

Juniper JN0-224 Reliable Test Prep | JN0-224 New Braindumps

Your opportunity to survey the Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) exam questions before buying it will relax your nerves. DumpsMaterials proudly declares that it will not disappoint you in providing the best quality Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) study material. The guarantee to give you the money back according to terms and conditions is one of the remarkable facilities of the DumpsMaterials.

Juniper JN0-224 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Rest API: This domain covers Junos REST API implementation, REST API Explorer tool, and cURL usage for HTTP-based device management and configuration.
Topic 2	<ul style="list-style-type: none"> Junos Automation Stack and DevOps Concepts: This domain covers fundamental automation tools, frameworks, APIs, and DevOps culture applicable to Junos platform operations and network management.
Topic 3	<ul style="list-style-type: none"> Data Serialization: This domain addresses YAML and JSON formats used for structured data representation and exchange in network automation workflows.
Topic 4	<ul style="list-style-type: none"> Python PyEZ: This domain examines Python programming with PyEZ library for Junos automation, including JSNAPy, Jinja2 templates, RPC calls, exception handling, and device configuration management.
Topic 5	<ul style="list-style-type: none"> NETCONF XML API: This domain focuses on XML syntax, XPath expressions, NETCONF protocol, and XML API functionality for programmatic device configuration and communication.

JN0-224 New Braindumps, Exam JN0-224 Quiz

Every person in IT industry should not just complacent with own life. Now the competitive pressures in various industries are self-evident, and the IT industry is no exception. So if you have a goal, then come true it courageously. Pass the Juniper JN0-224 Exam is a competition. If you passed the exam, then you will have a brighter future. DumpsMaterials can provide you with the true and accurate training materials to help you pass the exam. And then you can achieve your ideal.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q37-Q42):

NEW QUESTION # 37

You want to use a Python package or module.

In this scenario, which statement would accomplish this task?

- A. input
- B. dir
- C. reap
- D. Import

Answer: D

Explanation:

In Python, to use a package or module, you use the import statement. This statement allows you to load a module into your script so that you can use its functions, classes, and variables. For example, if you wanted to use the math module, you would write import math. This makes all the functions and constants in the math module available for use in your program.

Option A (reap), B (dir), and C (input) do not serve the purpose of importing modules. dir is used to list the attributes of an object, input is used to get user input, and reap is not a valid Python command related to importing modules.

Supporting Reference:

Python Documentation on Imports: The Python documentation provides clear guidelines on how to use the import statement to include modules in your Python scripts.

NEW QUESTION # 38

Which two programming languages would be used for on-box scripting with Junos devices? (Choose two.)

- A. Puppet
- B. XSLT
- C. Ansible
- D. Python

Answer: B,D

NEW QUESTION # 39

Which two statements are correct about a Python list data type? (Choose two.)

- A. The data contained in a list data type is not sequenced or indexed.
- B. The data contained in a list data type cannot be modified.
- C. The data contained in a list data type is sequenced and indexed starting from 0.
- D. The data contained in a list data type can be modified.

Answer: C,D

Explanation:

Python lists have the following characteristics:

Modifiable Data (A): Lists are mutable, meaning you can change, add, or remove elements after the list has been created.

Sequenced and Indexed (B): Lists maintain the order of their elements and are indexed starting from 0. This means you can access elements by their position in the list.

Option C is incorrect because lists are mutable, allowing modifications. Option D is incorrect because lists are indeed sequenced and indexed, unlike dictionaries.

Reference:

Python Official Documentation: Covers the properties of lists, including mutability and indexing.

Python Data Structures Guide: Explains list operations and how to manipulate them.

NEW QUESTION # 40

Which two data structures are used in JSON? (Choose two.)

- A. tuples
- B. dictionaries
- C. objects
- D. arrays

Answer: C,D

Explanation:

In JSON (JavaScript Object Notation), the two primary data structures are:

Objects: These are collections of key-value pairs, where each key is a string, and the value can be a string, number, array, boolean, or another object. In Python, this structure is analogous to a dictionary.

Arrays: These are ordered lists of values, where each value can be of any data type, including another array or object. In Python, this structure is similar to a list.

Option A (tuples) and Option D (dictionaries) refer to Python-specific data structures and are not directly used in JSON.

Supporting Reference:

JSON Documentation and Tutorials: JSON objects and arrays are the standard data structures used in this format, as described in many tutorials and the official JSON documentation.

NEW QUESTION # 41

What is an example of correct XML syntax?

- A. <Devices><hostname>vMX1<Devices/X>/hostname>
- B. <Device3><hostname>vMX1</hostname><Devices/>
- C. <Devices><hostname>vMX1<Devices/>
- D. <Devices><hostname>vMX1</hostname><Device3>

Answer: A

NEW QUESTION # 42

.....

Juniper trained experts have made sure to help the potential applicants of Juniper JN0-224 certification to pass their Juniper JN0-224 exam on the first try. Our PDF format carries real Automation and DevOps, Associate (JNCIA-DevOps) exam dumps. You can use this format of Juniper JN0-224 Actual Questions on your smart devices.
