SPLK-1004 actual test & SPLK-1004 pass for sure & SPLK-1004 test guide

It is well acknowledged that people who have a chance to participate in the simulation for the real test, they must have a fantastic advantage over other people to get good grade in the exam. Now, it is so lucky for you to meet this opportunity once in a blue .We

offer you the simulation test with the App version of our SPLK-1004 preparation test, in order to let you be familiar with the environment of test as soon as possible. Under the help of the real SPLK-1004 test simulation, you can have a good command of key points which are more likely to be tested in the real test. Therefore that adds more confidence for you to make a full preparation of the upcoming SPLK-1004 Exam. In addition, since you can experience the process of SPLK-1004 the simulation test, you will feel less pressure about the approaching exam. It sounds wonderful, right? Of course, it is. So why not have a try? We promise you will enjoy this study.

Splunk Core Certified Advanced Power User Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which function of the stats command creates a multivalue entry?

- A. makemv
- B. eval
- C. list
- D. mvcombine

Answer: C

Explanation:

The list function of the stats command creates a multivalue entry, combining multiple occurrences of a field into a single multivalue field.

NEW QUESTION # 61

Which of the following statements is correct regarding bloom filters?

- A. Each bucket uses a unique hashing algorithm to create its bloom filter.
- B. The bloom filter contains trinary values: 0, 1, and 2.
- C. Hot buckets have no bloom filters as their contents are always changing.
- D. Bloom filters could return false positives or false negatives.

Answer: C

Explanation:

Comprehensive and Detailed Step by Step Explanation:

The correct statement about bloom filters in Splunk is:

Copy

1

Hot buckets have no bloom filters as their contents are always changing.

Here's why this is correct:

* Bloom Filters: Bloom filters are data structures used by Splunk to quickly determine whether a specific value exists in a bucket. They are designed for cold and warm buckets where the data is static.

* Hot Buckets: Hot buckets contain actively ingested data, which is constantly changing. Since bloom filters are precomputed and immutable, they cannot be applied to hot buckets.

Other options explained:

* Option B: Incorrect because bloom filters can only return false positives (indicating a value might exist when it doesn't), but they never return false negatives.

* Option C: Incorrect because all buckets use the same hashing algorithm to create bloom filters.

* Option D: Incorrect because bloom filters only contain binary values (0 or 1), not trinary values.

NEW QUESTION # 62

Which commands should be used in place of a subsearch if possible?

- A. mvexpand and/or where

- B. stats and/or eval
- C. untable and/or xyseries
- D. bin and/or where

Answer: B

Explanation:

stats and eval are recommended over subsearches because they are more efficient and scalable. Subsearches can be slow and resource-intensive, whereas stats aggregates data, and eval performs calculations within the search.

The stats and eval commands should be used instead of subsearches whenever possible because subsearches have performance limitations. They return only a maximum of 10,000 results or execute within 60 seconds by default, which may cause incomplete results. Using stats allows aggregation of large datasets efficiently, while eval can manipulate field values within a search rather than relying on subsearches.

NEW QUESTION # 63

What function can be used as an alternative to coalesce to return the first value from a list of fields that is not null?

- A. mvzip
- B. case
- C. bin
- D. exact

Answer: B

Explanation:

Comprehensive and Detailed Step by Step Explanation:

The case function can be used as an alternative to coalesce to return the first non-null value. While coalesce (field1, field2, field3) will return the first non-null value, case(condition1, value1, condition2, value2, ...) allows more flexibility by evaluating conditions.

Reference: Splunk Documentation - case Function

NEW QUESTION # 64

Which of the following is not a common default time field?

- A. date_day
- B. date_zone
- C. date_year
- D. date_minute

Answer: B

Explanation:

Fields like date_minute, date_year, and date_day are common default time fields in Splunk, while date_zone is not typically a default field for time-related data.

NEW QUESTION # 65

.....

Although the SPLK-1004 certificate is good, people who can successfully obtain each year are rare, and the difficulty of the SPLK-1004 exam and the pressure of study usually make the students feel discouraged. However, for us, these will no longer be a problem. In the past few years, our team has ushered in hundreds of industry experts, experienced numerous challenges day and night, and finally formed complete learning products--SPLK-1004 Exam Torrent, which is tailor-made for students who want to obtain the SPLK-1004 certificate.
