NEW QUESTION # 25
An Engineer wants to filter a csvList value according to a dynamic value saved under the test context key.
Which three values would save the test context key? (Choose three.)

- A. Get csvList.value where csvList.value equals ${test} [as value]
- B. Get csvList.value where csvList.value equals test [from previous tasks]
- C. Get csvList.value where csvList.value equals ${test} [from previous tasks]
- D. Get csvList.value where csvList.value equals test [as value]
- E. Get csvList.value where csvList.value equals test {} [from previous tasks]

Answer: A,B,C

NEW QUESTION # 26
What are three different loop types in a playbook? (Choose three.)

- A. For-each
- B. Conditional
- C. Automation
- D. Built-in
- E. Data collection

Answer: A,B,E

NEW QUESTION # 27
Where is a custom layout for an incident configured?.

- A. Incident type.
- B. Integration instance settings.
- C. Pre-process rule.
- D. Incident playbook.

Answer: A

Explanation:
The Admin Guide states that layouts-representing how analysts view incident data, evidence, fields, and work plans-are attached directly to incident types. When configuring an incident type, the administrator can specify the layout for the "New," "Editing," and "Preview" modes. This ensures consistent presentation of data across the SOC, tailored to each use case (e.g., phishing, endpoint alerts, malware investigations).

Pre-process rules (option A) operate before incident creation and do not control the user interface layout.
Incident playbooks (option B) automate response actions but have no effect on how the incident UI is presented. Integration instance settings (option C) define connection details and ingestion parameters but do not control UI layouts.
Only theIncident Type configuration pageincludes fields for selecting or assigning custom layouts. This aligns with XSOAR's design principle: incident types define schema, workflows, and UI behavior, including which layout is displayed to analysts.
Thus, the correct answer isD, as incident layouts are configured and bound within theIncident Typesettings.

NEW QUESTION # 28

Which two input requirements are needed to train a machine learning model? (Choose two.)

- A. Incident Field
- B. Incident Type
- C. Verdict Label
- D. 3000 Incidents

Answer: A,B
