## **SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Sales Sample Questions (Q22-Q27):**

### **NEW QUESTION # 22**

What settings should you make to ensure precise scheduling is used when the system performs delivery scheduling? Note: There are 3 correct answers to this question.

- A. Assign a shift sequence to the working times.
- B. Maintain the transit time in the route in hours and minutes.
- C. Assign a set of working times to the shipping point.
- D. Assign a set of working times to the plant.
- E. Maintain shifts defining the times for starting and ending work.

**Answer: B,C,D**

Explanation:

To ensure precise scheduling during delivery scheduling, the settings should include:

A . Maintain the transit time in the route in hours and minutes: This allows the system to calculate the transportation time with precision.

B . Assign a set of working times to the plant: The working times of the plant determine when goods can be produced or prepared for shipping, impacting scheduling.

E . Assign a set of working times to the shipping point: The working times of the shipping point are crucial for determining when goods can be shipped, affecting delivery dates.

### **NEW QUESTION # 23**

You are using multiple address handling in a sales document. At which levels can you configure the address determination? Note: There are 2 correct answers to this question.

- A. Address usage of the business partner
- B. Partner determination procedure
- C. Generic partner function
- D. Origin and source of the partner function

**Answer: A,B**

Explanation:

In a sales document using multiple address handling, address determination can be configured at:

A . Address usage of the business partner: This determines how different addresses are used for the same business partner in various contexts.

D . Partner determination procedure: This includes the rules for determining which partners (and their associated addresses) are involved in a transaction.

### **NEW QUESTION # 24**

When you create a business partner, allocation of the business partner number is controlled by a number range assigned to which object?

- A. Account group
- B. Business partner grouping
- C. Business partner role
- D. Business partner category

**Answer: B**

Explanation:

Number ranges for business partner numbers are defined at the business partner grouping level, which determines how business partners are categorized and numbered in the system
