Oracle Cloud Infrastructure 2025 Migration Architect Professional Sample Questions (Q54-Q59):

NEW QUESTION # 54
You are working as a migration cloud architect in an organization where you are responsible for cloud migrations from an on-premises data center. This environment consists of VMware and KVM infrastructures, both hosting a set of production application workloads. As part of a migration process, you are tasked with identifying appropriate methods for migrating workloads from both source environments into Oracle Cloud VMware Solution (OCVS). The application owners would like to validate the VMs after the migration and before switching over those workloads to production. Which two migration types can be used?

- A. HCX vMotion
- B. Oracle Cloud Migrations service
- C. HCX OS Assisted Replication
- D. HCX Bulk Migration
- E. Block Volume Replication

Answer: A,D

Explanation:
HCX Bulk Migration and HCX vMotion are suitable methods for migrating workloads from VMware and KVM infrastructures to Oracle Cloud VMware Solution (OCVS). Bulk Migration allows for bulk migration of VMs, and vMotion allows live migration without downtime, both enabling VM validation before finalizing migration.

NEW QUESTION # 55
Your company wants to expand its cloud infrastructure footprint by adopting Oracle Cloud VMware Solution (OCVS). The OCVS Software Defined Data Center (SDDC) platform will be dedicated to hosting business-critical workloads and should avoid single points of failure within its architecture. Which two would be considered while setting up the solution?

- A. OCI Fault Domain
- B. vSphere Distributed Resource Scheduler (DRS)
- C. HCX Mobility Groups
- D. vSAN Fault Domain

Answer: A,D

Explanation:
OCI Fault Domains and vSAN Fault Domains are critical considerations to avoid single points of failure and ensure high availability for business-critical workloads hosted on the OCVS SDDC platform.

NEW QUESTION # 56
Your company is looking to migrate its IT infrastructure into Oracle Cloud VMware Solution (OCVS). The source infrastructure includes a variety of workloads, such as a few business-critical VMs that require continuous availability, and a large set of non-critical dev-test VMs. As a migration cloud architect, you are exploring Hybrid Cloud Extension (HCX) migration methods to identify the best approaches for each type of workload. Which HCX migration method would be the most appropriate to use in order to migrate both business-critical VMs and dev-test VMs?

- A. HCX Bulk Migration for migrating the business-critical VMs, and Cold Migrations for non-critical dev-test VMs
- B. Cold Migration for migrating both business-critical and non-critical dev-test VMs
- C. HCX Bulk Migration for migrating business-critical VMs and HCX vMotion for non-critical dev-test VMs
- D. HCX vMotion for migrating business-critical VMs, and Cold Migrations for non-critical dev-test VMs

Answer: D

Explanation:
HCX vMotion is the most appropriate method for migrating business-critical VMs as it allows live migration without downtime, ensuring continuous availability. Cold Migrations can be used for non-critical dev-test VMs since downtime is acceptable for these workloads.

NEW QUESTION # 57
Your company is planning to decommission their on-premises data center hosting a set of Virtual Machines (VMs) that heavily rely on VMware technologies. The goal is to migrate those VMs into OCI, make this transition as quick as possible, ensuring the environment is highly available and can be controlled by the company after the migration. What are the two advantages of using Oracle Cloud VMware Solution (OCVS)?

- A. The company can free up their IT team as Oracle takes over the management, including updates and patching of the OCVS environment
- B. The company can bring their own product licenses (BYOL) for VMware products such as vSphere, vSAN, and NSX
- C. The company can move those application VMs into OCVS "as-is"
- D. The company can control root access to the OCVS environment
- E. The company could convert all of VMware-based applications into native OCI Compute instances

Answer: B,C

Explanation:
Two key advantages of using OCVS are the ability to bring your own licenses (BYOL) for VMware products, and the ability to move application VMs "as-is," minimizing the need for modifications.

NEW QUESTION # 58
How does containerization differ from virtualization in terms of resource optimization?

- A. Containers require a full operating system to run, whereas virtual machines share a single operating system
- B. Virtualization maximizes efficiency by running multiple applications on the same OS kernel
- C. Containerization allows for more efficient utilization of hardware resources by sharing the host operating system
- D. Virtualization offers more flexibility in terms of application dependencies

Answer: C

Explanation:
Containerization allows for more efficient utilization of hardware resources by sharing the host operating system. Containers only package the application and its dependencies, running on top of the host OS without the need for a separate guest OS.
