- A. The frequency of software updates?
- B. The number of users currently logged in?
- C. The potential impact of the automated action on business operations?
- D. The aesthetic layout of the FortiSIEM dashboard?

Answer: C

NEW QUESTION # 32

Refer to the exhibit.

If the Z-score for this rule is greater than or equal to three, what does this mean?

- A. The rate of firewall connection is above the current average value.
- B. The rate firewall connection is above the historical average value.
- C. The rate of firewall connection is optimum.
- D. The rate of firewall connection is below historical average value.

Answer: B

Explanation:

The Z-score formula in the expression builder calculates how many standard deviations the current value is from the historical average. The formula used is:

$$Z = \frac{\text{AVG(Firewall Session)} - \text{STAT_AVG(AVG(Firewall Session);112)}}{\text{STAT_STDDEV(AVG(Firewall Session);112)}}$$

AVG(Firewall Session) represents the current firewall session rate.

STAT_AVG(AVG(Firewall Session);112) represents the historical average over a 112-time unit window.

STAT_STDDEV(AVG(Firewall Session);112) represents the historical standard deviation over the same period.

A Z-score ≥ 3 indicates that the current firewall session rate is significantly higher than the historical average (3 standard deviations above the mean), signaling an anomaly.
