

# Test SCS-C02 Simulator Fee | Exam Questions SCS-C02 Vce

BONUS!!! Download part of PremiumVCEDump SCS-C02 dumps for free: [https://drive.google.com/open?id=1qcaOZYY6B0vzcBwnb-GE\\_1f314WsMNkC](https://drive.google.com/open?id=1qcaOZYY6B0vzcBwnb-GE_1f314WsMNkC)

Our company guarantees this pass rate from various aspects such as content and service on our SCS-C02 exam questions. We have hired the most authoritative professionals to compile the content Of the SCS-C02 study materials. And we offer 24/7 service online to help you on all kinds of the problems about the SCS-C02 learning guide. Of course, we also consider the needs of users, ourSCS-C02 exam questions hope to help every user realize their dreams.

## Amazon SCS-C02 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Identity and Access Management: The topic equips AWS Security specialists with skills to design, implement, and troubleshoot authentication and authorization mechanisms for AWS resources. By emphasizing secure identity management practices, this area addresses foundational competencies required for effective access control, a vital aspect of the certification exam.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Data Protection: AWS Security specialists learn to ensure data confidentiality and integrity for data in transit and at rest. Topics include lifecycle management of data at rest, credential protection, and cryptographic key management. These capabilities are central to managing sensitive data securely, reflecting the exam's focus on advanced data protection strategies.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Security Logging and Monitoring: This topic prepares AWS Security specialists to design and implement robust monitoring and alerting systems for addressing security events. It emphasizes troubleshooting logging solutions and analyzing logs to enhance threat visibility.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Infrastructure Security: Aspiring AWS Security specialists are trained to implement and troubleshoot security controls for edge services, networks, and compute workloads under this topic. Emphasis is placed on ensuring resilience and mitigating risks across AWS infrastructure. This section aligns closely with the exam's focus on safeguarding critical AWS services and environments.</li></ul>

## The Best Test SCS-C02 Simulator Fee Supply you Correct Exam Questions Vce for SCS-C02: AWS Certified Security - Specialty to Prepare easily

That's why it's indispensable to use AWS Certified Security - Specialty (SCS-C02) real exam dumps. PremiumVCEDump understands the significance of Updated Amazon SCS-C02 Questions, and we're committed to helping candidates clear tests in one

go. To help Amazon SCS-C02 test applicants prepare successfully in one go, PremiumVCEDump's SCS-C02 dumps are available in three formats: AWS Certified Security - Specialty (SCS-C02) web-based practice test, desktop SCS-C02 practice Exam software, and SCS-C02 dumps PDF.

## Amazon AWS Certified Security - Specialty Sample Questions (Q304-Q309):

### NEW QUESTION # 304

A security engineer needs to implement a solution to determine whether a company's Amazon EC2 instances are being used to mine cryptocurrency. The solution must provide notifications of cryptocurrency-related activity to an Amazon Simple Notification Service (Amazon SNS) topic.

Which solution will meet these requirements?

- A. Enable Amazon Inspector. Create an Amazon EventBridge rule to send alerts to the SNS topic when Amazon Inspector creates a finding that is associated with cryptocurrency-related activity.
- B. Enable VPC flow logs. Send the flow logs to an Amazon S3 bucket. Set up a query in Amazon Athena to detect when an EC2 instance queries a DNS domain name that is associated with cryptocurrency-related activity. Configure the Athena query to initiate alerts to the SNS topic.
- C. Create AWS Config custom rules by using Guard custom policy. Configure the AWS Config rules to detect when an EC2 instance queries a DNS domain name that is associated with cryptocurrency-related activity. Configure AWS Config to initiate alerts to the SNS topic.
- D. Enable Amazon GuardDuty. Create an Amazon EventBridge rule to send alerts to the SNS topic when GuardDuty creates a finding that is associated with cryptocurrency-related activity.

**Answer: D**

### NEW QUESTION # 305

A company's cloud operations team is responsible for building effective security for IAM cross-account access. The team asks a security engineer to help troubleshoot why some developers in the developer account (123456789012) in the developers group are not able to assume a cross-account role (ReadS3) into a production account (999999999999) to read the contents of an Amazon S3 bucket (productionapp). The two account policies are as follows:

Developer account 123456789012.

Developer group permissions:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": "sts:AssumeRole",
      "Resource": "arn:aws:iam::999999999999:role/ReadS3"
    }
  ]
}
```

Production account 999999999999:

Production account ReadS3 role policy:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": "s3:ListAllMyBuckets",
      "Resource": "*"
    },
    {
      "Effect": "Allow",
      "Action": [
        "s3:ListBucket",
        "s3:GetBucketLocation"
      ],
      "Resource": "*"
    }
  ]
}
```

Production account ReadS3 role policy - trust relationship:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Principal": {
        "AWS": "arn:aws:iam::888888888888:root"
      },
      "Action": "sts:AssumeRole",
      "Condition": {
        "BoolIfExists": {
          "aws:MultiFactorAuthPresent": "true"
        }
      }
    }
  ]
}
```

Which recommendations should the security engineer make to resolve this issue? (Select TWO.)

- A. Update the developer group permissions in the developer account to allow access to the productionapp S3 bucket.
- B. Ask the developers to change their password and use a different web browser.
- C. Update the trust relationship policy on the production account S3 role to allow the account number of the developer account.
- D. Ensure that developers are using multi-factor authentication (MFA) when they log in to their developer account as the developer role.
- E. Modify the production account ReadS3 role policy to allow the PutBucketPolicy action on the productionapp S3 bucket.

Answer: B,C

#### NEW QUESTION # 306

A company's on-premises networks are connected to VPCs using an IAM Direct Connect gateway. The company's on-premises application needs to stream data using an existing Amazon Kinesis Data Firehose delivery stream. The company's security policy requires that data be encrypted in transit using a private network.

How should the company meet these requirements?

- A. Configure an IAM policy to restrict access to Kinesis Data Firehose using a source IP condition. Configure the application to connect to the existing Firehose delivery stream.
- B. Peer the on-premises network with the Kinesis Data Firehose VPC using Direct Connect. Configure the application to connect to the existing Firehose delivery stream.
- C. Create a VPC endpoint for Kinesis Data Firehose. Configure the application to connect to the VPC endpoint.
- D. Create a new TLS certificate in IAM Certificate Manager (ACM). Create a public-facing Network Load Balancer (NLB) and select the newly created TLS certificate. Configure the NLB to forward all traffic to Kinesis Data Firehose. Configure the application to connect to the NLB.

**Answer: C**

Explanation:

Explanation

To stream data using an existing Amazon Kinesis Data Firehose delivery stream and encrypt it in transit using a private network, the company should do the following:

Create a VPC endpoint for Kinesis Data Firehose. This allows the company to use a private connection between their VPC and Kinesis Data Firehose without requiring an internet gateway or NAT device.

Configure the application to connect to the VPC endpoint. This allows the application to stream data using Kinesis Data Firehose over AWS PrivateLink, which encrypts all traffic with TLS.

### NEW QUESTION # 307

A company's developers are using AWS Lambda function URLs to invoke functions directly. The company must ensure that developers cannot configure or deploy unauthenticated functions in production accounts. The company wants to meet this requirement by using AWS Organizations. The solution must not require additional work for the developers.

Which solution will meet these requirements?

- A. Require the developers to configure all function URLs to support cross-origin resource sharing (CORS) when the functions are called from a different domain.
- B. Use SCPs to deny all `lambda:CreateFunctionUrlConfig` and `lambda:UpdateFunctionUrlConfig` actions that have a `lambda:FunctionUrlAuthType` condition key value of `NONE`.
- C. Use an AWS WAF delegated administrator account to view and block unauthenticated access to function URLs in production accounts, based on the OU of accounts that are using the functions.
- D. Use SCPs to allow all `lambda:CreateFunctionUrlConfig` and `lambda:UpdateFunctionUrlConfig` actions that have a `lambda:FunctionUrlAuthType` condition key value of `AWS_IAM`.

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To prevent developers from configuring unauthenticated Lambda function URLs, the most effective approach is to use Service Control Policies (SCPs) at the organizational level. By explicitly denying actions such as `lambda:CreateFunctionUrlConfig` and `lambda:UpdateFunctionUrlConfig` when the `lambda:FunctionUrlAuthType` is set to `NONE`, the organization ensures that only authenticated function URLs are deployed in production.

This method imposes no additional workload on developers and leverages AWS Organizations' SCPs to enforce centralized security policy - a recommended practice in the Identity and Access Management domain.

### NEW QUESTION # 308

A company stores sensitive documents in Amazon S3 by using server-side encryption with an IAM Key Management Service (IAM KMS) CMK. A new requirement mandates that the CMK that is used for these documents can be used only for S3 actions.

Which statement should the company add to the key policy to meet this requirement?

```
{
  "Effect": "Deny",
  "Principal": "*",
  "Action": "s3:*",
  "Resource": "*",
  "Condition": {
    "StringNotEquals": {
      "kms:ViaService": "kms.*amazonaws.com"
    }
  }
}
```

- A.

```
{
  "Effect": "Deny",
  "Principal": "*",
  "Action": "kms:*",
  "Resource": "*",
  "Condition": {
    "StringNotEquals": {
      "kms:CallerAccount": "s3.amazonaws.com"
    }
  }
}
```

- B. )

Answer: B

## NEW QUESTION # 309

.....

No need to go after substandard SCS-C02 brain dumps for exam preparation that has no credibility. They just make you confused and waste your precious time and money. Compare our content with other competitors like Pass4sure's dumps, you will find a clear difference in SCS-C02 material. Most of the content there does not correspond with the latest syllabus content. It also does not provide you the best quality. Likewise the exam collection's brain dumps are not sufficient to address all exam preparation needs.
