

# Use Real 3V0-24.25 Dumps Guaranteed Success

2026 Latest Prep4SureReview 3V0-24.25 PDF Dumps and 3V0-24.25 Exam Engine Free Share: <https://drive.google.com/open?id=1TuN6r9aehI47deSL4Dxb2S7L6w-c-0Mn>

It is known to us that our 3V0-24.25 learning dumps have been keeping a high pass rate all the time. There is no doubt that it must be due to the high quality of our study materials. It is a matter of common sense that pass rate is the most important standard to testify the 3V0-24.25 training files. The high pass rate of our study materials means that our products are very effective and useful for all people to pass their exam and get the related certification. So if you buy the 3V0-24.25 study questions from our company, you will get the certification in a shorter time.

## VMware 3V0-24.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>IT Architectures, Technologies, Standards: This section covers the differentiation between VMs and containers, helping determine the appropriate compute model. It also includes understanding Kubernetes architecture, networking, storage, service mesh, Helm, and reference architectures for VKS deployments.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Install, Configure, Administrate the VMware Solution: Includes creating and managing Supervisor clusters, namespaces, zones, workloads, and add-on services. Also covers provisioning, scaling, updating VKS clusters, autoscalers, storage strategies, workload deployments, backup</li><li>restore, and editing YAML configurations.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>VMware Products and Solutions: Focuses on configuring vSphere Supervisor capabilities, networking, storage, identity, and access for Kubernetes clusters. It also covers managing Kubernetes releases, CNIs, NSX networking objects, TLS certificates, and securing VKS clusters.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Plan and Design the VMware Solution: Covers evaluating the impact of load balancer sizing, namespace network options, and vSphere namespace architecture. It includes planning processes for enabling Supervisor clusters and implementing service mesh.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Troubleshoot and optimize the VMware Solution: Focuses on diagnosing and resolving provisioning, connectivity, namespace, VM class, storage, networking, container, registry, and CA errors. It also includes recovering failed upgrades and optimizing cluster performance using monitoring and scaling tools.</li></ul>

## Test 3V0-24.25 Simulator Free - 3V0-24.25 Study Material

What is the measure of competence? Of course, most companies will judge your level according to the number of qualifications you have obtained. It may not be comprehensive, but passing the qualifying exam is a pretty straightforward way to hire an employer. Our 3V0-24.25 exam practice questions on the market this recruitment phenomenon, tailored for the user the fast pass the examination method of study, make the need to get a good job have enough leverage to compete with other candidates. The quality

of our 3V0-24.25 learning guide is absolutely superior, which can be reflected from the annual high pass rate.

## VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Sample Questions (Q59-Q64):

### NEW QUESTION # 59

Which feature in VMware vSphere Kubernetes Service (VKS) provides vSphere storage policy integration that supports provisioning persistent volumes and their backing virtual disks?

- A. Cloud storage implementation
- B. Cloud storage provider
- C. vSphere Cloud Native Storage (CNS)
- D. Container Storage Interface (CSI)

**Answer: C**

Explanation:

VCF 9.0 describes Cloud Native Storage (CNS) on vCenter as the component that implements "provisioning and lifecycle operations for persistent volumes." When provisioning persistent volumes, CNS "interacts with the vSphere First Class Disk functionality to create virtual disks that back the volumes," and it

"communicates with Storage Policy Based Management to guarantee a required level of service to the disks." This is exactly the storage-policy-to-backed-virtual-disk relationship the question is testing: storage policies (via policy-based management) define requirements, and CNS is the vCenter-side service that applies those requirements while creating and managing the backing storage objects.

In contrast, CSI (including Supervisor CNS-CSI and VKS pvCSI) is the Kubernetes-facing interface/driver used to request and consume storage, but it does not "provide" the vSphere storage policy system; rather, it relies on CNS/CNS-CSI and vCenter services to fulfill provisioning requests. Therefore, vSphere Cloud Native Storage (CNS) is the correct choice.

### NEW QUESTION # 60

Which two capabilities are standard within a service mesh? (Choose two.)

- A. Multi-cluster backup and restore
- B. Cluster conformance validation
- C. Advanced container runtime
- D. Connection encryption
- E. Service discovery

**Answer: D,E**

Explanation:

Service mesh technology, such as Istio integrated within VMware Cloud Foundation (VCF) 9.0 and vSphere Kubernetes Service (VKS), is designed to solve the complexities of microservices communication. Two of the most fundamental capabilities provided by a service mesh are Service discovery and Connection encryption

. In a dynamic Kubernetes environment where pods are frequently created and destroyed, Service discovery allows microservices to locate and communicate with each other automatically without requiring hardcoded IP addresses or manual configuration changes. The service mesh control plane maintains a real-time registry of all active service instances and their locations.

Secondly, Connection encryption is a pillar of the "Zero Trust" security model implemented in VCF 9.0.

By utilizing a sidecar proxy (like Envoy) deployed alongside every container, the service mesh automatically manages mutual TLS (mTLS) for all inter-service traffic. This ensures that data in transit is encrypted and that services can cryptographically verify the identity of their peers before establishing a connection. While capabilities like backup/restore (Option D) and container runtimes (Option A) are critical components of the broader VCF platform (handled by Velero and containerd respectively), they are not functions of the service mesh itself. The service mesh specifically focuses on the "Layer 7" networking aspects-observability, reliability, and security-of the application traffic, making service discovery and encryption its core functional requirements.

### NEW QUESTION # 61

A VI Administrator is managing the lifecycle of VM images used by the VM Service. A new corporate standard requires that all Linux VMs deployed via kubectl must use the hardened image corp-linux- v2.ova.

The administrator has uploaded the new OVA to the Corporate-Images Content Library.

How can the administrator ensure that developers can immediately begin deploying VMs using this new image name in their YAML? (Select all that apply.)

- A. The administrator must create a "VM Image" custom resource object in Kubernetes mapping the OVA UUID to a name.
- **B. Ensure the Corporate-Images Content Library is assigned to the developers' vSphere Namespace.**
- C. The developers must change the kind in their YAML to VirtualMachineImage.
- D. The administrator must manually restart the wcp-vmop-controller pod on the Supervisor to recognize the new image.
- **E. The VM Service automatically syncs and discovers new images in assigned libraries; the developers can reference corp-linux-v2 in the spec.imageName field once the sync completes.**

Answer: B,E

**NEW QUESTION # 62**

An administrator is tasked to protect a VKS cluster at a point in time. To satisfy the request, the administrator creates a pre-provisioned snapshot of the target cluster.

Drag and drop the four configuration tasks into the correct order from "Configuration Steps" on the left and place them into the "Configuration Order" on the right. (Choose four.)

Answer:

Explanation:

Explanation:

Configuration Order (in order):

- \* Verify the name of the original VolumeSnapshot object in the Supervisor.
- \* Create a VolumeSnapshotContent object.
- \* Create a VolumeSnapshot object.
- \* Verify that the VolumeSnapshot is marked with ReadyToUse as true.

Pre-provisioned snapshot workflow means the snapshot already exists at the Supervisor/storage layer, and you are "importing" it into Kubernetes by creating the Kubernetes objects that reference it. That's why the first step is to identify/verify the exact snapshot name as it exists in the Supervisor context - this is the authoritative identifier you must point to when you create Kubernetes snapshot metadata. Next, you create the VolumeSnapshotContent object, which represents the actual snapshot on the storage backend and includes the handle/reference to that pre-existing snapshot. With the content object in place, you then create the VolumeSnapshot object, which is the user-facing Kubernetes object (namespaced) that binds to the pre-provisioned VolumeSnapshotContent (either explicitly or via binding rules). Finally, you validate the outcome by checking that the VolumeSnapshot shows ReadyToUse: true, confirming the binding succeeded and Kubernetes can use the snapshot for restore/clone workflows.

**NEW QUESTION # 63**

Drag and drop the three features into the correct order from Possible Features list on the left and place them into the Provided by Service Mesh on the right side. (Choose three.)

Possible Features

Provided by Service Mesh

Federation
Autoscaling
Graphical User Interface
Application backup
Database connection management
Observability

Answer:

Explanation:

Answer Area
Federation
Graphical User Interface
Observability

- 1 - Federation
- 2 - Graphical User Interface
- 3 - Observability

NEW QUESTION # 64

.....

If candidates are going to buy 3V0-24.25 test dumps, they may consider the problem of the fund safety. If you are thinking the same question like this, our company will eradicate your worries. We choose the international third party to ensure the safety of the fund. The 3V0-24.25 Test Dumps are effective and conclusive, you just need to use the least time to pass it. If you choose us, it means you choose the pass.
