Dumps Salesforce AP-202 Download | Valid Test AP-202 Testking

PracticeVCE will provide you with actual B2B Commerce for Developers Accredited Professional (AP-202) exam questions in pdf to help you crack the Salesforce AP-202 exam. So, it will be a great benefit for you. If you want to dedicate your free time to preparing for the B2B Commerce for Developers Accredited Professional (AP-202) exam, you can check with the soft copy of pdf questions on your smart devices and study when you get time. On the other hand, if you want a hard copy, you can print B2B Commerce for Developers Accredited Professional (AP-202) exam questions.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q104-Q109):

NEW QUESTION # 104

Universal Containers (UC) needs to display data from standard objects (entities) in a different format than what comes with B2B Commerce out of the box. In doing this, what is one advantage of using the Lightning Data Service vs using a custom Controller class?

- A. The developer can read, create, or modify single records or metadata without writing Apex code.
- B. Lightning Data Service translates the developer's component implementation to a VisualForce page for backward compatibility.
- C. JavaScript proxies for transport objects are created in the developer's IDE automatically.
- D. There is a Visual Studio add-in that accelerates the layout process

Answer: A

Explanation:

Lightning Data Service (LDS) is a Salesforce UI API layer that empowers developers to perform CRUD operations and manage Salesforce data without the need for custom Apex controllers. LDS is designed to improve performance, user interface consistency, and developer productivity by handling data operations and sharing rules, thus reducing the need for server-side code. For more details, refer to the Salesforce documentation on Lightning Data Service: [Salesforce Lightning Data Service Documentation](#).

NEW QUESTION # 105

A developer needs to debug a flow tracing a single input in complete detail, watching all variable changes as the checkout process is executed. Which feature should the developer enable? ~.

- **A. Show execution details inline**
- B. Show the details of what's executed and render flow in Lightning Runtime
- C. Show the details of what's executed and render flow in Lightning Experience
- D. Add watch to variables

Answer: A

Explanation:

To debug a flow with detailed tracing of a single input, including watching all variable changes as the checkout process is executed, the developer should enable "Show execution details" (inline) within the Flow Debugger. This feature allows developers to see a step-by-step execution of the flow, including the values of variables at each step. This is crucial for understanding how data is being passed through the flow and for identifying any issues. Salesforce documentation on debugging flows provides more information on this feature: [Salesforce Flow Debugging Documentation](#).

NEW QUESTION # 106

Which template will correctly display the details message only when areDetailsVisible becomes true given the following code in a Lightning Web Component?

- A.
- B.
- **C.**
- D.

Answer: C

Explanation:

The template that will correctly display the details message only when areDetailsVisible becomes true given the following code in a Lightning Web Component is option C. Option C uses the `if:true` directive to conditionally render a template block based on the value of areDetailsVisible. If areDetailsVisible is true, the template block inside the `<template if:true={areDetailsVisible}>` tag will be rendered. Otherwise, it will be skipped. Option A is incorrect because it uses the `if:false` directive, which does the opposite of `if:true`. It renders the template block only when areDetailsVisible is false. Option B is incorrect because it uses an invalid syntax for the `if` directive. The `if` directive requires a colon (`:`) after the `if` keyword, not an equal sign (`=`). Option D is incorrect because it uses an invalid syntax for the template tag. The template tag requires a closing tag (`</template>`), not a self-closing tag (`<template/>`). Salesforce Lightning Web Components Developer Guide: Conditional Rendering, [Lightning Web Components Developer Guide: Template Syntax](#)

NEW QUESTION # 107

A developer is setting up a storefront from scratch. They need to create a storefront, push store sources, create buyer users, import products, and create and search index.

Which command allows the developer to accomplish this task?

- A. `sfdx commerce:store:create -store-name test-store`
- **B. `sfdx commerce:store:quickstart:setup -definitionfile store-scratch-def.json`**
- C. `sfdx commerce:store:open -store-name test-store`
- D. `sfdx commerce:store:quickstart:create -templatename 'b2c-lite-storefront'`

Answer: B

Explanation:

The `sfdx commerce:store:quickstart:setup` command allows the developer to set up a store from scratch using a definition file that specifies the store configuration. This command performs the following tasks:

Pushes the store sources to the scratch org

Creates a buyer user

Imports products

Creates a search index

Opens the store in a browser

The other options are not correct because:

A) `sfdx commerce:store:quickstart:create` only creates a community for the store, but does not perform the other tasks required to set up a store from scratch.

C) `sfdx commerce:store:create` creates and sets up a store, but does not use a definition file to specify the store configuration. Instead, it uses command-line flags to provide the store parameters.

D) `sfdx commerce:store:open` only opens an existing store in a browser, but does not create or set up a store from scratch.

store Commands
Build a B2B and B2B2C Commerce Store

NEW QUESTION # 108

The `ccUtil` apex class in Salesforce B2B Commerce provides numerous utility functions that can be leveraged in subscriber classes. What are two ways to check the input or return data of the Global API's? (2 answers)

- A. `ccrz.ccUtil.isNotEmpty(Map<String, Object>)` and `ccrz.ccUtil.isNotEmpty(List<Object>)`
- B. `ccrz.ccUtil.isEmpty(Map<String, Object>)` and `ccrz.ccUtil.isEmpty(List<Object>)`
- C. `ccrz.ccUtil.isValid(Map<String, Object>)` and `ccrz.ccUtil.isValid(List<Object>)`
- D. `ccrz.ccUtil.isInvalid(Map<String, Object>)` and `ccrz.ccUtil.isInvalid(List<Object>)`

Answer: A,B

Explanation:

The `ccUtil` apex class provides two methods to check the input or return data of the Global API's:

`ccrz.ccUtil.isNotEmpty(Map<String, Object>)` and `ccrz.ccUtil.isEmpty(Map<String, Object>)`. These methods return true if the map is not null and contains at least one entry, or if the map is null or empty, respectively. Similarly, `ccrz.ccUtil.isNotEmpty(List<Object>)` and `ccrz.ccUtil.isEmpty(List<Object>)` return true if the list is not null and contains at least one element, or if the list is null or empty, respectively. These methods are useful for validating the input parameters or the output results of the Global API's.

NEW QUESTION # 109

.....

PracticeVCE's braindumps provide you the gist of the entire syllabus in a specific set of questions and answers. These study questions are most likely to appear in the actual exam. The Certification exams are actually set randomly from the database of AP-202. Thus most of the questions are repeated in AP-202 Exam and our experts after studying the previous exam have sorted out the most important questions and prepared dumps out of them. Hence PracticeVCE's dumps are a special feast for all the exam takers and sure to bring them not only exam success but also maximum score.
