Dear, do you tired of the study and preparation for the Information-Technology-Management actual test? Here, we advise you to try the WGU Information-Technology-Management online test which can simulate the real test environment and give an excellent study experience. You see, you can set the test time and get the score immediately after each test by using Information-Technology-Management Online Test engine. With the interactive and intelligent functions of GetValidTest Information-Technology-Management online test, you will be interested in the study. Besides, the valid questions & verified answers can also ensure the 100% pass rate.

We are steely to be the first-rank Information-Technology-Management practice materials in this area. On your way to success, we are the strong backups you can depend on. We have confidence that your career will be in the ascendant with the passing certificate of the Information-Technology-Management Study Guide as a beginning. With the unbeatable high pass rate as 98% to 100%, no one can do this job better than us to help you pass the Information-Technology-Management exam. Just give you a chance to success!

Information-Technology-Management Accurate Test, Latest Information-Technology-Management Exam Pdf

In addition to the advantages of high quality, our Information-Technology-Management exam questions also provide various versions. In order to meet your personal habits, you can freely choose any version of our Information-Technology-Management study materials within PDF, APP or PC version. Among them, the PDF version is most suitable for candidates who prefer paper materials, because it supports printing. And our PDF version of the Information-Technology-Management training guide can be carried with you for it takes on place.

WGU Information Technology Management QGC1 Sample Questions (Q53-Q58):

NEW QUESTION # 53

What is a benefit of globalization?

- A. Increased competition
- **B. Access to new talent pools**
- C. Costs associated with operating in new geographic areas
- D. Adherence to regulatory requirements

Answer: B

Explanation:

* Definition of Globalization Benefits:

* Globalization allows organizations to expand their operations globally, gaining access to diverse markets and resources, including new talent pools from different regions.

* Key Benefit:

* Accessing new talent pools enables businesses to tap into a diverse workforce with varied skills, fostering innovation and improving operational efficiency.

* Incorrect Options Analysis:

* A. Costs associated with new geographic areas: This is a challenge, not a benefit.

* B. Adherence to regulatory requirements: This is an obligation, not a benefit.

* C. Increased competition: This is a consequence of globalization, but not a direct benefit.

References and Documents of Information Technology Management:

* "Global Workforce Management" (Harvard Business Review).

* ITIL Global IT Strategy Framework (Axelos).

NEW QUESTION # 54

Which type of computer is designed for high-volume data processing and enterprise-level tasks?

- A. Workstation
- B. Desktop
- C. Laptop
- **D. Mainframe**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A mainframe computer is a large, powerful system designed for high-volume, mission-critical data processing and enterprise-level tasks. It is typically used by large organizations such as banks, insurance companies, government agencies, and large enterprises.

Core characteristics aligned with IT management fundamentals:

Mainframes support thousands of concurrent users and very large transaction volumes (e.g., processing credit card transactions, airline reservations, payroll).

They provide high levels of reliability, availability, and security, often running 24/7 with minimal downtime.

They are optimized for throughput and I/O-intensive operations, rather than just raw personal computing speed.

Why the other options are incorrect:

B. Desktop - Designed for individual end users performing personal productivity tasks, development work, or office activities; not suitable for massive centralized transaction processing across an enterprise.

C. Laptop - Portable computer for individual users; optimized for mobility, not for large-scale enterprise transaction processing or data handling.

D. Workstation - A powerful single-user machine typically used for tasks like CAD, 3D modeling, or scientific computing; while more powerful than a typical desktop, it is not intended for the centralized, high-volume, multi-user data processing workloads that mainframes handle.

Therefore, Mainframe is the correct answer since it is the class of computer specifically designed for enterprise-level, high-volume data processing.

NEW QUESTION # 55

What is the bullwhip effect?

- A. The optimization resulting from high visibility of all areas up and down the supply chain

- B. The process by which products in a network increase in value to users as the number of users increases
- **C. The process of stockpiling excess inventory due to incorrect product demand communication between the supplier and its partners**
- D. A cultural trend that places value on an individual's ability to be a creator of things as well as a consumer of things

Answer: C

Explanation:

* Understanding the Bullwhip Effect:

* The bullwhip effect occurs when small fluctuations in consumer demand lead to exaggerated changes in inventory levels up the supply chain.

* Miscommunication or poor demand forecasting amplifies these effects, causing overproduction or stockpiling.

* Why Other Options Are Incorrect:

* Option B: Refers to supply chain optimization, which is unrelated to the bullwhip effect.

* Option C: Describes the maker movement, not the bullwhip effect.

* Option D: Describes the network effect, unrelated to supply chain dynamics.

References:

* "The Bullwhip Effect in Supply Chain Management" - MIT Sloan

* Supply Chain Dynamics and Bullwhip Effect - Harvard Business Review

NEW QUESTION # 56

Which type of software saves information if there is a system error?

- A. Disk optimization
- **B. Crash-proof**
- C. Data encryption
- D. Uninstaller

Answer: B

Explanation:

Crash-proof software prevents data loss during system failures by automatically saving information or maintaining system stability. Examples include backup solutions and automatic recovery features in operating systems.

:

Stallings, W. (2018). Operating Systems: Internals and Design Principles. Pearson.

NEW QUESTION # 57

Which feature makes mobile operating systems different from desktop operating systems in business use?

- A. Mobile operating systems support complex, multi-user access across enterprise domains.
- B. Mobile operating systems enable virtualization of enterprise server environments.
- C. Mobile operating systems include advanced tools for high-end peripheral hardware.
- **D. Mobile operating systems function efficiently on battery-powered, touchscreen devices.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Mobile operating systems are specifically designed to run on battery-powered, handheld, touchscreen devices such as smartphones and tablets. Their design priorities differ from desktop operating systems, with emphasis on:

Power efficiency to extend battery life

Touchscreen input, including gestures such as tapping, swiping, and pinching
 Lightweight resource usage (CPU, memory, storage)
 Suitable for mobile hardware
 Wireless connectivity (Wi-Fi, cellular, Bluetooth, GPS) as core capabilities
 App-centric user interface, optimized for small screens and mobile workflows
 These characteristics make mobile operating systems particularly suited for on-the-go business use, enabling activities like email, messaging, collaboration apps, field data entry, and access to cloud services from anywhere.

Why the other options are incorrect:

A. Complex, multi-user access across enterprise domains - This is traditionally more associated with desktop operating systems (e.g., Windows with Active Directory domains) used in corporate environments.

B . Advanced tools for high-end peripheral hardware - Desktop OSs are typically stronger here, supporting devices like industrial printers, specialized input devices, and complex hardware configurations.

C . Virtualization of enterprise server environments - This is a feature typically associated with server and desktop operating systems (e.g., hypervisors and server OSs), not mobile OSs.

Therefore, the feature that best distinguishes mobile operating systems in business use is that they function efficiently on battery-powered, touchscreen devices.
