DP-300 Prüfungsressourcen: Administering Relational Databases on Microsoft Azure & DP-300 Reale Fragen

Möchten Sie die nur mit die Hälfte Zeit und Energie bestehen? Dann wählen Sie EchteFrage. Nach mehrjährigen Bemühungen ist die Bestehensquote von der Webseite EchteFrage in der ganzen Welt am höchsten. Wenn Sie die Genauigkeit der Fragenkataloge zur Microsoft DP-300 Zertifizierungsprüfung aus EchteFrage prüfen möchten, können Sie ein paar Exam Fragen auf der Webseite EchteFrage herunterladen, damit bestätigen Sie Ihre Wahl.

Microsoft Administering Relational Databases on Microsoft Azure DP-300 Prüfungsfragen mit Lösungen (Q49-Q54):

49. Frage

You have an Azure subscription that is linked to an Azure AD tenant named contoso.com. The subscription contains an Azure SQL database named SQL 1 and an Azure web named app1. App1 has the managed identity feature enabled.

You need to create a new database user for app1.

How should you complete the Transact-SQL statement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

CREATE USER [App1] FROM login

[App1]
[Contoso\app1]
[App1@contoso.com]

login
Windows
EXTERNAL PROVIDER

Microsoft

Antwort:

Begründung:

CREATE USER [App1] FROM login

[App1]
[Contoso\app1]
[App1@contoso.com]

login
Windows
EXTERNAL PROVIDER

Microsoft

Explanation

CREATE USER [App1] FROM login

[App1]
[Contoso\app1]
[App1@contoso.com]

login
Windows
EXTERNAL PROVIDER

Microsoft

50. Frage

You have an Azure SQL database.

You discover that the plan cache is full of compiled plans that were used only once.

You run the select * from sys.database_scoped_configurations Transact-SQL command and receive the results shown in the following table.

configuration_id	name	value	is_value_default
1	LEGACY_CARDINALITY_ESTIMATION	0	1
2	QUERY_OPTIMIZER_HOTFIXES	0	1
3	OPTIMIZE_FOR_AD_HOC_WORKLOADS	0	1
4	ACCELERATED_PLAN_FORCING	1	1

You need relieve the memory pressure.
What should you configure?

- A. OPTIMIZE_FOR_AD_HOC_WORKLOADS
- B. LEGACY_CARDINALITY_ESTIMATION
- C. ACCELERATED_PLAN_FORCING
- D. QUERY_OPTIMIZER_HOTFIXES

Antwort: A

Begründung:

OPTIMIZE_FOR_AD_HOC_WORKLOADS = { ON | OFF }

Enables or disables a compiled plan stub to be stored in cache when a batch is compiled for the first time. The default is OFF. Once the database scoped configuration OPTIMIZE_FOR_AD_HOC_WORKLOADS is enabled for a database, a compiled plan stub will be stored in cache when a batch is compiled for the first time.

Plan stubs have a smaller memory footprint compared to the size of the full compiled plan.

Incorrect Answers:

A: LEGACY_CARDINALITY_ESTIMATION = { ON | OFF | PRIMARY }

Enables you to set the query optimizer cardinality estimation model to the SQL Server 2012 and earlier version independent of the compatibility level of the database. The default is OFF, which sets the query optimizer cardinality estimation model based on the compatibility level of the database.

B: QUERY_OPTIMIZER_HOTFIXES = { ON | OFF | PRIMARY }

Enables or disables query optimization hotfixes regardless of the compatibility level of the database. The default is OFF, which disables query optimization hotfixes that were released after the highest available compatibility level was introduced for a specific version (post-RTM).

51. Frage

You have an Azure SQL database named DB1.

You have 10 Azure virtual machines that connect to a virtual network subnet named Subnet 1.

You need to implement a database-level firewall that meets the following requirements:

- * Ensures that only the 10 virtual machines can access DB1
- * Follows the principle of least privilege

How should you configure the firewall rule, and how should you establish network connectivity from the virtual machines to DB1?

To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Firewall rule: Add your client IP address.
Add your client IP address.
Allow Azure services and resources to access DB1.
Allow traffic from a specific virtual network.

Network connectivity: Create a private endpoint.
Assign static public IP addresses to the virtual machines.
Create a private endpoint.
Create a service endpoint.

Antwort:

Begründung:

Answer Area

Firewall rule:
Add your client IPv4 address.
Allow Azure services and resources to access DB1.
Allow traffic from a specific virtual network.

Network connectivity:
Assign static public IP addresses to the virtual machines.
Create a private endpoint.
Create a service endpoint.

Explanation:

Answer Area

Firewall rule:
Network connectivity:
Microsoft

52. Frage

You have a burstable Azure virtual machine named VMI that hosts an instance of Microsoft SQL Server.

You need to attach an Azure ultra disk to VMI. The solution must minimize downtime on VMI.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Attach the ultra disk.

Stop and deallocate VM1.

Set Enable Ultra disk compatibility to **Yes**.

Resize VM1.

Start VM1.

Answer Area

Microsoft

Antwort:

Begründung:

Actions

Attach the ultra disk.

Stop and deallocate VM1.

Set Enable Ultra disk compatibility to **Yes**.

Resize VM1.

Start VM1.

Answer Area

Stop and deallocate VM1.

Attach the ultra disk.

Set Enable Ultra disk compatibility to **Yes**.

Resize VM1.

Start VM1.

Explanation

Answer Area

Microsoft

- 1 Stop and deallocate VM1.
- 2 Attach the ultra disk.
- 3 Set Enable Ultra disk compatibility to **Yes**.
- 4 Resize VM1.
- 5 Start VM1.

53. Frage

You have an Azure SQL database named DB1 that contains a table named Orders. The Orders table contains a row for each sales order. Each sales order includes the name of the user who placed the order.

You need to implement row-level security (RLS). The solution must ensure that the users can view only their respective sales orders. What should you include in the solution? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Create:

- A materialized view in DB1
- A security policy in the Orders table
- Database scoped credentials in DB1

Control access to the rows by using:

- A masking rule
- A table-valued function
- The CONTAINS predicate

Antwort:

Begründung:

Create:

- A materialized view in DB1
- A security policy in the Orders table
- Database scoped credentials in DB1

Control access to the rows by using:

- A masking rule
- A table-valued function
- The CONTAINS predicate

Explanation

Create:

- A materialized view in DB1
- A security policy in the Orders table
- Database scoped credentials in DB1

Control access to the rows by using:

- A masking rule
- A table-valued function
- The CONTAINS predicate
