## Relevant Palo Alto Networks PCNSE Exam Dumps | Valid PCNSE Test Questions

In traditional views, the PCNSE practice materials need you to spare a large amount of time on them to accumulate the useful knowledge may appearing in the real PCNSE exam. However, our PCNSE learning questions are not doing that way. According to data from former exam candidates, the passing rate of our PCNSE learning material has up to 98 to 100 percent. There are

adequate content to help you pass the exam with least time and money.

## Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q57-Q62):

### NEW QUESTION # 57

Refer to the exhibit. A web server in the DMZ is being mapped to a public address through DNAT.

Which Security policy rule will allow traffic to flow to the web server?

- A. Untrust (any) to Untrust (10.1.1.100), web browsing -Allow
- B. Untrust (any) to DMZ (10.1.1.100), web browsing -Allow
- C. Untrust (any) to Untrust (1.1.1.100), web browsing -Allow
- D. Untrust (any) to DMZ (1.1.1.100), web browsing -Allow

**Answer: D**

Explanation:

NAME	TAGS	Original Packet						Translated Packet	
		SOURCE ZONE	DESTINATION ZONE	DESTINATION INTERFACE	SOURCE ADDRESS	DESTINATION ADDRESS	SERVICE	SOURCE TRANSLATION	DESTINATION TRANSLATION
Dst NAT-webserver	none	Untrust-L3	Untrust-L3	any	any	Webserver-public	any	none	destination-translation address: webserver-private

The direction of the NAT rules is based on the result of route lookup.

The configured security policy to provide access to the server from the Untrust-L3 zone would look like this:

NAME	Source		Destination		APPLICATION	SERVICE	ACTION	PROFILE	OPTIONS
	ZONE	ADDRESS	ZONE	ADDRESS					
Webserver access	Untrust-L3	any	DMZ	Webserver-pu...	web-browsing	any	Allow	none

### NEW QUESTION # 58

An administrator creates a custom application containing Layer 7 signatures. The latest application and threat dynamic update is downloaded to the same firewall. The update contains an application that matches the same traffic signatures as the custom application.

Which application will be used to identify traffic traversing the firewall?

- A. Custom application
- B. Incomplete application

- C. Downloaded application
- D. Unknown application

**Answer: A**

Explanation:

#### NEW QUESTION # 59

Panorama provides which two SD-WAN functions? (Choose two.)

- A. control plane
- B. network monitoring
- C. physical network links
- D. data plane

**Answer: A,D**

Explanation:

Explanation/Reference:

#### NEW QUESTION # 60

Which three external authentication services can the firewall use to authenticate admins into the Palo Alto Networks NGFW without creating administrator account on the firewall? (Choose three.)

- A. Kerberos
- B. RADIUS
- C. LDAP
- D. TACACS+
- E. SAML

**Answer: B,D,E**

Explanation:

Explanation

According to the Palo Alto Networks documentation<sup>1</sup>, the firewall can use three external authentication services to authenticate admins into the Palo Alto Networks NGFW without creating administrator accounts on the firewall: RADIUS, TACACS+, and SAML. These services allow the firewall to verify the credentials of admins against an external server and grant them access based on their assigned roles and permissions.

Therefore, the correct answer is A, B, and E.

The other options are not external authentication services that the firewall can use to authenticate admins:

Kerberos: This option is not an external authentication service that the firewall can use to authenticate admins. Kerberos is a protocol that allows users to access network resources using a single sign-on mechanism. The firewall can use Kerberos to authenticate users for GlobalProtect VPN or Captive Portal, but not for admin access.

LDAP: This option is not an external authentication service that the firewall can use to authenticate admins. LDAP is a protocol that allows querying and modifying directory services over a network. The firewall can use LDAP to retrieve user and group information from an external server, but not to authenticate admins.

#### NEW QUESTION # 61

Which feature prevents the submission of corporate login information into website forms?

- A. User-ID

- B. Credential phishing prevention
- C. File blocking
- D. Data filtering

**Answer: B**

Explanation:

Reference:

<https://www.paloaltonetworks.com/cyberpedia/how-the-next-generation-security-platform-contributes-to-gdpr-compliance>

"Credential phishing prevention works by scanning username and password submissions to websites and comparing those submissions against valid corporate credentials. You can choose what websites you want to either allow, alert on, or block corporate credential submissions to based on the URL category of the website. Alternatively, you can present a page that warns users against submitting credentials to sites classified in certain URL categories. This gives you the opportunity to educate users against reusing corporate credentials, even on legitimate, non-phishing sites. In the event that corporate credentials are compromised, this feature allows you to identify the user who submitted credentials so that you can remediate."

## NEW QUESTION # 62

.....

After clients pay successfully for our Palo Alto Networks Certified Network Security Engineer Exam guide torrent, they will receive our mails sent by our system in 5-10 minutes. Then they can click the mail and log in to use our software to learn immediately. For that time is extremely important for the learners, everybody hope that they can get the efficient learning. So clients can use our PCNSE test torrent immediately is the great merit of our product. We have set strict computer procedure to protect the client's privacy about purchasing PCNSE Study Tool and there is no one which can see the privacy information through online or other illegal channels except us. We have set the rigorous interception procedure to protect others from stealing the client's personal privacy information.
