DumpStillValid is one of the leading platforms that has been helping Trend Micro Certified Professional for Deep Security (Deep-Security-Professional) exam candidates for many years. Over this long time period we have helped Trend Micro Certified Professional for Deep Security (Deep-Security-Professional) exam candidates in their preparation. They got help from DumpStillValid Trend Deep-Security-Professional Practice Questions and easily got success in the final Trend Deep-Security-Professional certification exam. You can also trust Trend Deep-Security-Professional exam dumps and start preparation with complete peace of mind and satisfaction.

The Trend Deep-Security-Professional exam covers a range of topics related to securing cloud environments, including the fundamentals of cloud security, the architecture and deployment of Deep Security, and advanced security techniques such as intrusion prevention, vulnerability scanning, and application control. Through this certification program, professionals will learn how to implement best practices for securing their cloud environments, as well as how to troubleshoot and optimize their security configurations.

Trend Deep-Security-Professional certification is ideal for professionals who want to demonstrate their expertise in implementing, configuring, and managing Trend Micro's Deep Security product. Trend Micro Certified Professional for Deep Security certification is also suitable for IT professionals who want to enhance their skills in the field of cybersecurity and stay up-to-date with the latest trends and technologies. With the increasing demand for cybersecurity professionals, earning the Trend Deep-Security-Professional Certification can open up new career opportunities and increase earning potential for individuals.

Effectiveness of Trend Deep-Security-Professional Actual Questions for Certification Success

With our professional experts' unremitting efforts on the reform of our Deep-Security-Professional guide materials, we can make sure that you can be focused and well-targeted in the shortest time when you are preparing a test, simplify complex and ambiguous contents. With the assistance of our Deep-Security-Professional Study Guide you will be more distinctive than your fellow workers. For all the above services of our Deep-Security-Professional practice engine can enable your study more time-saving and energy-saving.

Trend Deep-Security-Professional Exam, also known as the Trend Micro Certified Professional for Deep Security, is a certification program designed to validate the skills and knowledge of professionals in the field of cybersecurity. Deep-Security-Professional exam is intended for individuals who want to demonstrate their expertise in implementing, configuring, and managing the Trend Micro Deep Security solution. It is also ideal for those who want to enhance their careers in the cybersecurity industry.

Trend Micro Certified Professional for Deep Security Sample Questions (Q61-Q66):

NEW QUESTION # 61

The Intrusion Prevention Protection Module is enabled, its Behavior is set to Prevent and rules are assigned.

When viewing the events, you notice that one of Intrusion Prevention rules is being triggered and an event is being logged but the traffic is not being blocked. What is a possible reason for this?

- A. The Deep Security Agent is experiencing a system problem and is not processing packets since the "Network Engine System Failure" mode is set to 'Fail Open'.
- B. The Intrusion Prevention rule is being triggered as a result of the packet sanity check failing and the packet is being allowed to pass.
- C. The default Prevention Behavior in this particular rule may be set to Detect. This logs the triggering of the rule, but does not actually enforce the block.
- D. The network engine is running in Inline mode. In Inline mode, Deep Security provides no protection beyond a record of events.

Answer: C

Explanation:

If the Intrusion Prevention rule's behavior is set to Detect rather than Prevent, it will log events when the rule is triggered but will not block the associated traffic. This can happen even if the module's overall setting is Prevent, because individual rules can have their own behavior configuration.

NEW QUESTION # 62

Your organization would like to implement a mechanism to alert administrators when files on a protected servers are modified or tampered with. Which Deep Security Protection Module should you enable to provide this functionality?

- A. The Integrity Monitoring Protection Module
- B. The Intrusion Prevention Protection Module
- C. The File Inspection Protection Module
- D. Deep Security can not provide this type of functionality

Answer: A

NEW QUESTION # 63

Which of the following statements is true regarding the Log Inspection Protection Module?

- A. Log Inspection can only examine Deep Security log information.

- B. Deep Security Agents forward Log Inspection Event details to Deep Security Manager in real time.
- C. The Log Inspection Protection Module is supported in both Agent-based and Agentless implementations.
- D. Log Inspection can only examine new Events and cannot examine logs entries created before the Protection Module was enabled.

Answer: D

NEW QUESTION # 64

Which of the following Protection Modules does not benefit from Recommendation Scans?

- A. Integrity Monitoring
- B. Firewall
- C. Intrusion Prevention
- D. Log Inspection

Answer: D

Explanation:

Recommendation Scans analyze system roles and applications to suggest appropriate Firewall, Intrusion Prevention, and Integrity Monitoring rules, but do not provide recommendations for Log Inspection. Log Inspection rules must be assigned manually.

NEW QUESTION # 65

Multiple Application Control Events are being displayed in Deep Security after a series of application updates and the administrator would like to reset Application Control. How can this be done?

- A. Application Control can not be reset.
- B. On the Deep Security Agent computer, type the following command to reset Application Control: dsa_control -r
- C. Click "Clear All" on the Actions tab in the Deep Security Manager Web console to reset the list of Application Control events.
- D. Application Control can be reset by disabling the Protection Module, then enabling it once again. This will cause local rulesets to be rebuilt.

Answer: D

NEW QUESTION # 66
