important point is workload fit. HPE AI-optimized systems use current accelerator architectures because LLM training and inference depend heavily on tensor throughput, efficient low-precision arithmetic, high memory bandwidth, and fast GPU interconnects.

References/topics: Advanced HPE Compute Solutions, Rev. 26.21, Module 1 "HPE ProLiant Gen12 for AI"; HPE and NVIDIA Blackwell platform materials; NVIDIA Blackwell architecture documentation.

NEW QUESTION # 23

An HPE Private Cloud AI customer wants to import a custom framework. The customer wants to ensure that only authorized users access that framework's endpoint URL. You have created an authorization policy for this purpose.

In which namespace should you add the policy?

- A. the namespace in which you will import the framework
- B. the namespace associated with your user account
- C. ezapp-system
- **D. istio-system**

Answer: D

Explanation:

A is correct. For an imported framework exposed through HPE AI Essentials, the authorization policy that controls access to the framework endpoint is placed in the istio-system namespace. The reason is architectural: access to the application is enforced at the Istio service-mesh and ingress layer, so the AuthorizationPolicy must be associated with the namespace where the relevant Istio gateway and policy enforcement context operate. The policy then limits which authenticated identities can reach the imported framework.

A user namespace is where many user-scoped workloads and resources run, but it is not the correct location for the ingress authorization policy in this workflow. The ezapp-system namespace contains platform application components and is not the documented target for this policy. Likewise, placing the policy only in the framework's application namespace would not implement the HPE AI Essentials ingress authorization pattern described for imported frameworks.

Current Rev. 26.21 training also introduces AutoHelm and updated framework-import behavior, but it continues to treat access control as an Istio authorization-policy function rather than a GreenLake user-setting shortcut.

References/topics: Advanced HPE Compute Solutions, Rev. 26.21, Module 3 "Understanding and managing communications" and governance policies; HPE AI Essentials Software documentation, SSO/authorization for imported frameworks.

NEW QUESTION # 24

An HPE Private Cloud AI customer wants to eliminate the certificate errors that show when users access HPE AI Essentials. The customer has created a certificate signed by their CA to replace the current certificate. The customer has given you the certificate file, private key file, and CA certificate file.

How should you install this certificate?

- A. Create a CertificateIssuer that references the CA certificate in the HPE AI Essential cert-manager namespace. Then create an ingress-cert certificate based on the provided certificate and private key in the istio-system namespace.
- B. Log into the Keycloak interface using the credentials stored in the HPE AI Essentials ezaddon-system namespace. Upload the certificate, private key, and CA certificate files in the "ua" realm.
- C. Use the HPE Private Cloud AI interface to access the VM that hosts the HPE AI Essentials UI. Install the certificate, private key, and CA certificate on that VM.
- D. Delete the current "ingress-cert" certificate and secret in the HPE AI Essentials istio-system namespace. Add a new "ingress-cert" secret in this namespace referencing the provided files.

Answer: D

Explanation:

D is correct for a customer-supplied, already-issued certificate. HPE AI Essentials presents its external TLS identity through the Istio ingress gateway, and the relevant certificate material is held in the ingress-cert secret in the istio-system namespace. When performing the manual replacement workflow, the administrator replaces the existing ingress certificate secret with one populated from the supplied certificate, private key, and CA chain according to HPE's documented format.

Option A is incorrect because the certificate is not installed on a single UI virtual machine; HPE AI Essentials is a Kubernetes-based platform and ingress TLS is handled at the cluster ingress layer. Option B confuses certificate issuance with certificate installation. A ClusterIssuer is appropriate when cert-manager should request and renew a certificate, but the customer has already supplied the signed certificate and key. Option C incorrectly places TLS management in Keycloak.

Rev. 26.21 updated the certificate procedures for HPE AI Essentials 1.9 and later, so administrators should follow the version-specific HPE commands and secret format rather than an older generic Kubernetes recipe.

References/topics: Advanced HPE Compute Solutions, Rev. 26.21, Module 3 "Replacing the Istio ingress gateway certificate"; HPE AI Essentials documentation, manual certificate replacement and ingress-cert access.

NEW QUESTION # 25

.....

We provide free update to the client and the discounts to the old client. We provide free update of our HPE7-S02 exam materials within one year and after one year the client can enjoy the 50% discounts. The old clients enjoy some certain discounts when they buy our HPE7-S02 exam torrent. Our experts check whether there is the update of the test bank every day and if there is the system will send to the client automatically. We choose the most typical questions and answers which seize the focus and important information and the questions and answers are based on the real exam. So you can master the most important HPE7-S02 Exam Torrent in the shortest time and finally pass the exam successfully.
