Latest Data-Architect Exam Pdf | Data-Architect Valid Exam Discount

Our team of professionals and experts has prepared Data-Architect vce dumps by keeping the vigilant eyes on the current exam information and exam requirements. In case you failed exam with our Data-Architect study guide we will get you 100% money back guarantee and you can contact our support if you have any questions about our Data-Architect Real Dumps. We will be your support when you need us anytime.

Salesforce Certified Data Architect Sample Questions (Q184-Q189):

NEW QUESTION # 184

Universal Containers (UC) has three systems: Salesforce, a cloud -based ERP system, and an on -premise Order Management System (OMS). An architect has been tasked with creating a solution that uses Salesforce as the system of record for Leads and the OMS as the system of record for Account and Contacts. UC wants Accounts and Contacts to be able to maintain their names in

each system (i.e., "John Doe" in the OMS and "Johnny Doe" in Salesforce), but wants to have a consolidated data store which links referenced records across the systems. What approach should an architect suggest so the requirements are met?

- A. Use the Streaming API to send Account and Contact data from Salesforce to the OMS.
- B. Implement an integration tool to send OMS Accounts and Contacts to Salesforce.
- **C. Implement a Master Data Management strategy to reconcile Leads, Accounts, and Contacts.**
- D. Have Salesforce poll the OMS nightly and bring in the desired Accounts and Contacts.

Answer: C

Explanation:

Implementing a Master Data Management strategy to reconcile Leads, Accounts, and Contacts is the approach that the architect should suggest so that the requirements are met for UC. A Master Data Management strategy can provide a consistent and unified view of data across multiple systems, by defining and enforcing rules for data quality, governance, and integration. A Master Data Management strategy can also handle complex scenarios where different systems have different systems of record for different entities or fields, and where data can be modified in different systems with different values. A Master Data Management strategy can also provide a consolidated data store that links referenced records across systems and enables cross-system reporting and analysis. The other options are not suitable or sufficient for meeting the requirements, as they would either not provide a consolidated data store, not handle different systems of record, or not allow data modification in different system

NEW QUESTION # 185

As part of a phased Salesforce rollout, there will be 3 deployments spread out over the year. The requirements have been carefully documented. Which two methods should an architect use to trace back configuration changes to the detailed requirements? Choose 2 answers

- A. Maintain a data dictionary with the justification for each field.
- B. Review the setup audit trail for configuration changes.
- **C. Use the Force.com IDE to save the metadata files in source control.**
- **D. Put the business purpose in the Description of each field.**

Answer: C,D

Explanation:

Option B is correct because putting the business purpose in the Description of each field is a method that an architect can use to trace back configuration changes to the detailed requirements¹. The Description of each field provides a brief explanation of what the field is used for and why it is needed². Option D is correct because using the Force.com IDE to save the metadata files in source control is another method that an architect can use to trace back configuration changes to the detailed requirements¹. The Force.com IDE is an integrated development environment that allows developers to work with Salesforce metadata files and Apex code³. Source control is a system that tracks and manages changes to code and configuration files⁴. Option A is not correct because reviewing the setup audit trail for configuration changes is not a method to trace back configuration changes to the detailed requirements, but a way to monitor and audit the changes made in the setup area. Option C is not correct because maintaining a data dictionary with the justification for each field is not a method to trace back configuration changes to the detailed requirements, but a document that provides information about the data entities and attributes in a system.

NEW QUESTION # 186

UC has one SF org (Org A) and recently acquired a secondary company with its own Salesforce org (Org B).

UC has decided to keep the orgs running separately but would like to bidirectionally share opportunities between the orgs in near-real time.

Which 3 options should a data architect recommend to share data between Org A and Org B?

Choose 3 answers.

- **A. Use Salesforce Connect and the cross-org adapter to visualize Opportunities into external objects**
- **B. Leverage middleware tools to bidirectionally send Opportunity data across orgs.**
- C. Install a 3rd party AppExchange tool to handle the data sharing
- D. Develop an Apex class that pushes opportunity data between orgs daily via the Apex schedule.
- **E. Leverage Heroku Connect and Heroku Postgres to bidirectionally sync Opportunities.**

Answer: A,B,E

Explanation:

Leveraging Heroku Connect and Heroku Postgres, middleware tools, or Salesforce Connect and the cross-org adapter are all viable options to share data between Org A and Org B in near-real time³. Installing a 3rd party AppExchange tool may not provide bidirectional sync or may have additional costs. Developing an Apex class that pushes opportunity data between orgs daily via the Apex schedule may not meet the near-real time requirement.

NEW QUESTION # 187

UC has a classic encryption for Custom fields and is leveraging weekly data reports for data backups. During the data validation of exported data UC discovered that encrypted field values are still being exported as part of data exported. What should a data architect recommend to make sure decrypted values are exported during data export?

- A. Create another field to copy data from encrypted field and use this field in export
- **B. Set up a custom profile for data migration user and assign view encrypted data.**
- C. Leverage Apex class to decrypt data before exporting it.
- D. Set a standard profile for Data Migration user, and assign view encrypted data

Answer: B

NEW QUESTION # 188

A large insurance provider is looking to implement Salesforce. The following exist.

1. Multiple channel for lead acquisition
2. Duplication leads across channels
3. Poor customer experience and higher costs

On analysis, it found that there are duplicate leads that are resulting to mitigate the issues?

- A. Build a custom solution to identify and merge duplicate leads.
- **B. Implement de-duplication strategy to prevent duplicate leads**
- C. Build process is manually search and merge duplicates.
- **D. Standard lead information across all channels.**
- **E. Implement third-party solution to clean and event lead data.**

Answer: B,D,E

NEW QUESTION # 189

.....

our experts have rewritten the textbooks according to the exam outline of Data-Architect, and have gathered all the key difficulties and made key notes, so that you can review them in a centralized manner. Experts also conducted authoritative interpretations of all incomprehensible knowledge points through examples and other methods. The expressions used in Data-Architect Learning Materials are very easy to understand. Even if you are an industry rookie, you can understand professional knowledge very easily. The Data-Architect training torrent will be the best study guide for you to obtain your certification.
