

Fantastic SAP Guaranteed C-TS414-2023 Questions Answers - DumpTorrent Free Download

What's more, part of that DumpTorrent C-TS414-2023 dumps now are free: <https://drive.google.com/open?id=16Ep5vY3xQJvvpMUaWmoW6vS6HBzq-BLN>

DumpTorrent C-TS414-2023 practice test has real C-TS414-2023 exam questions. You can change the difficulty of these questions, which will help you determine what areas appertain to more study before taking your SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management (C-TS414-2023) exam dumps. Here we listed some of the most important benefits you can get from using our SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management (C-TS414-2023) practice questions.

With the efforts of our IT professional experts, DumpTorrent C-TS414-2023 new practice questions pdf can guarantee you 99.9% first time pass rate. The C-TS414-2023 questions & answers are verified and checked by our experienced IT experts. With the C-TS414-2023 Latest Exam Simulator, you can attend your exam with relax and pleasure mood. Thus, the C-TS414-2023 valid and latest dumps together with positive attitude will contribute to your SAP C-TS414-2023 actual test.

C-TS414-2023 Valid Test Topics & Valid C-TS414-2023 Test Practice

Infinite striving to be the best is man's duty. We have the responsibility to realize our values in the society. Of course, you must have enough ability to assume the tasks. Then our C-TS414-2023 study materials can give you some help. First of all, you can easily pass the exam and win out from many candidates. The C-TS414-2023 certificate is hard to get. If you really crave for it, our C-TS414-2023 study materials are your best choice. We know it is hard for you to make decisions. You will feel sorry if you give up trying.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management Sample Questions (Q56-Q61):

NEW QUESTION # 56

You are using quantitative inspection characteristics during a production results recording. What are some of the results confirmation control indicators available for quantitative results? Note: There are 3 correct answers to this question.

- A. Summarized recording
- B. Mean value
- C. Mean value and standard deviation
- D. Classed recording
- E. Single result

Answer: A,D,E

Explanation:

For quantitative characteristics in results recording (transaction QE51N), control indicators in the MIC (transaction QS23) define how results are confirmed:

- * Summarized Recording (B): Records a single aggregated value (e.g., average) for the sample, a standard option for efficiency.
- * Classed Recording (C): Results are grouped into classes (e.g., ranges like 10-15 mm), common for statistical analysis.
- * Single Result (D): Each individual result is recorded separately, ideal for detailed tracking.
- * Mean Value and Standard Deviation (A): These are calculated outputs, not control indicators for recording type.
- * Mean Value (E): This is a result, not a control indicator for how data is entered.

Thus, "Summarized recording," "Classed recording," and "Single result" are the correct answers. References:

SAP Help Portal - "Results Recording for Quantitative Characteristics"; SAP S/4HANA QM User Guide - "Control Indicators".

NEW QUESTION # 57

Which settings are required for the immediate creation of inspection instruction during goods receipt process. Note : 3 correct answer

- A. Control setting in characteristic of the task list
- B. Inspection type settings in the implementation guide (IMG)
- C. Settings for print control in implementation Guide (IMG)
- D. Control setting in quality info record
- E. Inspection type settings in Material master

Answer: A,B,C

NEW QUESTION # 58

The Determine Tasks function can be used during quality notification processing. What can be defined in the response profile? Note: There are 2 correct answers to this question.

- A. Notification type
- B. Task code
- C. Task code group
- D. Cause code

Answer: B,C

Explanation:

The response profile (transaction QMSM) in QM notifications defines automatic tasks via the "Determine Tasks" function:

- * Task Code Group (A): Specifies the group (e.g., from catalog type 2) containing task codes, defining the task category (SPRO > QM > Quality Notifications > Response Profile).
- * Task Code (C): The specific code within the group (e.g., "Investigate") is defined, detailing the task to be created.
- * Cause Code (B): Cause codes (catalog type 5) are for problem analysis, not task definition.
- * Notification Type (D): The type is set at the notification level, not in the response profile.

Thus, "Task code group" and "Task code" are the correct answers. References: SAP Help Portal - "Response Profiles in QM"; SAP S/4HANA QM User Guide - "Notification Tasks".

NEW QUESTION # 59

In the material master, at which organizational level do you assign a Catalog Profile?

- A. Business area level
- B. Client level

- C. Company code level
- **D. Plant level**

Answer: D

Explanation:

The catalog profile in the material master determines the set of codes available for quality processes like defect recording or usage decisions. Its assignment occurs at a specific organizational level:

* Plant Level (D): In the material master (transaction MM01/MM02), the catalog profile is assigned in the Quality Management view under the "Inspection Setup" section (field QMAT-PROF). This is done at the plant level because QM processes (e.g., inspections) are plant-specific, and the catalog profile must align with the plant's quality requirements. This is standard SAP behavior, ensuring flexibility across different plants for the same material.

* Company Code Level (A): QM settings are not managed at the company code level, as this is a financial organizational unit unrelated to inspection processes.

* Client Level (B): Client-level settings are too broad and apply globally, whereas catalog profiles need plant-specific granularity.

* Business Area Level (C): Business areas are used for financial reporting, not QM organizational assignments.

Thus, "Plant level" is the correct answer, reflecting SAP's organizational structure for QM data. References:

SAP Help Portal - "Material Master in QM"; SAP S/4HANA QM User Guide - "QM View in Material Master".

NEW QUESTION # 60

Where do you define the procedure for calculation of the quality score at usage decision?

- A. Inspection type settings in the material master
- B. Procurement data in the quality management view of the material master
- **C. Usage decision code**
- D. Quality info record: Procurement

Answer: C

Explanation:

The quality score in SAP S/4HANA Quality Management reflects the quality performance of an inspection lot, calculated at the usage decision (UD) stage. This score can influence subsequent processes, such as supplier evaluation. The procedure for its calculation is defined as follows:

* Usage Decision Code (A): The quality score calculation procedure is assigned to the usage decision codes in Customizing (SPRO > Quality Management > Quality Inspection > Usage Decision > Define Quality Score Procedure). Each UD code (e.g., "Accepted," "Rejected") can have a specific score or formula linked to it, determining how the system computes the score based on inspection results. This is the correct and standard location for this setting.

* Procurement Data in the Quality Management View of the Material Master (B): This area (transaction MM02, QM view) contains settings like inspection type or control keys but does not define the quality score calculation procedure.

* Quality Info Record: Procurement (C): The quality info record (transaction QI01/QI02) manages supplier-specific QM settings (e.g., release status), but it does not configure the quality score calculation procedure.

* Inspection Type Settings in the Material Master (D): Inspection type settings (e.g., 01 for goods receipt) in the material master activate QM processes but do not define the score calculation logic.

Thus, "Usage decision code" is the correct answer, as it directly ties the score calculation to the UD process.
