## CISSP Authentic Exam Hub & CISSP Reliable Braindumps Ppt

For customers who are bearing pressure of work or suffering from career crisis, CISSP learn tool of inferior quality will be detrimental to their life, render stagnancy or even cause loss of salary. So choosing appropriate CISSP test guide is important for you to pass the exam. One thing we are sure, that is our CISSP Certification material is reliable. With our high-accuracy CISSP test guide, our candidates can become sophisticated with the exam content. You only need to spend 20-30 hours practicing with our CISSP learn tool, passing the exam would be a piece of cake.

## ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q481-Q486):

### NEW QUESTION # 481

Which of the following kind of attacks uses e-mail or websites to solicit personal information by posing a trustworthy organization?

- A. Tailgating
- B. Pretexting
- C. Baiting
- **D. Phishing**

**Answer: D**

### NEW QUESTION # 482

Kerberos provides an integrity check service for messages between two entities through the use of:

- A. Tickets
- **B. A checksum**
- C. A trusted, third-party authentication server
- D. Credentials

**Answer: B**

Explanation:

A checksum that is derived from a Kerberos message is used to verify the integrity of the message. This checksum may be a message digest resulting from the application of a hash function to the message. At the receiving end of the transmission, the receiving party can calculate the message digest of the received message using the identical hash algorithm as the sender. Then the message digest calculated by the receiver can be compared with the message digest appended to the message by the sender. If the two message digests match, the message has not been modified en route, and its integrity has been preserved. For answers Credentials and Tickets are authenticators used in the process of granting user access to services on the network. Answer "A trusted, third-party authentication server" is the AS or authentication server that conducts the ticket-granting process.

### NEW QUESTION # 483

Which of the following is the name of an individual or group that is impacted by a change?

- A. Change agent
- B. Sponsor
- **C. Stakeholder**
- D. End User

**Answer: C**

### NEW QUESTION # 484

There is no way to completely abolish or avoid risks, you can only manage them. A risk free environment does not exist. If you have risks that have been identified, understood and evaluated to be acceptable in order to conduct business operations. What is this this approach to risk management called?

- A. Risk Transference
- B. Risk Mitigation
- C. Risk Avoidance
- **D. Risk Acceptance**

**Answer: D**

Explanation:

Risk management provides a mechanism to the organization to ensure that executive management knows current risks, and informed decisions can be made to use one of the risk management principles: risk avoidance, risk transfer, risk mitigation, or risk acceptance, Risk Acceptance is when the risk has been identified, understood and evaluated to be acceptable in order to conduct business operations. Acceptance goes hand-in-hand with mitigation but they're slightly different.

At the end of the day, there is always a particle of risk we must undertake to perform business in a complex computing world.

Whether it is operating a website, hosting a VPN connection or connections for employees to the open internet, there is risk.

Managers can either accept, avoid or transfer risk to another party. Either way, risk must be dealt with to conduct business operations.

The following answers are incorrect:

Risk Avoidance: Avoiding risk is when we avoid it altogether to deal with the risk. Whether it is by not hosting a website, not operating your own web proxy or any other computing task. Choosing not to perform the process is risk avoidance. This isn't correct because accepting risk is clearly not avoiding the risk.

Risk Transference: When we transfer risk, we pay someone else to undertake the risk on our behalf so that we may conduct operations, benefit from the risk but don't undertake the risky

operation ourselves. Accepting the risk is different from transferring the risk to another organization apart from your own in that you're not accepting it at all. Someone else does for you. Risk Mitigation: Mitigating risk means you accept it AND work around the risk to benefit from it. A good example could be a locked down web server or firewall. You benefit from the service they provide but mitigate risks involved by technical measures. Mitigation is incorrect because it goes beyond merely accepting the risk by mitigating the risk to make it more acceptable.

### NEW QUESTION # 485

Which of the following is an IDS that acquires data and defines a "normal" usage profile for the network or host?

- A. dynamical anomaly-based IDS
- B. inferential anomaly-based IDS
- C. Statistical Anomaly-Based IDS
- D. Signature-Based IDS

**Answer: C**

Explanation:

Explanation/Reference:

Explanation:

An IDS which is anomaly based monitors network traffic and compares it against an established baseline, which identifies what is "normal" for that network, and the alerts the relevant party when traffic is detected which is significantly different to the baseline.

Incorrect Answers:

B: A signature based IDS monitors packets and compares them against a database of signatures or attributes from known malicious threats.

C: Dynamical anomaly-based IDS is not a valid IDS type.

D: Inferential anomaly-based IDS is not a valid IDS type.
