Microsoft AZ-801 (Configuring Windows Server Hybrid Advanced Services) Certification Exam is an advanced-level exam designed to evaluate the candidate's knowledge and skills in configuring and managing hybrid environments with Windows Server. AZ-801 Exam is intended for IT professionals who have experience in managing Windows Server and Azure services and want to advance their careers in cloud computing.

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q205-Q210):

NEW QUESTION # 205

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a failover cluster named Cluster1 that hosts an application named App1.

The General tab in App1 Properties is shown in the General exhibit. (Click the General tab.)

The Failover tab in App1 Properties is shown in the Failover exhibit. (Click the Failover tab.)

Server1 shuts down unexpectedly.

You need to ensure that when you start Server1, App1 continues to run on Server2.

Solution: From the Failover settings, you select Prevent failback.

Does this meet the goal?

- A. No
- B. Yes

Answer: B

Explanation:

The Prevent failback setting will prevent the cluster failing back to Server1.

NEW QUESTION # 206

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains servers that run Windows Server as shown in the following table.

Server1 has the connection security rules shown in the following table.

Server2 has the connection security rules shown in the following table.

.

□

Answer:

□ Explanation:

□

NEW QUESTION # 207

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains a print server named Server1. All printers are deployed to users by using a Group Policy Object (GPO) named GPO1.

You deploy a new server named Server2.

You need to decommission Server1. The solution must meet the following requirements:

* Migrate the shared printers to Server2 by using the Printer Migration Wizard.

* Ensure that the users use the printers on Server2.

* Minimize downtime for the users.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

□

Answer:

Explanation:
