SPLK-1002 Test Book - Practice SPLK-1002 Test

Our SPLK-1002 training quiz will be your best teacher who helps you to find the key and difficulty of the exam, so that you no longer feel confused when review. Our SPLK-1002 study materials will be your best learning partner and will accompany you through every day of the review. Our SPLK-1002 Exam Quiz will help you to deal with all the difficulties you have encountered in the learning process and make you walk more easily and happily on the road of studying.

Splunk Core Certified Power User Exam Sample Questions (Q209-Q214):

NEW QUESTION # 209

These kinds of charts represent a series in a single bar with multiple sections

- **A. Stacked**
- B. Split-Series
- C. Omit nulls
- D. Multi-Series

Answer: A

Explanation:

Explanation

Stacked charts represent a series in a single bar with multiple sections. A chart is a graphical representation of data that shows trends, patterns, or comparisons. A chart can have different types, such as column, bar, line, area, pie, etc. A chart can also have different modes, such as split-series, multi-series, stacked, etc. A stacked chart is a type of chart that shows multiple series in a single bar or area with different sections for each series

NEW QUESTION # 210

What does the following search do?

- A. Creates a table that groups the total number of users by vegetarian corndogs.
- B. Creates a table of the total count of users and split by corndogs.
- C. Creates a table with the count of all types of corndogs eaten split by user.
- **D. Creates a table of the total count of mysterymeat corndogs split by user.**

Answer: D

Explanation:

The search string below creates a table of the total count of mysterymeat corndogs split by user.

| stats count by user | where corndog=mysterymeat

The search string does the following:

* It uses the stats command to calculate the count of events for each value of the user field. The stats command creates a table with two columns: user and count.

* It uses the where command to filter the results by the value of the corndog field. The where command only keeps the rows where corndog equals mysterymeat.

Therefore, the search string creates a table of the total count of mysterymeat corndogs split by user.

NEW QUESTION # 211

Two separate results tables are being combined using the join command. The outer table has the following values:

Refer to following Tables

email	employeeNumber
jsmith@acme.com	1
mcarpenter@acme.com	2
jrogers@acme.com	3
bsparrow@acme.com	4
eripper@acme.com	5

The inner table has the following values:

employeeNumber	firstName	lastName
1	John	Smith
2	Mary	Carpenter
3	Jeff	Rogers

The line of SPL used to join the tables is: | join employeeNumber type=outer How many rows are returned in the new table?

- A. Three
- B. Zero
- **C. Eight**
- D. Five

Answer: C

Explanation:

When performing an outer join in Splunk using the | join employeeNumber type=outer command, it combines the rows from both tables based on the employeeNumber field. An outer join returns all rows from both tables, with matching rows from both sides where available. If there is no match, the result is NULL on the side of the join where there is no match.

In the provided tables, there are five rows in the first table and three in the second. Since it's an outer join, all rows from both tables will be returned. This means the new table will have a total of eight rows, combining the matched rows and the unmatched rows from both tables.

Reference:

Splunk Documentation on the join command.

Splunk Community discussions on the usage of join and types of joins.

NEW QUESTION # 212

A user runs the following search:

index=X sourcetype=Y | chart count (domain) as count, sum (price) as sum by product, action useNull=f useOther=f Which of the following table headers match the order this command creates?

- A. Product, sum: addtocart, sum: remove, sum: purchase, count: addtocart, count: remove, count: purchase
- **B. Product, count: addtocart, count: remove, count: purchase, sum: addtocart, sum: remove, sum: purchase**
- C. Count: product, sum: product, count: action, sum: action
- D. The chart command does not allow for multiple statistical functions.

Answer: B

Explanation:

The correct answer is C. Product, count: addtocart, count: remove, count: purchase, sum: addtocart, sum: remove, sum: purchase1.

In Splunk, the chart command is used to create a table or a chart visualization from your data2.

The chart command takes at least one function and one field, and optionally another field to group by2.

In the given search, the chart command is used with two functions (count and sum), two fields (domain and price), and two fields to group by (product and action). The useNull=f and useOther=f options are used to exclude null values and other values from the chart2.

The `chart` command creates a table with headers that match the order of the fields and functions in the command. The headers for the `count` function are prefixed with `count:`, and the headers for the `sum` function are prefixed with `sum:`. The values of the `product` and `action` fields are used as the suffixes for the headers. Therefore, the table headers created by this command are `Product`, `count: addtocart`, `count: remove`, `count: purchase`, `sum: addtocart`, `sum: remove`, and `sum: purchase`.

NEW QUESTION # 213

When should the `delimiter` method be used in the Field Extractor?

- A. When the events do not have the correct permissions set.
- **B. When the events are separated by a consistent character or set of characters.**
- C. When the events need a regular expression to define the matching pattern.
- D. When the events need to be calculated using special characters.

Answer: B

Explanation:

The `delimiter` method in the Field Extractor should be used when fields in events are separated consistently by a specific character (such as a comma, tab, or pipe). This method simplifies extraction without requiring complex regular expressions.

Reference:

Splunk Power User Study Guide, Field Extraction Section

Splunk Docs: Using the Field Extractor

"Use the `delimiter` extraction method when your data fields are consistently separated by a specific delimiter character."

NEW QUESTION # 214

.....

The team appointed by the VCETorrent is dedicated and hardworking and strives hard to refine the Splunk SPLK-1002 dumps and make them meet the standards set by the Splunk.
