

Fantastic HPE0-J68 Reliable Test Braindumps Covers the Entire Syllabus of HPE0-J68

BTW, DOWNLOAD part of TrainingQuiz HPE0-J68 dumps from Cloud Storage: https://drive.google.com/open?id=1Bkpb04uk__zsXr7Znt0WnFhR3Qg3fkOZ

Our HPE0-J68 learning materials are new but increasingly popular choices these days which incorporate the newest information and the most professional knowledge of the practice exam. All points of questions required are compiled into our HPE0-J68 Preparation quiz by experts. By the way, the HPE0-J68 certificate is of great importance for your future and education. Our HPE0-J68 practice materials cover all the following topics for your reference.

HP HPE0-J68 exam consists of 60 multiple-choice questions and must be completed within 90 minutes. To pass the exam, candidates must score at least 70%. HPE0-J68 Exam is available in English and Japanese and can be taken at any Pearson VUE testing center worldwide.

Cost Effective HPE0-J68 Dumps | HPE0-J68 Study Materials Review

Where can you purchase the best quality and cheapest HPE0-J68 exam dumps? TrainingQuiz will meet all examinees' needs with cheaper price and high quality HPE0-J68 exam dumps and answers. The sales of HPE0-J68 certification training materials on TrainingQuiz site is in front of the same work areas. The passing rate of our HPE0-J68 VCE Dumps is 100%. In a word, choosing TrainingQuiz for you to pass HPE0-J68 test is equal to choose success.

HPE Storage Solutions Sample Questions (Q43-Q48):

NEW QUESTION # 43

During which event will HPE 3par Storeserv persistent port feature provide transparent and uninterrupted failover (Select two)

- A. B-series SAN switch upgrades
- B. Node maintenance or failure
- C. Loss of persistent cache

- D. Loss of full-mesh cluster interconnect
- E. Firmware upgrade

Answer: B,E

Explanation:

The HPE 3PAR StoreServ Persistent Port feature ensures transparent and uninterrupted failover during specific events such as firmware upgrades and node maintenance or failure. During a firmware upgrade, the persistent port feature allows data paths to automatically fail over to an alternate path, maintaining uninterrupted host connectivity. Similarly, in the event of node maintenance or failure, the persistent port feature seamlessly redirects I/O to another available node without disrupting the service, ensuring high availability and reliability.

NEW QUESTION # 44

The customer is using HPE GreenLake for Backup & Recovery. Which steps are necessary to define a Protection Policy in HPE GreenLake Data Services console?

- A. Define the name of policy, scheduling and destination
- B. Define Hyper-V or vCenter server and snapshot frequency
- C. Create iSCSI tunnel between array and d2d appliance
- D. Define source and destination array

Answer: A

Explanation:

When defining a Protection Policy in the HPE GreenLake Data Services console for HPE GreenLake for Backup & Recovery, you must define the name of the policy, scheduling, and destination. This process involves specifying how and when backups should occur and where the backed-up data should be stored. The flexibility in setting these parameters allows for tailored backup solutions that meet specific recovery objectives and compliance requirements.

For more details, refer to:

NEW QUESTION # 45

A small company has recently purchased an MSA and two B-series SN3000B switches. In an effort save money, they installed the solution themselves. They call you complaining they can now see the multiple volumes on the MSA after creating just a single volume.

What should you advise them to do?

- A. Enable MPIO on their host
- B. Set volume's tier affinity to Performance
- C. Enable Smart SAN on the MSA 2052
- D. Enable zoning on the SN3000B switches

Answer: D

Explanation:

The issue of seeing multiple volumes after creating just a single volume on the MSA is likely due to a lack of zoning on the Fibre Channel switches. Zoning is a method used in Fibre Channel networks to segment a fabric into smaller, manageable zones, which helps in controlling access between devices. By enabling zoning on the SN3000B switches, the customer can isolate the connections and ensure that only the desired host can see specific volumes. This prevents the scenario where multiple volumes are visible to a host that should only have access to one.

NEW QUESTION # 46

A customer has completely virtualized their datacenter with VMware. You propose a SimpliVity solution to replace their aging hardware.

Which SimpliVity features should you emphasize in your presentation? (Choose two.)

- A. It uses native hypervisor management tools for management
- **B. It utilizes the Storage Management Utility for management and monitoring**
- C. It utilizes a unified ASIC for performance
- **D. It includes deduplication and backup capabilities**
- E. It provides S3 file access

Answer: B,D

NEW QUESTION # 47

Your customer would like you to prepare an upgrade plan that includes adding extra disks to their HPE GreenLake for Block Storage array to boost performance optimization. What would be the optimal minimum upgrade?

- **A. 2 SSDs per enclosure**
- B. SSD per enclosure
- C. 1 SSD per system
- D. 2 SSDs per system

Answer: A

Explanation:

For optimal performance optimization in an HPE GreenLake for Block Storage array, the recommended minimum upgrade would be to add 2 SSDs per enclosure. This configuration helps to balance the load across the storage system and enhances performance by improving data distribution and access speeds. By adding SSDs to each enclosure, you ensure that the performance benefits are evenly distributed, which is crucial for maintaining consistent high-speed access across the entire storage environment.
