Mule-Dev-201 Latest Real Test, Mule-Dev-201 Training Tools

Finding 60 exam preparation material that suits your learning preferences, timetable, and objectives is essential to prepare successfully for the test. You can prepare for the Salesforce Mule-Dev-201 test in a short time and attain the Salesforce Certified MuleSoft Developer certification exam with the aid of our updated and valid exam questions. We emphasize quality over quantity, so we provide you with Salesforce Mule-Dev-201 Actual Exam questions to help you succeed without overwhelming you.

Salesforce Certified MuleSoft Developer Sample Questions (Q76-Q81):

NEW QUESTION # 76

How would you debug Mule applications?

- A. By Deploying apps on production
- B. Checking RAML specifications
- C. Using debugger component
- D. Use third party debugger application

Answer: C

Explanation:

Debugger can be used to debug applications to see event data move from one flow to other

NEW QUESTION # 77

Refer to the exhibits. The main flow contains an HTTP Request in the middle of the flow. The HTTP Listeners and HTTP

Request default configurations.

A web client submits a request to the main flow's HTTP Listener that includes query parameters for the pedigree of the piano. What values are accessible to the Logger component at the end of the main flow?

- A. payloadpedigree query params
- B. payload
- C. payloadproducer var
- D. payloadpedigree query params producer var

Answer: C

Explanation:

In this case as outbound call is made using HTTP: POST /child , all attributes will be replaced by this invocation. Hence query parameter will not be accessible at logger. Hence correct answer is option 2

NEW QUESTION # 78

A shopping API contains a method to look up store details by department.

To get the information for a particular store, web clients will submit requests with a query parameter named departmentand uri parameter named storeId What is valid RAML snippet that supports requests from a web client to get a data for a specific storeId and department name?

- A. 1./{storeId} 2.get 3.queryParameter 4.department:
- B. 1.get 2.uriParameter 3.{storeId} 4.queryParameter 5.department:
- C. 1.get 2.queryParameter 3.department 4.uriParameter 5.{storeId} :
- D. 1./department 2.get 3.uriParameter 4.storeId:

Answer: A

Explanation:

Lets revise few concepts RAML which can help us to find the answer of this question.

URI Parameters

Lets have a look at below example.

```

* /foos:
* /{id}:
* /name/{name}:

```

Here, the braces { } around property names define URI parameters. They represent placeholders in each URI and do not reference root-level RAML file properties as we saw above in the baseUri declaration. The added lines represent the resources /foos/{id} and /foos/name/{name}.

Query Parameters

Now we'll define a way to query the foos collection using query parameters. Note that query parameters are defined using the same syntax that we used above for data types:

```

* /foos:
* get:
* description: List all Foos matching query criteria, if provided;
* otherwise list all Foos

```

* queryParameters:
* name?:string
* ownerName?:string

Based on the above information , below is the only option which defines storeid as uri parameter and department as query parameter.

* /{storeId}:
* get:
* queryParameter:
* department:

NEW QUESTION # 79

Refer to the exhibit.

A Mule event is composed of a hierarchy of objects. Where in the hierarchy are variables stored?

- A. Mule event
- B. Mule message payload
- C. Mule message attributes
- D. Mule message

Answer: A

Explanation:

Variables are stored under Mule event. Please refer to below image for the hierarchy .

Graphical user interface Description automatically generated

NEW QUESTION # 80

A web client sends a request to `http://localhost:8081?dept=sales`. What is the correct DataWeave expression to access the value of `dept`?

- A. `message.queryParams.dept`
- B. `attributes.queryParams.dept`
- C. `attributes.dept`
- D. `vars.dept`

Answer: B

NEW QUESTION # 81

.....
