AZ-801 Valid Exam Simulator, AZ-801 Exam Syllabus

Whether you are a newcomer or an old man with more experience, AZ-801 study materials will be your best choice for our professional experts compiled them based on changes in the examination outlines over the years and industry trends. AZ-801 test

torrent not only help you to improve the efficiency of learning, but also help you to shorten the review time of up to several months to one month or even two or three weeks, so that you use the least time and effort to get the maximum improvement. And with our AZ-801 Exam Questions, your success is guaranteed.

The Microsoft AZ-801 exam measures the candidate's ability to configure and manage advanced services in a hybrid environment. It assesses the candidate's knowledge and skills in managing Azure resources, managing hybrid identities, managing and securing hybrid networking, managing hybrid storage solutions, and managing backup and disaster recovery solutions. AZ-801 Exam is designed to validate the candidate's expertise in configuring and managing advanced services in a hybrid environment.

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q10-Q15):

NEW QUESTION # 10

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains a print server named Server1. All printers are deployed to users by using a Group Policy Object (GPO) named GPO1.

You deploy a new server named Server2.

You need to decommission Server1. The solution must meet the following requirements:

- * Migrate the shared printers to Server2 by using the Printer Migration Wizard.
- * Ensure that the users use the printers on Server2.
- * Minimize downtime for the users.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Decommission Server1.

Import the printers on Server2.

Deploy Windows Server Hybrid Cloud Print.

Export the printers on Server1.

Update the service principal name (SPN) of each printer.

Modify GPO1.

Answer Area

Answer:

Explanation:

Explanation

Graphical user interface, text, application, email Description automatically generated

The screenshot shows the 'Answer Area' with four actions listed in a sequence from top to bottom: 'Export the printers on Server1.', 'Import the printers on Server2.', 'Modify GPO1.', and 'Decommission Server1.'. The actions are presented in a light blue box with a white border. A Microsoft logo is visible in the bottom right corner of the box.

NEW QUESTION # 11

You are planning the www.fabrikam.com website migration to support the Azure migration plan.

How should you configure WebApp1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

To enable WebApp1 to handle requests for the website:

- Add a custom domain name.
- Create a deployment slot.
- Create a private endpoint.

To point client connections to WebApp1:

- Add HTTP redirect rules on WEB1 and WEB2.
- Implement Azure Front Door.
- Implement Azure Traffic Manager.
- Modify a DNS record.

Answer:

Explanation:

Explanation

Box 1: Add a custom domain name

To migrate www.fabrikam.com website to an Azure App Service web app, you need to add Fabrikam.com as a custom domain in Azure. This will make the domain name available to use in the web app.

Box 2: Modify a DNS record

You need to change the DNS record for www.fabrikam.com to point to the Azure web app.

HTTP redirect rules won't work because WEB1 and WEB2 will be decommissioned.

NEW QUESTION # 12

Your network contains an Active Directory Domain Services (AD DS) domain that has the Active Directory Recycle Bin enabled.

All domain controllers are backed up daily.

You accidentally remove all the users from a domain group.

You need to get a list of the users that were previously in the group.

Which four actions should you perform in sequence from a domain controller? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Action

- Mount Active Directory to port 51389.
- View the membership of the group.
- Restore the system state to an alternate location.
- From the Deleted Objects container in Active Directory Administrative Center, run the Restore task.
- From Active Directory Users and Computers, change the domain controller to localhost:51389.
- Restore the group from the Active Directory Recycle Bin.

Answer Area

Answer:

Explanation:

Action

- Mount Active Directory to port 51389.
- View the membership of the group.
- Restore the system state to an alternate location.
- From the Deleted Objects container in Active Directory Administrative Center, run the Restore task.
- From Active Directory Users and Computers, change the domain controller to localhost:51389.
- Restore the group from the Active Directory Recycle Bin.

Answer Area

- Restore the system state to an alternate location.
- Mount Active Directory to port 51389.
- From Active Directory Users and Computers, change the domain controller to localhost:51389.
- View the membership of the group.

Explanation:

Graphical user interface, text, table Description automatically generated with medium confidence

Restore the system state to an alternate location.
Mount Active Directory to port 51389.
From Active Directory Users and Computers, change the domain controller to localhost:51389.
View the membership of the group.

NEW QUESTION # 13

You need to implement alerts for the domain controllers. The solution must meet the technical requirements.

What should you do on the domain controllers, and what should you create on Azure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

On the domain controllers:	▼ Create a Data Collector Set in Performance Monitor. Modify the Performance Monitor Users group. Install the Azure Monitor agent.
In Azure:	▼ Create an Azure SQL database. Create a Storage Sync Service. Create an Azure Log Analytics workspace. Create an Azure Storage account.

Answer:

Explanation:

On the domain controllers:

▼

Create a Data Collector Set in Performance Monitor.
Modify the Performance Monitor Users group.
Install the Azure Monitor agent.

In Azure:

▼

Create an Azure SQL database.
Create a Storage Sync Service.
Create an Azure Log Analytics workspace.
Create an Azure Storage account.

Explanation:

Text Description automatically generated

On the domain controllers:

- Create a Data Collector Set in Performance Monitor.
- Modify the Performance Monitor Users group.
- Install the Azure Monitor agent.

In Azure:

- Create an Azure SQL database.
- Create a Storage Sync Service.
- Create an Azure Log Analytics workspace.
- Create an Azure Storage account.

[https://docs.microsoft.com/en-us/azure/azure-monitor/agents/azure-monitor-agent-overview?](https://docs.microsoft.com/en-us/azure/azure-monitor/agents/azure-monitor-agent-overview?tabs=PowerShellWindows)

tabs=PowerShellWindows

NEW QUESTION # 14

What is the effective minimum password length for User1 and Admin1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

User1:

- 8
- 9
- 10
- 11
- 12

Admin1:

- 8
- 9
- 10
- 11
- 12

Answer:

Explanation:

User1:

8
9
10
11
12

Admin1:

8
9
10
11
12

Explanation:

User1:

8
9
10
11
12

Admin1:

8
9
10
11
12

Box 1: 9

When multiple PSOs apply to a user, the PSO with the highest precedence (lowest precedence number) applies which in this case is PSO1.

Box 2: 8

There are no PSOs applied to Admin1 so the password policy from the Default Domain GPO applies.

The Minimum password length setting in GPO1 would only apply to local user accounts on computers in OU1. It does not apply to domain user accounts.
